AMENDMENT TO SENATE BILL 1585

AMENDMENT NO. ______. Amend Senate Bill 1585, AS AMENDED, by replacing everything after the enacting clause with the following:

“Section 1. Findings.

(a) In 2011, the General Assembly encouraged and enabled the State's largest electric utilities to undertake substantial investment to refurbish, rebuild, modernize, and expand Illinois' century-old electric grid. Among those investments were the deployment of a smart grid and advanced metering infrastructure platform that would be accessible to all retail customers through new, digital smart meters. This investment, now well underway, not only allows utilities to continue to provide safe, reliable, and affordable service to the State's current and future utility customers, but also empowers the citizens of this State to directly access and participate in the rapidly emerging clean energy economy while...
also presenting them with unprecedented choices in their source of energy supply and pricing.

To ensure that the State and its citizens, including low-income citizens, are equipped to enjoy the opportunities and benefits of the smart grid and evolving clean energy marketplace, the General Assembly finds and declares that Illinois should continue in its efforts to build the grid of the future using the smart grid and advanced metering infrastructure platform, as well as maximize the impact of the State's existing energy efficiency and renewable energy portfolio standards. Specifically, the Generally Assembly finds that:

(1) the State should encourage the adoption and deployment of cost-effective distributed energy resource technologies and devices, such as photovoltaics, which can encourage private investment in renewable energy resources, stimulate economic growth, enhance the continued diversification of Illinois' energy resource mix, and protect the Illinois environment;

(2) the State's existing energy efficiency standard should be updated to ensure that customers continue to realize increased value, to incorporate and optimize measures enabled by the smart grid, including voltage optimization measures, and to provide incentives for electric utilities to achieve the energy savings goals; and

(3) the State's electric utilities should initiate
programs to study the benefits of smart-grid enabled
technologies, including, but not limited to, deploying
microgrids and electric vehicle charging stations. Such
programs are not required to be cost effective so long as a
goal of the program is to analyze cost effectiveness. The
costs to implement, manage, and analyze such programs shall
be recovered through delivery service rates.

(b) The General Assembly further finds that the expansion
of distributed generation technologies and devices across the
State necessarily disrupts existing electricity generation and
distribution models and frameworks, including related rate and
tariff schedules, which can lead to inequitable charges,
especially for low-income customers who often encounter the
most substantial obstacles to adopting costly distributed
generation technologies and devices. As a result, the General
Assembly finds that low-income customers should be included
within the State's efforts to expand the use of distributed
generation technologies and devices. To address these issues,
electric utilities should also be permitted to file revised
tariffs related to implementing low-income programs,
demand-based delivery services charges, and unbundling
supply-related charges. These changes should be designed to
ensure both an equitable allocation of costs so that no
customers have to pay more than their fair share of these costs
and that all costs are recovered, thus ensuring better and more
equitable access to distributed generation and other energy
options.

Section 1.5. Zero emission standard legislative findings.

The General Assembly finds and declares:

(1) Reducing emissions of carbon dioxide and other air pollutants, such as sulfur oxides, nitrogen oxides, and particulate matter, is critical to improving air quality in Illinois for Illinois residents.

(2) Sulfur oxides, nitrogen oxides, and particulate emissions have significant adverse health effects on persons exposed to them, and carbon dioxide emissions result in climate change trends that could significantly adversely impact Illinois.

(3) The existing renewable portfolio standard has been successful in promoting the growth of renewable energy generation to reduce air pollution in Illinois. However, to achieve its environmental goals, Illinois must expand its commitment to zero emission energy generation and value the environmental attributes of zero emission generation that currently falls outside the scope of the existing renewable portfolio standard, including, but not limited to, nuclear power.

(4) Preserving existing zero emission energy generation and promoting new zero emission energy generation is vital to placing the State on a glide path to achieving its environmental goals and ensuring that air
quality in Illinois continues to improve.

(5) The Illinois Commerce Commission, the Illinois Power Agency, the Illinois Environmental Protection Agency, and the Department of Commerce and Economic Opportunity issued a report dated January 5, 2015 titled "Potential Nuclear Power Plant Closings in Illinois" (the Report), which addressed the issues identified by Illinois House Resolution 1146 of the 98th General Assembly, which, among other things, urged the Illinois Environmental Protection Agency to prepare a report showing how the premature closure of existing nuclear power plants in Illinois will affect the societal cost of increased greenhouse gas emissions based upon the Environmental Protection Agency's published societal cost of greenhouse gases.

(6) The Report also identified significant adverse consequences for electric reliability in Illinois, including significant voltage and thermal violations in the interstate transmission network, in the event that Illinois' existing nuclear facilities close prematurely. The Report also found that nuclear power plants are among the most reliable sources of energy, which means that electricity from nuclear power plants is available on the electric grid all hours of the day and when needed, thereby always reducing carbon emissions.

(7) Illinois House Resolution 1146 further urged that
the Report make findings concerning potential market-based
solutions that will ensure that the premature closure of
these nuclear power plants does not occur and that the
associated dire consequences to the environment, electric
reliability, and the regional economy are averted.

(8) The Report identified potential market-based
solutions that will ensure that the premature closure of
these nuclear power plants does not occur and that the
associated dire consequences to the environment, electric
reliability, and the regional economy are averted.

The General Assembly therefore finds that it is necessary
to establish and implement a zero emission standard, which will
increase the State's reliance on zero emission energy through
the procurement of zero emission energy credits from zero
emission resources, in order to achieve the State's
environmental objectives and reduce the adverse impact of
emitted air pollutants on the health and welfare of the State's
citizens.

Section 5. The Illinois Power Agency Act is amended by
changing Sections 1-5, 1-10, 1-56, and 1-75 as follows:

(20 ILCS 3855/1-5)

Sec. 1-5. Legislative declarations and findings. The
General Assembly finds and declares:

(1) The health, welfare, and prosperity of all Illinois
citizens require the provision of adequate, reliable, affordable, efficient, and environmentally sustainable electric service at the lowest total cost over time, taking into account any benefits of price stability.

(2) (Blank). The transition to retail competition is not complete. Some customers, especially residential and small commercial customers, have failed to benefit from lower electricity costs from retail and wholesale competition.

(3) (Blank). Escalating prices for electricity in Illinois pose a serious threat to the economic well-being, health, and safety of the residents of and the commerce and industry of the State.

(4) It To protect against this threat to economic well-being, health, and safety it is necessary to improve the process of procuring electricity to serve Illinois residents, to promote investment in energy efficiency and demand-response measures, and to maintain and support development of clean coal technologies, generation resources that operate at all hours of the day and under all weather conditions, zero emission resources, and renewable resources.

(5) Procuring a diverse electricity supply portfolio will ensure the lowest total cost over time for adequate, reliable, efficient, and environmentally sustainable electric service.
Including cost-effective renewable resources and zero emission credits from zero emission resources in that portfolio will reduce long-term direct and indirect costs to consumers by decreasing environmental impacts and by avoiding or delaying the need for new generation, transmission, and distribution infrastructure.

Energy efficiency, demand-response measures, zero emission energy, and renewable energy are resources currently underused in Illinois.

The State should encourage the use of advanced clean coal technologies that capture and sequester carbon dioxide emissions to advance environmental protection goals and to demonstrate the viability of coal and coal-derived fuels in a carbon-constrained economy.

The General Assembly enacted Public Act 96-0795 to reform the State's purchasing processes, recognizing that government procurement is susceptible to abuse if structural and procedural safeguards are not in place to ensure independence, insulation, oversight, and transparency.

The principles that underlie the procurement reform legislation apply also in the context of power purchasing. The General Assembly therefore finds that it is necessary to create the Illinois Power Agency and that the goals and objectives of that Agency are to accomplish each of the
following:

(A) Develop electricity procurement plans to ensure adequate, reliable, affordable, efficient, and environmentally sustainable electric service at the lowest total cost over time, taking into account any benefits of price stability, for electric utilities that on December 31, 2005 provided electric service to at least 100,000 customers in Illinois and for small multi-jurisdictional electric utilities that (i) on December 31, 2005 served less than 100,000 customers in Illinois and (ii) request a procurement plan for their Illinois jurisdictional load. The procurement plan shall be updated on an annual basis and shall include renewable energy resources and, beginning with the planning year commencing June 1, 2017, zero emission credits from zero emission resources sufficient to achieve the standards specified in this Act.

(B) Conduct competitive procurement processes to procure the supply resources identified in the procurement plan.

(C) Develop electric generation and co-generation facilities that use indigenous coal or renewable resources, or both, financed with bonds issued by the Illinois Finance Authority.

(D) Supply electricity from the Agency's facilities at cost to one or more of the following: municipal electric systems, governmental aggregators, or rural electric
cooperatives in Illinois.

(E) Ensure that the process of power procurement is conducted in an ethical and transparent fashion, immune from improper influence.

(F) Continue to review its policies and practices to determine how best to meet its mission of providing the lowest cost power to the greatest number of people, at any given point in time, in accordance with applicable law.

(G) Operate in a structurally insulated, independent, and transparent fashion so that nothing impedes the Agency's mission to secure power at the best prices the market will bear, provided that the Agency meets all applicable legal requirements.

(Source: P.A. 97-325, eff. 8-12-11; 97-618, eff. 10-26-11; 97-813, eff. 7-13-12.)

(20 ILCS 3855/1-10)

Sec. 1-10. Definitions.

"Agency" means the Illinois Power Agency.

"Agency loan agreement" means any agreement pursuant to which the Illinois Finance Authority agrees to loan the proceeds of revenue bonds issued with respect to a project to the Agency upon terms providing for loan repayment installments at least sufficient to pay when due all principal of, interest and premium, if any, on those revenue bonds, and providing for maintenance, insurance, and other matters in respect of the
"Authority" means the Illinois Finance Authority.

"Brownfield site project" means photovoltaics located at a site that is:

(1) located in an area that, on April 5, 2004, was in non-attainment for the National Ambient Air Quality Standard 1997 PM2.5 Standard;

(2) interconnected at the distribution system level of either an electric utility as defined in this Section, a municipal utility, or an electric cooperative, as defined in Section 3-119 of the Public Utilities Act; and

(3) regulated by any of the following entities under the following programs:

(i) the United States Environmental Protection Agency under the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended;

(ii) the United States Environmental Protection Agency under the Corrective Action Program of the federal Resource Conservation and Recovery Act, as amended; or

(iii) the Illinois Environmental Protection Agency under the Illinois Site Remediation Program.

"Clean coal facility" means an electric generating facility that uses primarily coal as a feedstock and that captures and sequesters carbon dioxide emissions at the
following levels: at least 50% of the total carbon dioxide emissions that the facility would otherwise emit if, at the time construction commences, the facility is scheduled to commence operation before 2016, at least 70% of the total carbon dioxide emissions that the facility would otherwise emit if, at the time construction commences, the facility is scheduled to commence operation during 2016 or 2017, and at least 90% of the total carbon dioxide emissions that the facility would otherwise emit if, at the time construction commences, the facility is scheduled to commence operation after 2017. The power block of the clean coal facility shall not exceed allowable emission rates for sulfur dioxide, nitrogen oxides, carbon monoxide, particulates and mercury for a natural gas-fired combined-cycle facility the same size as and in the same location as the clean coal facility at the time the clean coal facility obtains an approved air permit. All coal used by a clean coal facility shall have high volatile bituminous rank and greater than 1.7 pounds of sulfur per million btu content, unless the clean coal facility does not use gasification technology and was operating as a conventional coal-fired electric generating facility on June 1, 2009 (the effective date of Public Act 95-1027).

"Clean coal SNG brownfield facility" means a facility that (1) has commenced construction by July 1, 2015 on an urban brownfield site in a municipality with at least 1,000,000 residents; (2) uses a gasification process to produce
substitute natural gas; (3) uses coal as at least 50% of the total feedstock over the term of any sourcing agreement with a utility and the remainder of the feedstock may be either petroleum coke or coal, with all such coal having a high bituminous rank and greater than 1.7 pounds of sulfur per million Btu content unless the facility reasonably determines that it is necessary to use additional petroleum coke to deliver additional consumer savings, in which case the facility shall use coal for at least 35% of the total feedstock over the term of any sourcing agreement; and (4) captures and sequesters at least 85% of the total carbon dioxide emissions that the facility would otherwise emit.

"Clean coal SNG facility" means a facility that uses a gasification process to produce substitute natural gas, that sequesters at least 90% of the total carbon dioxide emissions that the facility would otherwise emit, that uses at least 90% coal as a feedstock, with all such coal having a high bituminous rank and greater than 1.7 pounds of sulfur per million Btu content, and that has a valid and effective permit to construct emission sources and air pollution control equipment and approval with respect to the federal regulations for Prevention of Significant Deterioration of Air Quality (PSD) for the plant pursuant to the federal Clean Air Act; provided, however, a clean coal SNG brownfield facility shall not be a clean coal SNG facility.

"Commission" means the Illinois Commerce Commission.
"Costs incurred in connection with the development and
construction of a facility" means:

(1) the cost of acquisition of all real property,
fixtures, and improvements in connection therewith and
equipment, personal property, and other property, rights,
and easements acquired that are deemed necessary for the
operation and maintenance of the facility;

(2) financing costs with respect to bonds, notes, and
other evidences of indebtedness of the Agency;

(3) all origination, commitment, utilization,
facility, placement, underwriting, syndication, credit
enhancement, and rating agency fees;

(4) engineering, design, procurement, consulting,
legal, accounting, title insurance, survey, appraisal,
escrow, trustee, collateral agency, interest rate hedging,
interest rate swap, capitalized interest, contingency, as
required by lenders, and other financing costs, and other
expenses for professional services; and

(5) the costs of plans, specifications, site study and
investigation, installation, surveys, other Agency costs
and estimates of costs, and other expenses necessary or
incidental to determining the feasibility of any project,
together with such other expenses as may be necessary or
incidental to the financing, insuring, acquisition, and
construction of a specific project and starting up,
commissioning, and placing that project in operation.
"Department" means the Department of Commerce and Economic Opportunity.

"Director" means the Director of the Illinois Power Agency.

"Demand-response" means measures that decrease peak electricity demand or shift demand from peak to off-peak periods.

"Distributed renewable energy generation device" means a device that is:

1. powered by wind, solar thermal energy, photovoltaic cells and panels, biodiesel, crops and untreated and unadulterated organic waste biomass, tree waste, and hydropower that does not involve new construction or significant expansion of hydropower dams;
2. interconnected at the distribution system level of either an electric utility as defined in this Section, an alternative retail electric supplier as defined in Section 16-102 of the Public Utilities Act, a municipal utility as defined in Section 3-105 of the Public Utilities Act, or a rural electric cooperative as defined in Section 3-119 of the Public Utilities Act;
3. located on the customer side of the customer's electric meter and is primarily used to offset that customer's electricity load or used in a community solar project; and
4. limited in nameplate capacity to no more than 2,000 kilowatts.
For an electric utility that services 3,000,000 or less customers in the State, "energy efficiency" means measures that reduce the amount of electricity or natural gas required to achieve a given end use. "Energy efficiency" also includes measures that reduce the total Btus of electricity and natural gas needed to meet the end use or uses.

For an electric utility that services more than 3,000,000 customers in the State, "energy efficiency" means measures that reduce the amount of electricity or natural gas required to achieve a given end use. "Energy efficiency" includes voltage optimization measures that optimize the voltage at points on the electric distribution voltage system and thereby conserve energy consumption by electric customers. "Energy efficiency" also includes measures that reduce the total Btus of electricity, natural gas, and other fuels needed to meet the end use or uses.

"Electric utility" has the same definition as found in Section 16-102 of the Public Utilities Act.

"Facility" means an electric generating unit or a co-generating unit that produces electricity along with related equipment necessary to connect the facility to an electric transmission or distribution system.

"Governmental aggregator" means one or more units of local government that individually or collectively procure electricity to serve residential retail electrical loads located within its or their jurisdiction.
"Local government" means a unit of local government as defined in Section 1 of Article VII of the Illinois Constitution.

"Municipality" means a city, village, or incorporated town.

"Person" means any natural person, firm, partnership, corporation, either domestic or foreign, company, association, limited liability company, joint stock company, or association and includes any trustee, receiver, assignee, or personal representative thereof.

"Project" means the planning, bidding, and construction of a facility.

"Public utility" has the same definition as found in Section 3-105 of the Public Utilities Act.

"Real property" means any interest in land together with all structures, fixtures, and improvements thereon, including lands under water and riparian rights, any easements, covenants, licenses, leases, rights-of-way, uses, and other interests, together with any liens, judgments, mortgages, or other claims or security interests related to real property.

"Renewable energy credit" means a tradable credit that represents the environmental attributes of a certain amount of energy produced from a renewable energy resource.

"Renewable energy resources" includes energy and its associated renewable energy credit or renewable energy credits from wind, solar thermal energy, photovoltaic cells and panels,
biodiesel, anaerobic digestion, crops and untreated and
unadulterated organic waste biomass, tree waste, hydropower
that does not involve new construction or significant expansion
of hydropower dams, and other alternative sources of
environmentally preferable energy. For purposes of this Act,
landfill gas produced in the State is considered a renewable
energy resource. "Renewable energy resources" does not include
the incineration or burning of tires, garbage, general
household, institutional, and commercial waste, industrial
lunchroom or office waste, landscape waste other than tree
waste, railroad crossties, utility poles, or construction or
demolition debris, other than untreated and unadulterated
waste wood.

"Retail customer" has the same definition as found in
Section 16-102 of the Public Utilities Act.

"Revenue bond" means any bond, note, or other evidence of
indebtedness issued by the Authority, the principal and
interest of which is payable solely from revenues or income
derived from any project or activity of the Agency.

"Sequester" means permanent storage of carbon dioxide by
injecting it into a saline aquifer, a depleted gas reservoir,
or an oil reservoir, directly or through an enhanced oil
recovery process that may involve intermediate storage,
regardless of whether these activities are conducted by a clean
clean coal facility, a clean coal SNG facility, a clean coal SNG
brownfield facility, or a party with which a clean coal
facility, clean coal SNG facility, or clean coal SNG brownfield facility has contracted for such purposes.

"Sourcing agreement" means (i) in the case of an electric utility, an agreement between the owner of a clean coal facility and such electric utility, which agreement shall have terms and conditions meeting the requirements of paragraph (3) of subsection (d) of Section 1-75, (ii) in the case of an alternative retail electric supplier, an agreement between the owner of a clean coal facility and such alternative retail electric supplier, which agreement shall have terms and conditions meeting the requirements of Section 16-115(d)(5) of the Public Utilities Act, and (iii) in case of a gas utility, an agreement between the owner of a clean coal SNG brownfield facility and the gas utility, which agreement shall have the terms and conditions meeting the requirements of subsection (h-1) of Section 9-220 of the Public Utilities Act.

"Substitute natural gas" or "SNG" means a gas manufactured by gasification of hydrocarbon feedstock, which is substantially interchangeable in use and distribution with conventional natural gas.

For an electric utility that serves 3,000,000 or less customers in the State, "total "Total resource cost test" or "TRC test" means a standard that is met if, for an investment in energy efficiency or demand-response measures, the benefit-cost ratio is greater than one. The benefit-cost ratio is the ratio of the net present value of the total benefits of
the program to the net present value of the total costs as calculated over the lifetime of the measures. A total resource cost test compares the sum of avoided electric utility costs, representing the benefits that accrue to the system and the participant in the delivery of those efficiency measures, as well as other quantifiable societal benefits, including avoided natural gas utility costs, to the sum of all incremental costs of end-use measures that are implemented due to the program (including both utility and participant contributions), plus costs to administer, deliver, and evaluate each demand-side program, to quantify the net savings obtained by substituting the demand-side program for supply resources. In calculating avoided costs of power and energy that an electric utility would otherwise have had to acquire, reasonable estimates shall be included of financial costs likely to be imposed by future regulations and legislation on emissions of greenhouse gases.

For an electric utility that serves more than 3,000,000 customers in the State, "total resource cost test" or "TRC test" means a standard that is met if, for an investment in energy efficiency or demand-response measures, the benefit-cost ratio is greater than one. The benefit-cost ratio is the ratio of the net present value of the total benefits of the program to the net present value of the total costs as calculated over the lifetime of the measures. A total resource cost test compares the sum of avoided electric utility costs,
representing the benefits that accrue to the system and the participant in the delivery of those efficiency measures, as well as other quantifiable societal benefits, including avoided costs associated with natural gas or other fuels, to the sum of all incremental costs of end-use measures that are implemented due to the program (including both utility and participant contributions), plus costs to administer, deliver, and evaluate each demand-side program, to quantify the net savings obtained by substituting the demand-side program for supply resources. In calculating avoided costs of power and energy that an electric utility would otherwise have had to acquire, reasonable estimates shall be included of financial costs likely to be imposed by future regulations and legislation on emissions of greenhouse gases. In discounting future societal costs and benefits for the purpose of calculating net present values, a societal discount rate based on actual, long-term Treasury bond yields should be used. Notwithstanding anything to the contrary, the benefits identified in this definition shall only be included in the TRC test if they are measurable and quantifiable, and the TRC test shall not include or take into account a calculation of market price suppression effects or demand reduction induced price effects, which is intended to be a restatement and clarification of existing law by this amendatory Act of the 99th General Assembly.

"Zero emission credit" means a tradable credit that...
represents the environmental attributes of one megawatt hour of
energy produced from a zero emission resource.

"Zero emission resource" means a facility that: (1) is
fueled by nuclear power; (2) does not emit any air pollution,
including sulfur dioxide, nitrogen oxide, or carbon dioxide, as
reported in the Generation Attribute Tracking System; and (3)
is located in PJM Interconnection, LLC or the Midcontinent
Independent System Operator, Inc.

(20 ILCS 3855/1-56)

Sec. 1-56. Illinois Power Agency Renewable Energy
Resources Fund.

(a) The Illinois Power Agency Renewable Energy Resources
Fund is created as a special fund in the State treasury.

(b) Through May 31, 2018, the Illinois Power Agency
Renewable Energy Resources Fund shall be administered by the
Agency to procure renewable energy credits in the percentages
specified in this subsection (b) resources. Renewable energy
credits Prior to June 1, 2011, resources procured pursuant to
this Section shall be procured from facilities located in
Illinois, provided the resources are available from those
facilities. If resources are not available in Illinois, then
they shall be procured in states that adjoin Illinois. If
resources are not available in Illinois or in states that adjoin Illinois, then they may be purchased elsewhere. Beginning June 1, 2011, resources procured pursuant to this Section shall be procured from facilities located in Illinois or states that adjoin Illinois. If renewable energy credits resources are not available in Illinois or in states that adjoin Illinois, then they may be procured elsewhere. To the extent available, at least 75% of these renewable energy credits resources shall come from wind generation. Of the renewable energy credits resources procured pursuant to this Section at least the following specified percentages shall come from photovoltaics on the following schedule: 0.5% by June 1, 2012; 1.5% by June 1, 2013; 3% by June 1, 2014; and 6% by June 1, 2015 and thereafter. Of the renewable energy credits resources procured pursuant to this Section, at least the following percentages shall come from distributed renewable energy generation devices: 0.5% by June 1, 2013, 0.75% by June 1, 2014, and 1% by June 1, 2015 and thereafter. To the extent available, half of the renewable energy credits resources procured from distributed renewable energy generation devices shall come from devices of less than 25 kilowatts in nameplate capacity. Renewable energy credits resources procured from distributed generation devices may also count towards the required percentages for wind and solar photovoltaics. Procurement of renewable energy credits resources from distributed renewable energy generation devices shall be done...
on an annual basis through multi-year contracts of no less than 5 years, and shall consist solely of renewable energy credits. Of the renewable energy credits from photovoltaics that are not distributed renewable energy generation devices procured pursuant to this Section, at least one-half shall come from brownfield site projects, if available. The Agency shall create application requirements for brownfield site projects that shall include, as appropriate, credit requirements for suppliers, demonstrated site control, bid bond requirements, construction completion deadlines, or other appropriate conditions to ensure confidence that selected bids will result in successful projects.

The Agency shall create credit requirements for suppliers of distributed renewable energy. In order to minimize the administrative burden of contracting entities, the Agency shall solicit the use of third-party organizations to aggregate distributed renewable energy into groups of no less than one megawatt in installed capacity. These third-party organizations shall administer contracts with individual distributed renewable energy generation device owners. An individual distributed renewable energy generation device owner shall have the ability to measure the output of his or her distributed renewable energy generation device.

(b-5) Beginning June 1, 2018, the Illinois Power Agency Renewable Energy Resources Fund shall be administered by the Agency to implement distributed generation programs, including
low-income distributed generation programs and low-income community distributed generation programs, and to purchase renewable energy credits from the distributed generation projects developed by these programs. The Agency shall be authorized to retain one or more consultants to develop, administer, aggregate, operate, maintain, and evaluate distributed generation projects, and the Agency shall retain the consultant or consultants in the same manner, to the extent practicable, as the Agency retains others to administer provisions of this Act, including, but not limited to, the procurement administrator. The Agency may conduct a procurement process to procure one or more third parties to implement all or a portion of the programs offered under this subsection (b-5), and electric utilities and their affiliates shall not be precluded from participating in such procurement.

The Agency, together with any consultants the Agency has retained, shall coordinate with Local Administrative Agencies to determine eligibility criteria for low-income distributed generation projects, provided that eligible income shall be no more than 150% of the poverty level. The Agency, in connection with Local Administrative Agencies, shall further develop the application process and participation rules that will govern low-income customers' participation in the projects. The costs incurred by the Agency associated with the distributed generation programs and projects implemented pursuant to this subsection (b-5) shall be recovered from the
Illinois Power Agency Renewable Energy Resources Fund. Such costs shall include consultant, third-party, and aggregator costs and such other administrative costs that the Agency deems (and the Commission find) appropriate to develop, administer, install, and operate distributed generation projects.

The Agency shall specify in each renewable energy resources plan how the moneys available in the Illinois Power Agency Renewable Energy Resources Fund for a given planning year shall be allocated to satisfy the requirements of this subsection (b-5), provided that 75% of the funding shall be allocated to low-income distributed generation projects and programs that use photovoltaic technology, 12.5% of the funding shall be allocated to not-for-profit distributed generation programs that use photovoltaic technology, including, but not limited to community distributed generation projects, and 12.5% of the funding shall be allocated to public building distributed generation programs that use photovoltaic technology.

The distributed generation projects and programs implemented under this subsection (b-5) shall conform to the definition of "distributed renewable energy generation device" as set forth in Section 1-10 of this Act and shall otherwise comply with the criteria and billing requirements set forth in subsection (i) of Section 16-107.6 of the Public Utilities Act; however, the low-income community distributed generation projects described in this subsection (b-5) shall not be subject to the requirement that the participant's address must
be located within 5 miles of the location of the project.

(b-10) Upon the submission of all payments required by Section 16-115D of the Public Utilities Act, no funds shall be deposited into the Illinois Power Agency Renewable Energy Resources Fund unless directed by order of the Commission.

(b-15) Upon the balance of the Illinois Power Agency Renewable Energy Resources Fund falling below $5,000, the Fund shall be terminated, and any remaining funds shall be transferred to the Low Income Home Energy Assistance Program, as authorized by the Energy Assistance Act.

The Agency shall create credit requirements for suppliers of distributed renewable energy. In order to minimize the administrative burden on contracting entities, the Agency shall solicit the use of third-party organizations to aggregate distributed renewable energy into groups of no less than one megawatt in installed capacity. These third-party organizations shall administer contracts with individual distributed renewable energy generation device owners. An individual distributed renewable energy generation device owner shall have the ability to measure the output of his or her distributed renewable energy generation device.

(c) Pursuant to a renewable energy resources plan approved by the Commission under Section 16-111.5 of the Public Utilities Act, the Agency shall procure renewable energy credits using moneys in the Illinois Power Agency Renewable Energy Resources Fund or moneys projected to be deposited into
the Fund resources at least once each year in conjunction with a procurement event for electric utilities required to comply with Section 1-75 of the Act and shall, whenever possible, enter into long-term contracts on an annual basis for a portion of the incremental requirement for the given procurement year.

(d) The price paid to procure renewable energy credits using monies from the Illinois Power Agency Renewable Energy Resources Fund shall not exceed market-based benchmarks established by the procurement administrator in consultation with Commission staff, Agency staff, and the procurement monitor the winning bid prices paid for like resources procured for electric utilities required to comply with Section 1-75 of this Act.

(e) All renewable energy credits procured using monies from the Illinois Power Agency Renewable Energy Resources Fund shall be permanently retired.

(f) The procurement process described in this Section is exempt from the requirements of the Illinois Procurement Code, pursuant to Section 20-10 of that Code.

(g) All disbursements from the Illinois Power Agency Renewable Energy Resources Fund shall be made only upon warrants of the Comptroller drawn upon the Treasurer as custodian of the Fund upon vouchers signed by the Director or by the person or persons designated by the Director for that purpose. The Comptroller is authorized to draw the warrant upon vouchers so signed. The Treasurer shall accept all warrants so
signed and shall be released from liability for all payments made on those warrants.

(h) The Illinois Power Agency Renewable Energy Resources Fund shall not be subject to sweeps, administrative charges, or chargebacks, including, but not limited to, those authorized under Section 8h of the State Finance Act, that would in any way result in the transfer of any funds from this Fund to any other fund of this State or in having any such funds utilized for any purpose other than the express purposes set forth in this Section.

(h-5) The Agency may assess fees to each bidder to recover the costs incurred in connection with a procurement process held pursuant to this Section.

(i) Supplemental procurement process.

(1) Within 90 days after the effective date of this amendatory Act of the 98th General Assembly, the Agency shall develop a one-time supplemental procurement plan limited to the procurement of renewable energy credits, if available, from new or existing photovoltaics, including, but not limited to, distributed photovoltaic generation. Nothing in this subsection (i) requires procurement of wind generation through the supplemental procurement.

Renewable energy credits procured from new photovoltaics, including, but not limited to, distributed photovoltaic generation, under this subsection (i) must be procured from devices installed by a qualified person. In
its supplemental procurement plan, the Agency shall establish contractually enforceable mechanisms for ensuring that the installation of new photovoltaics is performed by a qualified person.

For the purposes of this paragraph (1), "qualified person" means a person who performs installations of photovoltaics, including, but not limited to, distributed photovoltaic generation, and who: (A) has completed an apprenticeship as a journeyman electrician from a United States Department of Labor registered electrical apprenticeship and training program and received a certification of satisfactory completion; or (B) does not currently meet the criteria under clause (A) of this paragraph (1), but is enrolled in a United States Department of Labor registered electrical apprenticeship program, provided that the person is directly supervised by a person who meets the criteria under clause (A) of this paragraph (1); or (C) has obtained one of the following credentials in addition to attesting to satisfactory completion of at least 5 years or 8,000 hours of documented hands-on electrical experience: (i) a North American Board of Certified Energy Practitioners (NABCEP) Installer Certificate for Solar PV; (ii) an Underwriters Laboratories (UL) PV Systems Installer Certificate; (iii) an Electronics Technicians Association, International (ETAI) Level 3 PV Installer Certificate; or (iv) an
Associate in Applied Science degree from an Illinois Community College Board approved community college program in renewable energy or a distributed generation technology.

For the purposes of this paragraph (1), "directly supervised" means that there is a qualified person who meets the qualifications under clause (A) of this paragraph (1) and who is available for supervision and consultation regarding the work performed by persons under clause (B) of this paragraph (1), including a final inspection of the installation work that has been directly supervised to ensure safety and conformity with applicable codes.

For the purposes of this paragraph (1), "install" means the major activities and actions required to connect, in accordance with applicable building and electrical codes, the conductors, connectors, and all associated fittings, devices, power outlets, or apparatuses mounted at the premises that are directly involved in delivering energy to the premises' electrical wiring from the photovoltaics, including, but not limited to, to distributed photovoltaic generation.

The renewable energy credits procured pursuant to the supplemental procurement plan shall be procured using up to $30,000,000 from the Illinois Power Agency Renewable Energy Resources Fund. The Agency shall not plan to use funds from the Illinois Power Agency Renewable Energy
Resources Fund in excess of the monies on deposit in such fund or projected to be deposited into such fund. The supplemental procurement plan shall ensure adequate, reliable, affordable, efficient, and environmentally sustainable renewable energy resources (including credits) at the lowest total cost over time, taking into account any benefits of price stability.

To the extent available, 50% of the renewable energy credits procured from distributed renewable energy generation shall come from devices of less than 25 kilowatts in nameplate capacity. Procurement of renewable energy credits from distributed renewable energy generation devices shall be done through multi-year contracts of no less than 5 years. The Agency shall create credit requirements for counterparties. In order to minimize the administrative burden on contracting entities, the Agency shall solicit the use of third parties to aggregate distributed renewable energy. These third parties shall enter into and administer contracts with individual distributed renewable energy generation device owners. An individual distributed renewable energy generation device owner shall have the ability to measure the output of his or her distributed renewable energy generation device.

In developing the supplemental procurement plan, the Agency shall hold at least one workshop open to the public
within 90 days after the effective date of this amendatory Act of the 98th General Assembly and shall consider any comments made by stakeholders or the public. Upon development of the supplemental procurement plan within this 90-day period, copies of the supplemental procurement plan shall be posted and made publicly available on the Agency's and Commission's websites. All interested parties shall have 14 days following the date of posting to provide comment to the Agency on the supplemental procurement plan. All comments submitted to the Agency shall be specific, supported by data or other detailed analyses, and, if objecting to all or a portion of the supplemental procurement plan, accompanied by specific alternative wording or proposals. All comments shall be posted on the Agency's and Commission's websites. Within 14 days following the end of the 14-day review period, the Agency shall revise the supplemental procurement plan as necessary based on the comments received and file its revised supplemental procurement plan with the Commission for approval.

(2) Within 5 days after the filing of the supplemental procurement plan at the Commission, any person objecting to the supplemental procurement plan shall file an objection with the Commission. Within 10 days after the filing, the Commission shall determine whether a hearing is necessary. The Commission shall enter its order confirming or
modifying the supplemental procurement plan within 90 days after the filing of the supplemental procurement plan by the Agency.

(3) The Commission shall approve the supplemental procurement plan of renewable energy credits to be procured from new or existing photovoltaics, including, but not limited to, distributed photovoltaic generation, if the Commission determines that it will ensure adequate, reliable, affordable, efficient, and environmentally sustainable electric service in the form of renewable energy credits at the lowest total cost over time, taking into account any benefits of price stability.

(4) The supplemental procurement process under this subsection (i) shall include each of the following components:

(A) Procurement administrator. The Agency may retain a procurement administrator in the manner set forth in item (2) of subsection (a) of Section 1-75 of this Act to conduct the supplemental procurement or may elect to use the same procurement administrator administering the Agency’s annual procurement under Section 1-75.

(B) Procurement monitor. The procurement monitor retained by the Commission pursuant to Section 16-111.5 of the Public Utilities Act shall:

(i) monitor interactions among the procurement
(ii) monitor and report to the Commission on the progress of the supplemental procurement process;

(iii) provide an independent confidential report to the Commission regarding the results of the procurement events;

(iv) assess compliance with the procurement plan approved by the Commission for the supplemental procurement process;

(v) preserve the confidentiality of supplier and bidding information in a manner consistent with all applicable laws, rules, regulations, and tariffs;

(vi) provide expert advice to the Commission and consult with the procurement administrator regarding issues related to procurement process design, rules, protocols, and policy-related matters;

(vii) consult with the procurement administrator regarding the development and use of benchmark criteria, standard form contracts, credit policies, and bid documents; and

(viii) perform, with respect to the supplemental procurement process, any other procurement monitor duties specifically delineated
within subsection (i) of this Section.

(C) Solicitation, pre-qualification, and registration of bidders. The procurement administrator shall disseminate information to potential bidders to promote a procurement event, notify potential bidders that the procurement administrator may enter into a post-bid price negotiation with bidders that meet the applicable benchmarks, provide supply requirements, and otherwise explain the competitive procurement process. In addition to such other publication as the procurement administrator determines is appropriate, this information shall be posted on the Agency's and the Commission's websites. The procurement administrator shall also administer the prequalification process, including evaluation of credit worthiness, compliance with procurement rules, and agreement to the standard form contract developed pursuant to item (D) of this paragraph (4). The procurement administrator shall then identify and register bidders to participate in the procurement event.

(D) Standard contract forms and credit terms and instruments. The procurement administrator, in consultation with the Agency, the Commission, and other interested parties and subject to Commission oversight, shall develop and provide standard contract
forms for the supplier contracts that meet generally accepted industry practices as well as include any applicable State of Illinois terms and conditions that are required for contracts entered into by an agency of the State of Illinois. Standard credit terms and instruments that meet generally accepted industry practices shall be similarly developed. Contracts for new photovoltaics shall include a provision attesting that the supplier will use a qualified person for the installation of the device pursuant to paragraph (1) of subsection (i) of this Section. The procurement administrator shall make available to the Commission all written comments it receives on the contract forms, credit terms, or instruments. If the procurement administrator cannot reach agreement with the parties as to the contract terms and conditions, the procurement administrator must notify the Commission of any disputed terms and the Commission shall resolve the dispute. The terms of the contracts shall not be subject to negotiation by winning bidders, and the bidders must agree to the terms of the contract in advance so that winning bids are selected solely on the basis of price.

(E) Requests for proposals; competitive procurement process. The procurement administrator shall design and issue requests for proposals to supply
renewable energy credits in accordance with the supplemental procurement plan, as approved by the Commission. The requests for proposals shall set forth a procedure for sealed, binding commitment bidding with pay-as-bid settlement, and provision for selection of bids on the basis of price, provided, however, that no bid shall be accepted if it exceeds the benchmark developed pursuant to item (F) of this paragraph (4).

(F) Benchmarks. Benchmarks for each product to be procured shall be developed by the procurement administrator in consultation with Commission staff, the Agency, and the procurement monitor for use in this supplemental procurement.

(G) A plan for implementing contingencies in the event of supplier default, Commission rejection of results, or any other cause.

(5) Within 2 business days after opening the sealed bids, the procurement administrator shall submit a confidential report to the Commission. The report shall contain the results of the bidding for each of the products along with the procurement administrator's recommendation for the acceptance and rejection of bids based on the price benchmark criteria and other factors observed in the process. The procurement monitor also shall submit a confidential report to the Commission within 2 business
days after opening the sealed bids. The report shall contain the procurement monitor's assessment of bidder behavior in the process as well as an assessment of the procurement administrator's compliance with the procurement process and rules. The Commission shall review the confidential reports submitted by the procurement administrator and procurement monitor and shall accept or reject the recommendations of the procurement administrator within 2 business days after receipt of the reports.

(6) Within 3 business days after the Commission decision approving the results of a procurement event, the Agency shall enter into binding contractual arrangements with the winning suppliers using the standard form contracts.

(7) The names of the successful bidders and the average of the winning bid prices for each contract type and for each contract term shall be made available to the public within 2 days after the supplemental procurement event. The Commission, the procurement monitor, the procurement administrator, the Agency, and all participants in the procurement process shall maintain the confidentiality of all other supplier and bidding information in a manner consistent with all applicable laws, rules, regulations, and tariffs. Confidential information, including the confidential reports submitted by the procurement
administrator and procurement monitor pursuant to this Section, shall not be made publicly available and shall not be discoverable by any party in any proceeding, absent a compelling demonstration of need, nor shall those reports be admissible in any proceeding other than one for law enforcement purposes.

(8) The supplemental procurement provided in this subsection (i) shall not be subject to the requirements and limitations of subsections (c) and (d) of this Section.

(9) Expenses incurred in connection with the procurement process held pursuant to this Section, including, but not limited to, the cost of developing the supplemental procurement plan, the procurement administrator, procurement monitor, and the cost of the retirement of renewable energy credits purchased pursuant to the supplemental procurement shall be paid for from the Illinois Power Agency Renewable Energy Resources Fund. The Agency shall enter into an interagency agreement with the Commission to reimburse the Commission for its costs associated with the procurement monitor for the supplemental procurement process.

(20 ILCS 3855/1-75)

Sec. 1-75. Planning and Procurement Bureau. The Planning and Procurement Bureau has the following duties and
responsibilities:

(a) The Planning and Procurement Bureau shall each year, beginning in 2008, develop procurement plans and conduct competitive procurement processes in accordance with the requirements of Section 16-111.5 of the Public Utilities Act for the eligible retail customers of electric utilities that on December 31, 2005 provided electric service to at least 100,000 customers in Illinois. Beginning with the planning year commencing on June 1, 2017, the Planning and Procurement Bureau shall include in such plans and processes the procurement of zero emission credits from zero emission resources pursuant to subsection (d-5) of this Section for all of the utilities' retail customers. For planning years beginning on or after June 1, 2018, the Planning and Procurement Bureau shall include in such plans and processes the procurement of renewable energy resources for all of the utilities' retail customers in the amounts set forth in subsection (c) of this Section. The Planning and Procurement Bureau shall also develop procurement plans and conduct competitive procurement processes in accordance with the requirements of Section 16-111.5 of the Public Utilities Act for the eligible retail customers of small multi-jurisdictional electric utilities that (i) on December 31, 2005 served less than 100,000 customers in Illinois and (ii) request a procurement plan for their Illinois jurisdictional load. This Section shall not apply to a small multi-jurisdictional utility until such time as a small
multi-jurisdictional utility requests the Agency to prepare a procurement plan for their Illinois jurisdictional load. For the purposes of this Section, the term "eligible retail customers" has the same definition as found in Section 16-111.5(a) of the Public Utilities Act.

(1) The Agency shall each year, beginning in 2008, as needed, issue a request for qualifications for experts or expert consulting firms to develop the procurement plans in accordance with Section 16-111.5 of the Public Utilities Act. In order to qualify an expert or expert consulting firm must have:

(A) direct previous experience assembling large-scale power supply plans or portfolios for end-use customers;

(B) an advanced degree in economics, mathematics, engineering, risk management, or a related area of study;

(C) 10 years of experience in the electricity sector, including managing supply risk;

(D) expertise in wholesale electricity market rules, including those established by the Federal Energy Regulatory Commission and regional transmission organizations;

(E) expertise in credit protocols and familiarity with contract protocols;

(F) adequate resources to perform and fulfill the
required functions and responsibilities; and

(G) the absence of a conflict of interest and inappropriate bias for or against potential bidders or the affected electric utilities.

(2) The Agency shall each year, as needed, issue a request for qualifications for a procurement administrator to conduct the competitive procurement processes in accordance with Section 16-111.5 of the Public Utilities Act. In order to qualify an expert or expert consulting firm must have:

(A) direct previous experience administering a large-scale competitive procurement process;

(B) an advanced degree in economics, mathematics, engineering, or a related area of study;

(C) 10 years of experience in the electricity sector, including risk management experience;

(D) expertise in wholesale electricity market rules, including those established by the Federal Energy Regulatory Commission and regional transmission organizations;

(E) expertise in credit and contract protocols;

(F) adequate resources to perform and fulfill the required functions and responsibilities; and

(G) the absence of a conflict of interest and inappropriate bias for or against potential bidders or the affected electric utilities.
(3) The Agency shall provide affected utilities and other interested parties with the lists of qualified experts or expert consulting firms identified through the request for qualifications processes that are under consideration to develop the procurement plans and to serve as the procurement administrator. The Agency shall also provide each qualified expert's or expert consulting firm's response to the request for qualifications. All information provided under this subparagraph shall also be provided to the Commission. The Agency may provide by rule for fees associated with supplying the information to utilities and other interested parties. These parties shall, within 5 business days, notify the Agency in writing if they object to any experts or expert consulting firms on the lists. Objections shall be based on:

(A) failure to satisfy qualification criteria;

(B) identification of a conflict of interest; or

(C) evidence of inappropriate bias for or against potential bidders or the affected utilities.

The Agency shall remove experts or expert consulting firms from the lists within 10 days if there is a reasonable basis for an objection and provide the updated lists to the affected utilities and other interested parties. If the Agency fails to remove an expert or expert consulting firm from a list, an objecting party may seek review by the Commission within 5 days thereafter by filing
a petition, and the Commission shall render a ruling on the petition within 10 days. There is no right of appeal of the Commission's ruling.

(4) The Agency shall issue requests for proposals to the qualified experts or expert consulting firms to develop a procurement plan for the affected utilities and to serve as procurement administrator.

(5) The Agency shall select an expert or expert consulting firm to develop procurement plans based on the proposals submitted and shall award contracts of up to 5 years to those selected.

(6) The Agency shall select an expert or expert consulting firm, with approval of the Commission, to serve as procurement administrator based on the proposals submitted. If the Commission rejects, within 5 days, the Agency's selection, the Agency shall submit another recommendation within 3 days based on the proposals submitted. The Agency shall award a 5-year contract to the expert or expert consulting firm so selected with Commission approval.

(b) The experts or expert consulting firms retained by the Agency shall, as appropriate, prepare procurement plans, and conduct a competitive procurement process as prescribed in Section 16-111.5 of the Public Utilities Act, to ensure adequate, reliable, affordable, efficient, and environmentally sustainable electric service at the lowest total cost over
time, taking into account any benefits of price stability, for the applicable eligible retail customers of electric utilities that on December 31, 2005 provided electric service to at least 100,000 customers in the State of Illinois, and for eligible Illinois retail customers of small multi-jurisdictional electric utilities that (i) on December 31, 2005 served less than 100,000 customers in Illinois and (ii) request a procurement plan for their Illinois jurisdictional load.

(c) Renewable portfolio standard.

(1) Through May 31, 2018, the procurement plans shall include cost-effective renewable energy resources equal to a minimum percentage of each utility's actual total supply to serve the load of eligible retail customers, as defined in Section 16-111.5(a) of the Public Utilities Act, as follows procured for each of the following years shall be generated from cost-effective renewable energy resources: at least 2% by June 1, 2008; at least 4% by June 1, 2009; at least 5% by June 1, 2010; at least 6% by June 1, 2011; at least 7% by June 1, 2012; at least 8% by June 1, 2013; at least 9% by June 1, 2014; at least 10% by June 1, 2015; at least 11.5% by June 1, 2016; and at least 13% by June 1, 2017.

For planning years commencing on or after June 1, 2018, the procurement plans shall include cost-effective renewable energy resources equal to a minimum percentage of each utility's actual load for retail customers whose
electric service has not been declared competitive pursuant to Section 16-113 of the Public Utilities Act, as follows: at least 14.5% by June 1, 2018, and increasing by at least 1.5% each year thereafter to at least 25% by June 1, 2025.

For planning years commencing on or after June 1, 2018, the procurement plans shall include cost-effective renewable energy resources equal to the applicable portion of each utility's actual load for retail customers whose electric service has been declared competitive pursuant to Section 16-113 of the Public Utilities Act as follows: at least 14.5% by June 1, 2018, and increasing by at least 1.5% each year thereafter to at least 25% by June 1, 2025.

Beginning June 1, 2018, the applicable portion shall be 50% of each utility's actual load for retail customers whose electric service has been declared competitive pursuant to Section 16-113 of the Public Utilities Act. No later than a date set by the Agency, the applicable portion shall increase to 75% of each utility's actual load for such retail customers, and, no later than a date set by the Agency, the applicable portion shall increase to 100% of each utility's actual load for such retail customers. However, if an alternative retail electric supplier owns facilities on December 31, 2015 that generate renewable energy resources and supplies to certain customers pursuant to Section 16-115D of the Public Utilities Act,
then the applicable portion identified in this paragraph (1) shall be reduced for a given year by the amount of those renewable energy resources supplied to those retail customers.

(A) For those planning years commencing prior to June 1, 2018, the following requirements shall apply:

(i) To the extent that it is available, at least 75% of the renewable energy resources used to meet these standards shall come from wind generation and, beginning on June 1, 2011, at least the following percentages of the renewable energy resources used to meet these standards shall come from photovoltaics on the following schedule: 0.5% by June 1, 2012, 1.5% by June 1, 2013; 3% by June 1, 2014; and 6% by June 1, of each year thereafter through May 31, 2018 and thereafter.

(ii) Of the renewable energy resources procured pursuant to this Section, at least the following percentages shall come from distributed renewable energy generation devices: 0.5% by June 1, 2013, 0.75% by June 1, 2014, and 1% by June 1, 2015 and each year thereafter through May 31, 2018. To the extent available, half of the renewable energy resources procured from distributed renewable energy generation shall come from devices of less than 25 kilowatts in nameplate
capacity. Renewable energy resources procured from 
distributed generation devices may also count 
towards the required percentages for wind and 
solar photovoltaics. Procurement of renewable 
energy resources from distributed renewable energy 
generation devices shall be done on an annual basis 
through multi-year contracts of no less than 5 
years, and shall consist solely of renewable 
energy credits.

(B) For those planning years commencing after May 
31, 2018 and ending May 31, 2026, the following 
procurement requirements shall be achieved, to the 
extent the resources are available:

(i) for each planning year, 75% of the total 
renewable energy credits procured shall come from 
wind generation, provided that such credits do not 
include any generating unit whose costs were being 
recovered through rates regulated by any state or 
states on January 1, 2017;

(ii) no later than the planning year ending May 
31, 2021, 5% of the total renewable energy credits 
procured or the equivalent amount of renewable 
energy credits from 1,000 megawatts of 
photovoltaic distributed generation nameplate 
capacity, whichever is greater, shall come from 
ew photovoltaic distributed generation projects;
of that amount, to the extent possible, the Agency shall procure 75% from photovoltaic distributed generation projects having an installed nameplate capacity of less than 2 megawatts and shall procure 25% from brownfield site projects or utility-scale photovoltaic projects that are greater than 2 megawatts of installed nameplate capacity; and

(iii) no later than the planning year ending May 31, 2026, 6% of the total renewable energy credits procured or the equivalent amount of renewable energy credits from 1,500 megawatts of photovoltaic distributed generation nameplate capacity, whichever is greater, shall come from new photovoltaic distributed generation projects; of that amount, to the extent possible, the Agency shall procure 75% from photovoltaic distributed generation projects having an installed nameplate capacity of less than 2 megawatts and shall procure 25% from brownfield site projects or utility-scale photovoltaic projects that are greater than 2 megawatts of installed nameplate capacity.

(C) The Agency may procure contracts of at least 15 years in length for the resources procured under items (ii) and (iii) of subparagraph (B) of paragraph (1) of this subsection (c), for which payment shall be made in full by the contracting utilities at such time that the
facility producing the renewable energy credits is interconnected at the distribution system level of the utility and energized.

(D) The Agency shall create credit requirements for suppliers of distributed renewable energy. In order to minimize the administrative burden on contracting entities, the Agency shall solicit the use of third-party organizations to aggregate distributed renewable energy into groups of no less than one megawatt in installed capacity. These third-party organizations shall administer contracts with individual distributed renewable energy generation device owners. An individual distributed renewable energy generation device owner shall have the ability to measure the output of his or her distributed renewable energy generation device.

(E) For purposes of this subsection (c), "cost-effective" means that the costs of procuring renewable energy resources do not cause the limit stated in paragraph (2) of this subsection (c) to be exceeded and do not exceed benchmarks based on market prices for renewable energy resources in the region, which shall be developed by the procurement administrator, in consultation with the Commission staff, Agency staff, and the procurement monitor and shall be subject to Commission review and approval. A
utility shall be deemed to have fully complied with the requirements of this subsection (c) by entering into contracts to procure the applicable percentage of renewable energy resources by June 1 of each year.

(F) Renewable energy credits from photovoltaic distributed generation that are the subject of items (ii) and (iii) of subparagraph (B) of paragraph (1) of this subsection (c) shall be purchased before any other renewable energy credits are purchased until such time as the targets specified therein have been achieved.

(2) For purposes of this subsection (c), the required procurement of cost-effective renewable energy resources for a particular year commencing prior to June 1, 2018 shall be measured as a percentage of the actual amount of electricity (megawatt-hours) supplied by the electric utility to eligible retail customers in the planning year ending immediately prior to the procurement, and, for planning years commencing on and after June 1, 2018, the required procurement of cost-effective renewable energy resources for a particular year shall be measured as a percentage of the actual amount of electricity (megawatt-hours) delivered by the electric utility in the planning year ending immediately prior to the procurement, to all retail customers in its service territory. For purposes of this subsection (c), the amount paid per kilowatthour means the total amount paid for electric
service expressed on a per kilowatthour basis. For purposes of this subsection (c), the total amount paid for electric service includes without limitation amounts paid for supply, transmission, distribution, surcharges, and add-on taxes.

Notwithstanding the requirements of this subsection (c), the total of renewable energy resources procured pursuant to the procurement plan for any single year shall be subject to the limitations of this paragraph (2). Such procurement shall be reduced for all retail customers based on the reduced by an amount necessary to limit the annual estimated average net increase due to the costs of these resources included in the amounts paid by eligible retail customers in connection with electric service to:

(A) in 2008, no more than 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007;

(B) in 2009, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2008 or 1% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007;

(C) in 2010, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2009 or 1.5% of the amount paid per kilowatthour by those customers during
the year ending May 31, 2007;

(D) in 2011, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2010 or 2% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007; and

(E) thereafter, the amount of renewable energy resources procured pursuant to the procurement plan for any single year shall be reduced by an amount necessary to limit the estimated average net increase due to the cost of these resources included in the amounts paid by eligible retail customers in connection with electric service to no more than the greater of 2.015% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007 or the incremental amount per kilowatthour paid for these resources in 2011. To arrive at a maximum dollar amount of renewable energy resources to be procured for the particular planning year, the resulting per kilowatthour amount shall be applied to the actual amount of kilowatthours of electricity delivered by the electric utility in the planning year immediately prior to the procurement to all retail customers in its service territory. The calculations required by this paragraph (2) shall be made only once for each planning year at the time that the renewable energy resources
are procured. Once the determination as to the amount
of renewable energy resources to procure is made based
on the calculations set forth in this paragraph (2) and
the contracts procuring those amounts are executed, no
subsequent rate impact determinations shall be made
and no adjustments to those contract amounts shall be
allowed. All costs incurred under such contracts shall
be fully recoverable by the electric utility as
provided in this Section.

No later than June 30, 2011, the Commission shall
review the limitation on the amount of renewable energy
resources procured pursuant to this subsection (c) and
report to the General Assembly its findings as to
whether that limitation unduly constrains the
procurement of cost-effective renewable energy
resources.

(3) Through June 1, 2011, renewable energy resources
shall be counted for the purpose of meeting the renewable
energy standards set forth in paragraph (1) of this
subsection (c) only if they are generated from facilities
located in the State, provided that cost-effective
renewable energy resources are available from those
facilities. If those cost-effective resources are not
available in Illinois, they shall be procured in states
that adjoin Illinois and may be counted towards compliance.
If those cost-effective resources are not available in
Illinois or in states that adjoin Illinois, they shall be purchased elsewhere and shall be counted towards compliance. After June 1, 2011, cost-effective renewable energy resources located in Illinois and in states that adjoin Illinois may be counted towards compliance with the standards set forth in paragraph (1) of this subsection (c). If those cost-effective resources are not available in Illinois or in states that adjoin Illinois, they shall be purchased elsewhere and shall be counted towards compliance.

(4) The electric utility shall retire all renewable energy credits used to comply with the standard.

(5) Beginning with the year commencing June 1, 2010, an electric utility subject to this subsection (c) shall apply the lesser of the maximum alternative compliance payment rate or the most recent estimated alternative compliance payment rate for its service territory for the corresponding compliance period, established pursuant to subsection (d) of Section 16-115D of the Public Utilities Act to its retail customers that take service pursuant to the electric utility's hourly pricing tariff or tariffs. The electric utility shall retain all amounts collected as a result of the application of the alternative compliance payment rate or rates to such customers, and, beginning in 2011, the utility shall include in the information provided under item (1) of subsection (d) of Section 16-111.5 of the
Public Utilities Act the amounts collected under the alternative compliance payment rate or rates for the prior year ending May 31. Notwithstanding any limitation on the procurement of renewable energy resources imposed by item (2) of this subsection (c), the Agency shall increase its spending on the purchase of renewable energy resources to be procured by the electric utility for the next plan year by an amount equal to the amounts collected by the utility under the alternative compliance payment rate or rates in the prior year ending May 31. Beginning April 1, 2012, and each year thereafter, the Agency shall prepare a public report for the General Assembly and Illinois Commerce Commission that shall include, but not necessarily be limited to:

(A) a comparison of the costs associated with the Agency's procurement of renewable energy resources to (1) the Agency's costs associated with electricity generated by other types of generation facilities and (2) the benefits associated with the Agency's procurement of renewable energy resources; and

(B) an analysis of the rate impacts associated with the Illinois Power Agency's procurement of renewable resources, including, but not limited to, any long-term contracts, on the eligible retail customers of electric utilities.

The analysis shall include the Agency's estimate of the
total dollar impact that the Agency's procurement of renewable resources has had on the annual electricity bills of the customer classes that comprise each eligible retail customer class taking service from an electric utility. The Agency's report shall also analyze how the operation of the alternative compliance payment mechanism, any long-term contracts, or other aspects of the applicable renewable portfolio standards impacts the rates of customers of alternative retail electric suppliers.

(6) Beginning with the planning year commencing June 1, 2018, the procurement plan shall include a renewable energy resources plan for the procurement of renewable energy credits in accordance with the requirements of Section 1-56 of this Act and renewable energy resources in accordance with the requirements of this Section. The renewable energy resources plan shall ensure adequate, reliable, affordable, efficient, and environmentally sustainable renewable energy resources at the lowest total cost over time, taking into account any benefits of price stability. The renewable energy resources plan shall also include the items set forth in subparagraphs (i) through (iii) of paragraph (5) of subsection (b) of Section 16-111.5 of the Public Utilities Act.

Nothing in this paragraph (6) is intended to alter any of the limitations or conditions otherwise imposed on the purchase of renewable energy credits or renewable energy
resources by any other section of this Act.

(7) The electric utility shall be entitled to recover all of its costs associated with the procurement of renewable energy resources pursuant to this Section through an automatic adjustment clause tariff in accordance with subsection (k) of Section 16-108 of the Public Utilities Act. All procurement of renewable energy resources in the procurement plans of the electric utilities shall be pursuant to a competitive bidding process and shall be approved by the Commission pursuant to Section 16-111.5 of the Public Utilities Act.

(d) Clean coal portfolio standard.

(1) The procurement plans shall include electricity generated using clean coal. Each utility shall enter into one or more sourcing agreements with the initial clean coal facility, as provided in paragraph (3) of this subsection (d), covering electricity generated by the initial clean coal facility representing at least 5% of each utility's total supply to serve the load of eligible retail customers in 2015 and each year thereafter, as described in paragraph (3) of this subsection (d), subject to the limits specified in paragraph (2) of this subsection (d). It is the goal of the State that by January 1, 2025, 25% of the electricity used in the State shall be generated by cost-effective clean coal facilities. For purposes of this subsection (d), "cost-effective" means that the expenditures pursuant to
such sourcing agreements do not cause the limit stated in paragraph (2) of this subsection (d) to be exceeded and do not exceed cost-based benchmarks, which shall be developed to assess all expenditures pursuant to such sourcing agreements covering electricity generated by clean coal facilities, other than the initial clean coal facility, by the procurement administrator, in consultation with the Commission staff, Agency staff, and the procurement monitor and shall be subject to Commission review and approval.

A utility party to a sourcing agreement shall immediately retire any emission credits that it receives in connection with the electricity covered by such agreement.

Utilities shall maintain adequate records documenting the purchases under the sourcing agreement to comply with this subsection (d) and shall file an accounting with the load forecast that must be filed with the Agency by July 15 of each year, in accordance with subsection (d) of Section 16-111.5 of the Public Utilities Act.

A utility shall be deemed to have complied with the clean coal portfolio standard specified in this subsection (d) if the utility enters into a sourcing agreement as required by this subsection (d).

(2) For purposes of this subsection (d), the required execution of sourcing agreements with the initial clean coal facility for a particular year shall be measured as a
percentage of the actual amount of electricity (megawatt-hours) supplied by the electric utility to eligible retail customers in the planning year ending immediately prior to the agreement's execution. For purposes of this subsection (d), the amount paid per kilowatthour means the total amount paid for electric service expressed on a per kilowatthour basis. For purposes of this subsection (d), the total amount paid for electric service includes without limitation amounts paid for supply, transmission, distribution, surcharges and add-on taxes.

Notwithstanding the requirements of this subsection (d), the total amount paid under sourcing agreements with clean coal facilities pursuant to the procurement plan for any given year shall be reduced by an amount necessary to limit the annual estimated average net increase due to the costs of these resources included in the amounts paid by eligible retail customers in connection with electric service to:

(A) in 2010, no more than 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2009;

(B) in 2011, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2010 or 1% of the amount paid per kilowatthour by those customers during the
year ending May 31, 2009;

(C) in 2012, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2011 or 1.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2009;

(D) in 2013, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2012 or 2% of the amount paid per kilowatthour by those customers during the year ending May 31, 2009; and

(E) thereafter, the total amount paid under sourcing agreements with clean coal facilities pursuant to the procurement plan for any single year shall be reduced by an amount necessary to limit the estimated average net increase due to the cost of these resources included in the amounts paid by eligible retail customers in connection with electric service to no more than the greater of (i) 2.015% of the amount paid per kilowatthour by those customers during the year ending May 31, 2009 or (ii) the incremental amount per kilowatthour paid for these resources in 2013. These requirements may be altered only as provided by statute.

No later than June 30, 2015, the Commission shall review the limitation on the total amount paid under
sourcing agreements, if any, with clean coal facilities pursuant to this subsection (d) and report to the General Assembly its findings as to whether that limitation unduly constrains the amount of electricity generated by cost-effective clean coal facilities that is covered by sourcing agreements.

(3) Initial clean coal facility. In order to promote development of clean coal facilities in Illinois, each electric utility subject to this Section shall execute a sourcing agreement to source electricity from a proposed clean coal facility in Illinois (the "initial clean coal facility") that will have a nameplate capacity of at least 500 MW when commercial operation commences, that has a final Clean Air Act permit on the effective date of this amendatory Act of the 95th General Assembly, and that will meet the definition of clean coal facility in Section 1-10 of this Act when commercial operation commences. The sourcing agreements with this initial clean coal facility shall be subject to both approval of the initial clean coal facility by the General Assembly and satisfaction of the requirements of paragraph (4) of this subsection (d) and shall be executed within 90 days after any such approval by the General Assembly. The Agency and the Commission shall have authority to inspect all books and records associated with the initial clean coal facility during the term of such a sourcing agreement. A utility's sourcing agreement
for electricity produced by the initial clean coal facility shall include:

(A) a formula contractual price (the "contract price") approved pursuant to paragraph (4) of this subsection (d), which shall:

(i) be determined using a cost of service methodology employing either a level or deferred capital recovery component, based on a capital structure consisting of 45% equity and 55% debt, and a return on equity as may be approved by the Federal Energy Regulatory Commission, which in any case may not exceed the lower of 11.5% or the rate of return approved by the General Assembly pursuant to paragraph (4) of this subsection (d); and

(ii) provide that all miscellaneous net revenue, including but not limited to net revenue from the sale of emission allowances, if any, substitute natural gas, if any, grants or other support provided by the State of Illinois or the United States Government, firm transmission rights, if any, by-products produced by the facility, energy or capacity derived from the facility and not covered by a sourcing agreement pursuant to paragraph (3) of this subsection (d) or item (5) of subsection (d) of Section 16-115 of the
Public Utilities Act, whether generated from the synthesis gas derived from coal, from SNG, or from natural gas, shall be credited against the revenue requirement for this initial clean coal facility;

(B) power purchase provisions, which shall:

(i) provide that the utility party to such sourcing agreement shall pay the contract price for electricity delivered under such sourcing agreement;

(ii) require delivery of electricity to the regional transmission organization market of the utility that is party to such sourcing agreement;

(iii) require the utility party to such sourcing agreement to buy from the initial clean coal facility in each hour an amount of energy equal to all clean coal energy made available from the initial clean coal facility during such hour times a fraction, the numerator of which is such utility's retail market sales of electricity (expressed in kilowatthours sold) in the State during the prior calendar month and the denominator of which is the total retail market sales of electricity (expressed in kilowatthours sold) in the State by utilities during such prior month and the sales of electricity (expressed in kilowatthours sold) in the State by alternative
retail electric suppliers during such prior month
that are subject to the requirements of this
subsection (d) and paragraph (5) of subsection (d)
of Section 16-115 of the Public Utilities Act,
provided that the amount purchased by the utility
in any year will be limited by paragraph (2) of
this subsection (d); and

(iv) be considered pre-existing contracts in
such utility's procurement plans for eligible
retail customers;

(C) contract for differences provisions, which
shall:

(i) require the utility party to such sourcing
agreement to contract with the initial clean coal
facility in each hour with respect to an amount of
energy equal to all clean coal energy made
available from the initial clean coal facility
during such hour times a fraction, the numerator of
which is such utility's retail market sales of
electricity (expressed in kilowatthours sold) in
the utility's service territory in the State
during the prior calendar month and the
denominator of which is the total retail market
sales of electricity (expressed in kilowatthours
sold) in the State by utilities during such prior
month and the sales of electricity (expressed in
kilowatthours sold) in the State by alternative retail electric suppliers during such prior month that are subject to the requirements of this subsection (d) and paragraph (5) of subsection (d) of Section 16-115 of the Public Utilities Act, provided that the amount paid by the utility in any year will be limited by paragraph (2) of this subsection (d);

(ii) provide that the utility's payment obligation in respect of the quantity of electricity determined pursuant to the preceding clause (i) shall be limited to an amount equal to (1) the difference between the contract price determined pursuant to subparagraph (A) of paragraph (3) of this subsection (d) and the day-ahead price for electricity delivered to the regional transmission organization market of the utility that is party to such sourcing agreement (or any successor delivery point at which such utility's supply obligations are financially settled on an hourly basis) (the "reference price") on the day preceding the day on which the electricity is delivered to the initial clean coal facility busbar, multiplied by (2) the quantity of electricity determined pursuant to the preceding clause (i); and
not require the utility to take physical
delivery of the electricity produced by the
facility;

(D) general provisions, which shall:

(i) specify a term of no more than 30 years,
commencing on the commercial operation date of the
facility;

(ii) provide that utilities shall maintain
adequate records documenting purchases under the
sourcing agreements entered into to comply with
this subsection (d) and shall file an accounting
with the load forecast that must be filed with the
Agency by July 15 of each year, in accordance with
subsection (d) of Section 16-111.5 of the Public
Utilities Act;

(iii) provide that all costs associated with
the initial clean coal facility will be
periodically reported to the Federal Energy
Regulatory Commission and to purchasers in
accordance with applicable laws governing
cost-based wholesale power contracts;

(iv) permit the Illinois Power Agency to
assume ownership of the initial clean coal
facility, without monetary consideration and
otherwise on reasonable terms acceptable to the
Agency, if the Agency so requests no less than 3
years prior to the end of the stated contract term;
(v) require the owner of the initial clean coal
facility to provide documentation to the
Commission each year, starting in the facility's
first year of commercial operation, accurately
reporting the quantity of carbon emissions from
the facility that have been captured and
sequestered and report any quantities of carbon
released from the site or sites at which carbon
emissions were sequestered in prior years, based
on continuous monitoring of such sites. If, in any
year after the first year of commercial operation,
the owner of the facility fails to demonstrate that
the initial clean coal facility captured and
sequestered at least 50% of the total carbon
emissions that the facility would otherwise emit
or that sequestration of emissions from prior
years has failed, resulting in the release of
carbon dioxide into the atmosphere, the owner of
the facility must offset excess emissions. Any
such carbon offsets must be permanent, additional,
verifiable, real, located within the State of
Illinois, and legally and practicably enforceable.
The cost of such offsets for the facility that are
not recoverable shall not exceed $15 million in any
given year. No costs of any such purchases of
carbon offsets may be recovered from a utility or its customers. All carbon offsets purchased for this purpose and any carbon emission credits associated with sequestration of carbon from the facility must be permanently retired. The initial clean coal facility shall not forfeit its designation as a clean coal facility if the facility fails to fully comply with the applicable carbon sequestration requirements in any given year, provided the requisite offsets are purchased. However, the Attorney General, on behalf of the People of the State of Illinois, may specifically enforce the facility's sequestration requirement and the other terms of this contract provision. Compliance with the sequestration requirements and offset purchase requirements specified in paragraph (3) of this subsection (d) shall be reviewed annually by an independent expert retained by the owner of the initial clean coal facility, with the advance written approval of the Attorney General. The Commission may, in the course of the review specified in item (vii), reduce the allowable return on equity for the facility if the facility wilfully fails to comply with the carbon capture and sequestration requirements set forth in this item (v);
(vi) include limits on, and accordingly provide for modification of, the amount the utility is required to source under the sourcing agreement consistent with paragraph (2) of this subsection (d);

(vii) require Commission review: (1) to determine the justness, reasonableness, and prudence of the inputs to the formula referenced in subparagraphs (A)(i) through (A)(iii) of paragraph (3) of this subsection (d), prior to an adjustment in those inputs including, without limitation, the capital structure and return on equity, fuel costs, and other operations and maintenance costs and (2) to approve the costs to be passed through to customers under the sourcing agreement by which the utility satisfies its statutory obligations. Commission review shall occur no less than every 3 years, regardless of whether any adjustments have been proposed, and shall be completed within 9 months;

(viii) limit the utility's obligation to such amount as the utility is allowed to recover through tariffs filed with the Commission, provided that neither the clean coal facility nor the utility waives any right to assert federal pre-emption or any other argument in response to a purported
disallowance of recovery costs;

(ix) limit the utility's or alternative retail electric supplier's obligation to incur any liability until such time as the facility is in commercial operation and generating power and energy and such power and energy is being delivered to the facility busbar;

(x) provide that the owner or owners of the initial clean coal facility, which is the counterparty to such sourcing agreement, shall have the right from time to time to elect whether the obligations of the utility party thereto shall be governed by the power purchase provisions or the contract for differences provisions;

(xi) append documentation showing that the formula rate and contract, insofar as they relate to the power purchase provisions, have been approved by the Federal Energy Regulatory Commission pursuant to Section 205 of the Federal Power Act;

(xii) provide that any changes to the terms of the contract, insofar as such changes relate to the power purchase provisions, are subject to review under the public interest standard applied by the Federal Energy Regulatory Commission pursuant to Sections 205 and 206 of the Federal Power Act; and
(xiii) conform with customary lender requirements in power purchase agreements used as the basis for financing non-utility generators.

(4) Effective date of sourcing agreements with the initial clean coal facility.

Any proposed sourcing agreement with the initial clean coal facility shall not become effective unless the following reports are prepared and submitted and authorizations and approvals obtained:

(i) Facility cost report. The owner of the initial clean coal facility shall submit to the Commission, the Agency, and the General Assembly a front-end engineering and design study, a facility cost report, method of financing (including but not limited to structure and associated costs), and an operating and maintenance cost quote for the facility (collectively "facility cost report"), which shall be prepared in accordance with the requirements of this paragraph (4) of subsection (d) of this Section, and shall provide the Commission and the Agency access to the work papers, relied upon documents, and any other backup documentation related to the facility cost report.

(ii) Commission report. Within 6 months following receipt of the facility cost report, the Commission, in consultation with the Agency, shall submit a report to the General Assembly setting forth its analysis of the
facility cost report. Such report shall include, but not be limited to, a comparison of the costs associated with electricity generated by the initial clean coal facility to the costs associated with electricity generated by other types of generation facilities, an analysis of the rate impacts on residential and small business customers over the life of the sourcing agreements, and an analysis of the likelihood that the initial clean coal facility will commence commercial operation by and be delivering power to the facility's busbar by 2016. To assist in the preparation of its report, the Commission, in consultation with the Agency, may hire one or more experts or consultants, the costs of which shall be paid for by the owner of the initial clean coal facility. The Commission and Agency may begin the process of selecting such experts or consultants prior to receipt of the facility cost report.

(iii) General Assembly approval. The proposed sourcing agreements shall not take effect unless, based on the facility cost report and the Commission's report, the General Assembly enacts authorizing legislation approving (A) the projected price, stated in cents per kilowatthour, to be charged for electricity generated by the initial clean coal facility, (B) the projected impact on residential and
small business customers' bills over the life of the sourcing agreements, and (C) the maximum allowable return on equity for the project; and

(iv) Commission review. If the General Assembly enacts authorizing legislation pursuant to subparagraph (iii) approving a sourcing agreement, the Commission shall, within 90 days of such enactment, complete a review of such sourcing agreement. During such time period, the Commission shall implement any directive of the General Assembly, resolve any disputes between the parties to the sourcing agreement concerning the terms of such agreement, approve the form of such agreement, and issue an order finding that the sourcing agreement is prudent and reasonable.

The facility cost report shall be prepared as follows:

(A) The facility cost report shall be prepared by duly licensed engineering and construction firms detailing the estimated capital costs payable to one or more contractors or suppliers for the engineering, procurement and construction of the components comprising the initial clean coal facility and the estimated costs of operation and maintenance of the facility. The facility cost report shall include:

(i) an estimate of the capital cost of the core plant based on one or more front end engineering and design studies for the gasification island and
related facilities. The core plant shall include all civil, structural, mechanical, electrical, control, and safety systems.

(ii) an estimate of the capital cost of the balance of the plant, including any capital costs associated with sequestration of carbon dioxide emissions and all interconnects and interfaces required to operate the facility, such as transmission of electricity, construction or backfeed power supply, pipelines to transport substitute natural gas or carbon dioxide, potable water supply, natural gas supply, water supply, water discharge, landfill, access roads, and coal delivery.

The quoted construction costs shall be expressed in nominal dollars as of the date that the quote is prepared and shall include capitalized financing costs during construction, taxes, insurance, and other owner's costs, and an assumed escalation in materials and labor beyond the date as of which the construction cost quote is expressed.

(B) The front end engineering and design study for the gasification island and the cost study for the balance of plant shall include sufficient design work to permit quantification of major categories of materials, commodities and labor hours, and receipt of
quotes from vendors of major equipment required to construct and operate the clean coal facility.

(C) The facility cost report shall also include an operating and maintenance cost quote that will provide the estimated cost of delivered fuel, personnel, maintenance contracts, chemicals, catalysts, consumables, spares, and other fixed and variable operations and maintenance costs. The delivered fuel cost estimate will be provided by a recognized third party expert or experts in the fuel and transportation industries. The balance of the operating and maintenance cost quote, excluding delivered fuel costs, will be developed based on the inputs provided by duly licensed engineering and construction firms performing the construction cost quote, potential vendors under long-term service agreements and plant operating agreements, or recognized third party plant operator or operators.

The operating and maintenance cost quote (including the cost of the front end engineering and design study) shall be expressed in nominal dollars as of the date that the quote is prepared and shall include taxes, insurance, and other owner's costs, and an assumed escalation in materials and labor beyond the date as of which the operating and maintenance cost quote is expressed.
(D) The facility cost report shall also include an analysis of the initial clean coal facility's ability to deliver power and energy into the applicable regional transmission organization markets and an analysis of the expected capacity factor for the initial clean coal facility.

(E) Amounts paid to third parties unrelated to the owner or owners of the initial clean coal facility to prepare the core plant construction cost quote, including the front end engineering and design study, and the operating and maintenance cost quote will be reimbursed through Coal Development Bonds.

(5) Re-powering and retrofitting coal-fired power plants previously owned by Illinois utilities to qualify as clean coal facilities. During the 2009 procurement planning process and thereafter, the Agency and the Commission shall consider sourcing agreements covering electricity generated by power plants that were previously owned by Illinois utilities and that have been or will be converted into clean coal facilities, as defined by Section 1-10 of this Act. Pursuant to such procurement planning process, the owners of such facilities may propose to the Agency sourcing agreements with utilities and alternative retail electric suppliers required to comply with subsection (d) of this Section and item (5) of subsection (d) of Section 16-115 of the Public Utilities Act, covering
electricity generated by such facilities. In the case of sourcing agreements that are power purchase agreements, the contract price for electricity sales shall be established on a cost of service basis. In the case of sourcing agreements that are contracts for differences, the contract price from which the reference price is subtracted shall be established on a cost of service basis. The Agency and the Commission may approve any such utility sourcing agreements that do not exceed cost-based benchmarks developed by the procurement administrator, in consultation with the Commission staff, Agency staff and the procurement monitor, subject to Commission review and approval. The Commission shall have authority to inspect all books and records associated with these clean coal facilities during the term of any such contract.

(6) Costs incurred under this subsection (d) or pursuant to a contract entered into under this subsection (d) shall be deemed prudently incurred and reasonable in amount and the electric utility shall be entitled to full cost recovery pursuant to the tariffs filed with the Commission.

(d-5) Zero emission standard.

(1) Beginning with the planning year commencing on June 1, 2017, the procurement plans shall include cost-effective zero emission credits from zero emission resources in an amount equal to 16% of the actual amount of
electricity delivered by each electric utility to retail customers in the State during calendar year 2014. Notwithstanding whether a procurement event is conducted pursuant to Section 16-111.5 of the Public Utilities Act, the Agency and Commission shall immediately initiate an initial procurement process upon the effective date of this amendatory Act of the 99th General Assembly, which shall procure cost-effective zero emission credits from zero emission resources, in an amount equal to, for each planning year, 16% of each electric utility's annual retail sales of electricity to retail customers in the State during calendar year 2014.

The initial procurement plan and process shall be subject to the following provisions:

(A) To assist the Agency in preparing its proposed initial procurement plan, those zero emission resources that intend to participate in the procurement shall submit to the Agency the following information for each zero emission resource on or before the date established by the Agency:

(i) the in-service date and remaining useful life of the zero emission resource;

(ii) the projected zero emission credits to be generated over the remaining useful life of the zero emission resource;

(iii) the annual zero emission resource cost
projections, expressed on a per megawatthour basis, over the next 4 planning years, which shall include the following: operation and maintenance expenses; fully allocated overhead costs, which shall be allocated using the methodology developed by the Institute for Nuclear Power Operations; fuel expenditures; non-fuel capital expenditures; spent fuel expenditures; a return on working capital; and any other costs necessary for continued operations, provided that "necessary" means, for purposes of this item (iii), that the costs could reasonably be avoided only by ceasing operations of the zero emission resource. In addition, those cost projections shall be adjusted to reflect operational risks that include, but are not limited to, operational cost risk, which is the risk that operating costs will be higher than reasonably anticipated, and capacity factor risk, which is the risk that per megawatthour costs will be higher than anticipated because of a lower than expected capacity factor. The cost projections shall be further adjusted by a per megawatthour facility adjustment to reflect market risks that include, but are not limited to, liquidated damages risk, which is the risk of a forced outage and the associated costs of covering contractual
obligations; volatility risk, which is the risk that output from the resource may not be able to be sold at the same forward prices used as set forth in this paragraph (1); and basis risk, which is the risk that the difference between the nodal energy price for the resource and the associated zone-wide energy price will exceed the values calculated as set forth in this paragraph (1); and

(iv) a commitment to continue operating, for the duration of the contract or contracts executed pursuant to the initial procurement held under this subsection (d-5), the zero emission resource that produces the zero emission credits to be procured in the procurement.

(B) Zero emission resources that bid into the initial procurement must commit to deliver all zero emission credits from the zero emission resource during the remaining useful life of the resource, and each winning zero emission resource shall be compensated for each planning year in an amount that equals the difference between the weighted average of all zero emission resources' average annual zero emission resource cost, expressed on a price per megawatt-hour basis, for the applicable planning year and each zero emission resource's projected energy revenues and projected capacity revenues for the
applicable planning year. However, if the difference
is a sum that is less than zero, then no compensation
shall be provided to any entity. The components of this
calculation are defined as follows:

(i) Weighted average of all zero emission
resources' average annual zero emission resource
cost: during the first 4 planning years, the
weighted average of all zero emission resources'
average annual zero emission resource cost shall
be $42 per megawatthour. Thereafter, for each
applicable planning year, the Agency shall
calculate for each zero emission resource the
average annual zero emission resource cost over
the consecutive 4-year planning period ending
immediately prior to the applicable planning year,
and the average annual zero emission resource cost
over the consecutive 4-year planning period ending
on May 31 of the applicable planning year. The
Agency shall use the 4-year cost projections
submitted by zero emission resources pursuant to
subparagraph (D) of this paragraph (1), and the
averages calculated by the Agency shall be
expressed on a price per megawatthour basis for the
applicable year.

The weighted average of all zero emission
resources' average annual zero emission resource
cost for planning years commencing after the first 4 planning years shall be calculated using the following formula: the weighted average of all zero emission resources' average annual zero emission resource cost, expressed on a price per megawatt hour basis, established by the Commission for the planning year immediately preceding the applicable planning year multiplied by a ratio where the numerator is the weighted average of all zero emission resources' average annual zero emission resource costs over the consecutive 4-year planning period ending on May 31 of the applicable planning year and the denominator is the weighted average of all zero emission resources' average annual zero emission resource costs over the consecutive 4-year planning period ending immediately prior to the applicable planning year. The submissions and calculations required by this item (i) shall be made according to the schedule set forth in subparagraph (D) of this paragraph (1).

(ii) Projected energy revenues: the zero emission resource shall calculate projected energy revenues for the applicable planning year based on actual forward market prices as published by the Intercontinental Exchange, which shall be
calculated as the average forward market energy
price at the PJM Interconnection, LLC Northern
Illinois Hub for all trade dates during the
immediately preceding 12-month period that began
on April 1 and ended March 31 and adjusted to
reflect the historic basis price difference
between the Northern Illinois Hub and the average
day ahead price for energy during that period at
the generating facility bus that is producing the
credit.

(iii) Projected capacity revenues: for the
planning years commencing June 1, 2017, June 1,
2018, and June 1, 2019, the zero emission resource
shall calculate projected capacity revenues for
the applicable planning year based on
unit-specific market prices determined by the
applicable regional transmission organization's
procurement process, PJM Interconnection LLC or
the Midcontinent Independent System Operator,
Inc.; for planning years commencing after May 31,
2020, the zero emission resource shall calculate
projected capacity revenues for the applicable
planning year based on the zonal forward market
prices determined by the applicable regional
transmission organization's procurement process,
PJM Interconnection LLC or the Midcontinent
Independent System Operator, Inc.

(C) No later than 45 days after the effective date of this amendatory Act of the 99th General Assembly, the Agency shall submit to the Commission the proposed initial procurement plan. The plan shall be consistent with the provisions of this paragraph (1) and shall provide that winning bids shall be selected based on public interest criteria that include minimizing carbon dioxide emissions that result from electricity consumed in Illinois and minimizing sulfur dioxide, nitrogen oxide, and particulate matter emissions that adversely affect the citizens of this State. In particular, the selection of winning bids shall take into account the incremental environmental and reliability benefits resulting from the procurement, including any existing environmental and reliability benefits that are preserved by the procurement and would cease to exist if the procurement were not held. The Commission shall, after notice and hearing, but no later than 30 days after the Agency submits its plan, approve the plan or approve with modification. The Agency shall conduct the request for proposals process as soon as reasonably practicable after the effective date of this amendatory Act of the 99th General Assembly, and each utility shall enter into binding contractual arrangements with the winning suppliers.
The procurement shall be completed no later than May 31, 2017. Notwithstanding the provisions of this subparagraph (C), the Agency and Commission shall conduct the procurement and plan approval processes required by this subsection (d-5) in conjunction with the procurement and plan approval processes required by subsection (c) of this Section and Section 16-111.5 of the Public Utilities Act, to the extent practicable.

Following the initial procurement event described in this paragraph (1), the Agency and Commission shall initiate additional procurement processes, as necessary, to replace any zero emission credits that were not delivered due to a supplier default or in the event that additional zero emission credits must be procured. Any such processes shall be conducted regardless of whether a procurement event is conducted pursuant to Section 16-111.5 of the Public Utilities Act. Each utility shall enter into binding contractual arrangements with the winning suppliers.

(D) Following the initial procurement event described in this paragraph (1), each zero emission resource that has executed a contract to deliver zero emission credits pursuant to this paragraph (1) shall submit its updated zero emission resource cost projections for the next 4 planning years, and projected energy revenues and projected capacity
revenues for the next planning years, as those costs and revenues are defined in subparagraphs (A) and (B) of this paragraph (1), no later than April 10, 2018 and each April 10 thereafter. Consistent with subparagraph (B), the Agency shall determine the weighted average of all zero emission resources' average annual zero emission resource cost for the planning year that commences 4 years after the current planning year, on a per megawatthour basis, and shall calculate the payments to be made under each contract for the next planning year based on the updated projected energy revenues and capacity revenues submitted by the zero emission resources. The Agency shall publish the weighted average of all zero emission resources' average annual zero emission resource cost and payment calculations no later than May 25, 2018 and every May 25 thereafter.

(E) The contracts executed pursuant to this subsection (d-5) shall provide that the Agency, Commission, or zero emission resource may terminate a contract or contracts to be effective on June 1 of a given planning year, provided that notice of such termination must be made at least 4 years prior to the effective date of such termination and the earliest date on which a contract termination may take effect under this subparagraph (C) is the earlier of June 1,
2023 or 2 years after the State has adopted and
implemented a plan pursuant to the provisions of
Section 111(d) of the federal Clean Air Act, 42 U.S. C.
7411(d), as amended.

(F) Notwithstanding the requirements of this
subsection (d-5), the contracts executed pursuant to
this subsection (d-5) shall provide that the zero
emission resource may, as applicable, suspend or
terminate performance under the contracts in the
following instances:

(i) A zero emission resource shall be excused
from its performance under the contract for any
cause beyond the control of the resource,
including, but not restricted to, acts of God,
flood, drought, earthquake, storm, fire,
lightning, epidemic, war, riot, civil disturbance
or disobedience, labor dispute, labor or material
shortage, sabotage, acts of public enemy,
explosions, orders, regulations or restrictions
imposed by governmental, military, or lawfully
established civilian authorities, which, in any of
the foregoing cases, by exercise of commercially
reasonable efforts the zero emission resource
could not reasonably have been expected to avoid,
and which, by the exercise of commercially
reasonable efforts, it has been unable to
overcome. In such event, the zero emission resource shall be excused from performance for the duration of the event, including, but not limited to, delivery of zero emission credits, and no payment shall be due to the zero emission resource during the duration of the event.

(ii) A zero emission resource shall be permitted to terminate the contract if legislation is enacted into law by the General Assembly that imposes or authorizes a new tax, special assessment, or fee on the generation of electricity, the ownership or leasehold of a generating unit, or the privilege or occupation of such generation, ownership, or leasehold of generation units by a zero emission resource. However, the provisions of this item (ii) do not apply to any generally applicable tax, special assessment or fee, or requirements imposed by federal law.

(iii) A zero emission resource shall be permitted to terminate the contract in the event that the resource requires capital expenditures that were neither known nor reasonably foreseeable at the time it executed the contract and that a prudent owner or operator of such resource would not undertake.
(iv) A zero emission resource shall be permitted to terminate the contract in the event the Nuclear Regulatory Commission terminates the resource's license.

(G) For purposes of this subsection (d-5), "cost-effective" means that the costs of procuring zero emission credits do not cause the limit stated in paragraph (2) of this subsection (d-5) to be exceeded.

(2) For purposes of this subsection (d-5), the required procurement of cost-effective zero emission credits for a particular period shall be measured as a percentage of the actual amount of electricity (megawatthours) delivered by the electric utility to all retail customers in the planning year ending immediately prior to the procurement, as incorporated in the procurement plan approved by the Commission. For purposes of this subsection (d-5), the amount paid per kilowatthour means the total amount paid for electric service expressed on a per kilowatthour basis. For purposes of this subsection (d-5), the total amount paid for electric service includes, without limitation, amounts paid for supply, transmission, distribution, surcharges, and add-on taxes.

Notwithstanding the requirements of this subsection (d-5), the total of zero emission credits procured pursuant to a procurement plan shall be subject to the limitations of this paragraph (2). For each 4-year period, the
procurement shall be reduced for all retail customers based on the amount necessary to limit the annual estimated average net increase over each period due to the costs of these credits included in the amounts paid by eligible retail customers in connection with electric service to no more than 2.015% of the amount paid per kilowatthour by eligible retail customers during the year ending May 31, 2009. The result of this computation shall apply to and reduce the procurement for all retail customers, and all those customers shall pay the same single, uniform cents per kilowatthour charge pursuant to subsection (k) of Section 16-108 of the Public Utilities Act. To arrive at a maximum dollar amount of zero emission credits to be procured for the particular planning year, the resulting per kilowatthour amount shall be applied to the actual amount of kilowatthours of electricity delivered by the electric utility in the planning year immediately prior to the procurement, to all retail customers in its service territory. The calculations required by this paragraph (2) shall be made only once for each procurement plan year. Once the determination as to the amount of zero emission credits to procure is made based on the calculations set forth in this paragraph (2), no subsequent rate impact determinations shall be made and no adjustments to those contract amounts shall be allowed. All costs incurred under those contracts and in implementing this subsection (d-5)
shall be recovered by the electric utility as provided in this Section.

No later than June 30, 2019, the Commission shall review the limitation on the amount of zero emission credits procured pursuant to this subsection (d-5) and report to the General Assembly its findings as to whether that limitation unduly constrains the procurement of cost-effective zero emission credits.

(3) Cost-effective zero emission credits procured from zero emission resources shall satisfy the applicable definitions set forth in Section 1-10 of this Act.

(4) The electric utility shall retire all zero emission credits used to comply with the requirements of this subsection (d-5).

(5) Electric utilities shall be entitled to recover all of the costs associated with the procurement of zero emission credits through an automatic adjustment clause tariff in accordance with subsection (k) of Section 16-108 of the Public Utilities Act.

(e) The draft procurement plans are subject to public comment, as required by Section 16-111.5 of the Public Utilities Act.

(f) The Agency shall submit the final procurement plan to the Commission. The Agency shall revise a procurement plan if the Commission determines that it does not meet the standards set forth in Section 16-111.5 of the Public Utilities Act.
(g) The Agency shall assess fees to each affected utility to recover the costs incurred in preparation of the annual procurement plan for the utility.

(h) The Agency shall assess fees to each bidder to recover the costs incurred in connection with a competitive procurement process.

(i) A renewable energy credit, carbon emission credit, or zero emission credit can only be used once to comply with a single portfolio or other standard as set forth in subsection (c), subsection (d), or subsection (d-5) of this Section, respectively. A renewable energy credit, carbon emission credit, or zero emission credit cannot be used to satisfy the requirements of more than one standard. In the event more than one type of credit is issued for the same megawatt hour of energy, only one credit can be used to satisfy the requirements of a single standard. After such use, the credit must be retired together with any other credits issued for the same megawatt hour of energy.

(Source: P.A. 97-325, eff. 8-12-11; 97-616, eff. 10-26-11; 97-618, eff. 10-26-11; 97-658, eff. 1-13-12; 97-813, eff. 7-13-12; 98-463, eff. 8-16-13.)

Section 10. The Public Utilities Act is amended by changing Sections 8-103, 8-104, 16-107, 16-107.5, 16-108, 16-111.5, 16-111.5B, 16-111.7, 16-115D, and 16-127 and by adding Sections 8-103B, 9-105, 9-107, 16-103.3, 16-107.6, 16-107.7, 16-108.9,
and 16-108.10 as follows:

(220 ILCS 5/8-103)
Sec. 8-103. Energy efficiency and demand-response measures.

(a) It is the policy of the State that electric utilities are required to use cost-effective energy efficiency and demand-response measures to reduce delivery load. Requiring investment in cost-effective energy efficiency and demand-response measures will reduce direct and indirect costs to consumers by decreasing environmental impacts and by avoiding or delaying the need for new generation, transmission, and distribution infrastructure. It serves the public interest to allow electric utilities to recover costs for reasonably and prudently incurred expenses for energy efficiency and demand-response measures. As used in this Section, "cost-effective" means that the measures satisfy the total resource cost test. The low-income measures described in subsection (f)(4) of this Section shall not be required to meet the total resource cost test. For purposes of this Section, the terms "energy-efficiency", "demand-response", "electric utility", and "total resource cost test" shall have the meanings set forth in the Illinois Power Agency Act. For purposes of this Section, the amount per kilowatthour means the total amount paid for electric service expressed on a per kilowatthour basis. For purposes of this Section, the total
amount paid for electric service includes without limitation estimated amounts paid for supply, transmission, distribution, surcharges, and add-on-taxes.

(a-5) This Section applies to electric utilities serving 3,000,000 or less retail customers in the State. Through December 31, 2017, this Section also applies to electric utilities serving more than 3,000,000 retail customers in the State.

(b) Electric utilities shall implement cost-effective energy efficiency measures to meet the following incremental annual energy savings goals:

1. 0.2% of energy delivered in the year commencing June 1, 2008;
2. 0.4% of energy delivered in the year commencing June 1, 2009;
3. 0.6% of energy delivered in the year commencing June 1, 2010;
4. 0.8% of energy delivered in the year commencing June 1, 2011;
5. 1% of energy delivered in the year commencing June 1, 2012;
6. 1.4% of energy delivered in the year commencing June 1, 2013;
7. 1.8% of energy delivered in the year commencing June 1, 2014; and
8. 2% of energy delivered in the year commencing June
Electric utilities may comply with this subsection (b) by meeting the annual incremental savings goal in the applicable year or by showing that the total cumulative annual savings within a 3-year planning period associated with measures implemented after May 31, 2014 was equal to the sum of each annual incremental savings requirement from May 31, 2014 through the end of the applicable year.

(c) Electric utilities shall implement cost-effective demand-response measures to reduce peak demand by 0.1% over the prior year for eligible retail customers, as defined in Section 16-111.5 of this Act, and for customers that elect hourly service from the utility pursuant to Section 16-107 of this Act, provided those customers have not been declared competitive. This requirement commences June 1, 2008 and continues for 10 years.

(d) Notwithstanding the requirements of subsections (b) and (c) of this Section, an electric utility shall reduce the amount of energy efficiency and demand-response measures implemented over a 3-year planning period by an amount necessary to limit the estimated average annual increase in the amounts paid by retail customers in connection with electric service due to the cost of those measures to:

(1) in 2008, no more than 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007;
(2) in 2009, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2008 or 1% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007;

(3) in 2010, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2009 or 1.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007;

(4) in 2011, the greater of an additional 0.5% of the amount paid per kilowatthour by those customers during the year ending May 31, 2010 or 2% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007; and

(5) thereafter, the amount of energy efficiency and demand-response measures implemented for any single year shall be reduced by an amount necessary to limit the estimated average net increase due to the cost of these measures included in the amounts paid by eligible retail customers in connection with electric service to no more than the greater of 2.015% of the amount paid per kilowatthour by those customers during the year ending May 31, 2007 or the incremental amount per kilowatthour paid for these measures in 2011.

No later than June 30, 2011, the Commission shall review
the limitation on the amount of energy efficiency and
demand-response measures implemented pursuant to this Section
and report to the General Assembly its findings as to whether
that limitation unduly constrains the procurement of energy
efficiency and demand-response measures.

(e) Electric utilities shall be responsible for overseeing
the design, development, and filing of energy efficiency and
demand-response plans with the Commission. Electric utilities
shall implement 100% of the demand-response measures in the
plans. Electric utilities shall implement 75% of the energy
efficiency measures approved by the Commission, and may, as
part of that implementation, outsource various aspects of
program development and implementation. The remaining 25% of
those energy efficiency measures approved by the Commission
shall be implemented by the Department of Commerce and Economic
Opportunity, and must be designed in conjunction with the
utility and the filing process. The Department may outsource
development and implementation of energy efficiency measures.
A minimum of 10% of the entire portfolio of cost-effective
energy efficiency measures shall be procured from units of
local government, municipal corporations, school districts,
and community college districts. The Department shall
coordinate the implementation of these measures.

The apportionment of the dollars to cover the costs to
implement the Department's share of the portfolio of energy
efficiency measures shall be made to the Department once the
Department has executed rebate agreements, grants, or contracts for energy efficiency measures and provided supporting documentation for those rebate agreements, grants, and contracts to the utility. The Department is authorized to adopt any rules necessary and prescribe procedures in order to ensure compliance by applicants in carrying out the purposes of rebate agreements for energy efficiency measures implemented by the Department made under this Section.

The details of the measures implemented by the Department shall be submitted by the Department to the Commission in connection with the utility's filing regarding the energy efficiency and demand-response measures that the utility implements.

A utility providing approved energy efficiency and demand-response measures in the State shall be permitted to recover costs of those measures through an automatic adjustment clause tariff filed with and approved by the Commission. The tariff shall be established outside the context of a general rate case. Each year the Commission shall initiate a review to reconcile any amounts collected with the actual costs and to determine the required adjustment to the annual tariff factor to match annual expenditures.

Each utility shall include, in its recovery of costs, the costs estimated for both the utility's and the Department's implementation of energy efficiency and demand-response measures. Costs collected by the utility for measures
implemented by the Department shall be submitted to the Department pursuant to Section 605-323 of the Civil Administrative Code of Illinois, shall be deposited into the Energy Efficiency Portfolio Standards Fund, and shall be used by the Department solely for the purpose of implementing these measures. A utility shall not be required to advance any moneys to the Department but only to forward such funds as it has collected. The Department shall report to the Commission on an annual basis regarding the costs actually incurred by the Department in the implementation of the measures. Any changes to the costs of energy efficiency measures as a result of plan modifications shall be appropriately reflected in amounts recovered by the utility and turned over to the Department.

The portfolio of measures, administered by both the utilities and the Department, shall, in combination, be designed to achieve the annual savings targets described in subsections (b) and (c) of this Section, as modified by subsection (d) of this Section.

The utility and the Department shall agree upon a reasonable portfolio of measures and determine the measurable corresponding percentage of the savings goals associated with measures implemented by the utility or Department.

No utility shall be assessed a penalty under subsection (f) of this Section for failure to make a timely filing if that failure is the result of a lack of agreement with the Department with respect to the allocation of responsibilities.
or related costs or target assignments. In that case, the Department and the utility shall file their respective plans with the Commission and the Commission shall determine an appropriate division of measures and programs that meets the requirements of this Section.

If the Department is unable to meet incremental annual performance goals for the portion of the portfolio implemented by the Department, then the utility and the Department shall jointly submit a modified filing to the Commission explaining the performance shortfall and recommending an appropriate course going forward, including any program modifications that may be appropriate in light of the evaluations conducted under item (7) of subsection (f) of this Section. In this case, the utility obligation to collect the Department's costs and turn over those funds to the Department under this subsection (e) shall continue only if the Commission approves the modifications to the plan proposed by the Department.

(f) No later than November 15, 2007, each electric utility shall file an energy efficiency and demand-response plan with the Commission to meet the energy efficiency and demand-response standards for 2008 through 2010. No later than October 1, 2010, each electric utility shall file an energy efficiency and demand-response plan with the Commission to meet the energy efficiency and demand-response standards for 2011 through 2013. Every 3 years thereafter, each electric utility shall file, no later than September 1, an energy efficiency and
demand-response plan with the Commission. If a utility does not file such a plan by September 1 of an applicable year, it shall face a penalty of $100,000 per day until the plan is filed. Each utility's plan shall set forth the utility's proposals to meet the utility's portion of the energy efficiency standards identified in subsection (b) and the demand-response standards identified in subsection (c) of this Section as modified by subsections (d) and (e), taking into account the unique circumstances of the utility's service territory. The Commission shall seek public comment on the utility's plan and shall issue an order approving or disapproving each plan within 5 months after its submission. If the Commission disapproves a plan, the Commission shall, within 30 days, describe in detail the reasons for the disapproval and describe a path by which the utility may file a revised draft of the plan to address the Commission's concerns satisfactorily. If the utility does not refile with the Commission within 60 days, the utility shall be subject to penalties at a rate of $100,000 per day until the plan is filed. This process shall continue, and penalties shall accrue, until the utility has successfully filed a portfolio of energy efficiency and demand-response measures. Penalties shall be deposited into the Energy Efficiency Trust Fund. In submitting proposed energy efficiency and demand-response plans and funding levels to meet the savings goals adopted by this Act the utility shall:

(1) Demonstrate that its proposed energy efficiency
and demand-response measures will achieve the requirements
that are identified in subsections (b) and (c) of this
Section, as modified by subsections (d) and (e).

(2) Present specific proposals to implement new
building and appliance standards that have been placed into
effect.

(3) Present estimates of the total amount paid for
electric service expressed on a per kilowatthour basis
associated with the proposed portfolio of measures
designed to meet the requirements that are identified in
subsections (b) and (c) of this Section, as modified by
subsections (d) and (e).

(4) Coordinate with the Department to present a
portfolio of energy efficiency measures proportionate to
the share of total annual utility revenues in Illinois from
households at or below 150% of the poverty level. The
energy efficiency programs shall be targeted to households
with incomes at or below 80% of area median income.

(5) Demonstrate that its overall portfolio of energy
efficiency and demand-response measures, not including
programs covered by item (4) of this subsection (f), are
cost-effective using the total resource cost test and
represent a diverse cross-section of opportunities for
customers of all rate classes to participate in the
programs.

(6) Include a proposed cost-recovery tariff mechanism
to fund the proposed energy efficiency and demand-response measures and to ensure the recovery of the prudently and reasonably incurred costs of Commission-approved programs.

(7) Provide for an annual independent evaluation of the performance of the cost-effectiveness of the utility's portfolio of measures and the Department's portfolio of measures, as well as a full review of the 3-year results of the broader net program impacts and, to the extent practical, for adjustment of the measures on a going-forward basis as a result of the evaluations. The resources dedicated to evaluation shall not exceed 3% of portfolio resources in any given year.

(g) No more than 3% of energy efficiency and demand-response program revenue may be allocated for demonstration of breakthrough equipment and devices.

(h) This Section does not apply to an electric utility that on December 31, 2005 provided electric service to fewer than 100,000 customers in Illinois.

(i) If, after 2 years, an electric utility fails to meet the efficiency standard specified in subsection (b) of this Section, as modified by subsections (d) and (e), it shall make a contribution to the Low-Income Home Energy Assistance Program. The combined total liability for failure to meet the goal shall be $1,000,000, which shall be assessed as follows: a large electric utility shall pay $665,000, and a medium electric utility shall pay $335,000. If, after 3 years, an
electric utility fails to meet the efficiency standard specified in subsection (b) of this Section, as modified by subsections (d) and (e), it shall make a contribution to the Low-Income Home Energy Assistance Program. The combined total liability for failure to meet the goal shall be $1,000,000, which shall be assessed as follows: a large electric utility shall pay $665,000, and a medium electric utility shall pay $335,000. In addition, the responsibility for implementing the energy efficiency measures of the utility making the payment shall be transferred to the Illinois Power Agency if, after 3 years, or in any subsequent 3-year period, the utility fails to meet the efficiency standard specified in subsection (b) of this Section, as modified by subsections (d) and (e). The Agency shall implement a competitive procurement program to procure resources necessary to meet the standards specified in this Section as modified by subsections (d) and (e), with costs for those resources to be recovered in the same manner as products purchased through the procurement plan as provided in Section 16-111.5. The Director shall implement this requirement in connection with the procurement plan as provided in Section 16-111.5.

For purposes of this Section, (i) a "large electric utility" is an electric utility that, on December 31, 2005, served more than 2,000,000 electric customers in Illinois; (ii) a "medium electric utility" is an electric utility that, on December 31, 2005, served 2,000,000 or fewer but more than
100,000 electric customers in Illinois; and (iii) Illinois electric utilities that are affiliated by virtue of a common parent company are considered a single electric utility.

(j) If, after 3 years, or any subsequent 3-year period, the Department fails to implement the Department's share of energy efficiency measures required by the standards in subsection (b), then the Illinois Power Agency may assume responsibility for and control of the Department's share of the required energy efficiency measures. The Agency shall implement a competitive procurement program to procure resources necessary to meet the standards specified in this Section, with the costs of these resources to be recovered in the same manner as provided for the Department in this Section.

(k) No electric utility shall be deemed to have failed to meet the energy efficiency standards to the extent any such failure is due to a failure of the Department or the Agency.

(l) Electric utilities' 3-year energy efficiency and demand-response plans approved by the Commission on or before the effective date of this amendatory Act of the 99th General Assembly for the period June 1, 2014 through May 31, 2017 shall continue to be in force and effect through December 31, 2017 so that the energy efficiency programs set forth in those plans continue to be offered during the period June 1, 2017 through December 31, 2017. Each utility is authorized to increase, on a pro rata basis, the energy savings goals and budgets approved in its plan to reflect the additional 7 months of the plan's
operation.

(Source: P.A. 97-616, eff. 10-26-11; 97-841, eff. 7-20-12;
98-90, eff. 7-15-13.)

(220 ILCS 5/8-103B new)

Sec. 8-103B. Energy efficiency and demand-response measures.

(a) It is the policy of the State that electric utilities are required to use cost-effective energy efficiency and demand-response measures to reduce delivery load. Requiring investment in cost-effective energy efficiency and demand-response measures will reduce direct and indirect costs to consumers by decreasing environmental impacts and by avoiding or delaying the need for new generation, transmission, and distribution infrastructure. It serves the public interest to allow electric utilities to recover costs for reasonably and prudently incurred expenses for energy efficiency and demand-response measures. As used in this Section, "cost-effective" means that the measures satisfy the total resource cost test. The low-income measures described in subsection (c) of this Section shall not be required to meet the total resource cost test. For purposes of this Section, the terms "energy-efficiency", "demand-response", "electric utility", and "total resource cost test" have the meanings set forth in the Illinois Power Agency Act. For purposes of this Section, the amount per kilowatthour means the total amount
paid for electric service expressed on a per kilowatthour basis. For purposes of this Section, the total amount paid for electric service includes, without limitation, estimated amounts paid for supply, transmission, distribution, surcharges, and add-on taxes.

(a-5) After December 31, 2017, this Section applies to electric utilities serving more than 3,000,000 retail customers in the State.

(b) For purposes of this Section, electric utilities subject to this Section shall be deemed to have achieved a cumulative persisting annual savings of 6.6%, or 5,777,692 megawatt-hours (MWhs), for the year ending December 31, 2017, which is based on the deemed average weather normalized sales of electric power and energy during calendar years 2014, 2015, and 2016 of 88,000,000 MWhs. The 88,000,000 MWhs of deemed electric power and energy sales shall also serve as the baseline value for calculating the cumulative persisting annual savings in subsection (b-5). After 2017, the deemed value of cumulative persisting annual savings shall be reduced each year, as follows, and the applicable value shall be applied to and count toward the utility's achievement of the cumulative persisting annual savings goals set forth in subsection (b-5):

(1) 5.8%, or 5,071,018 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2018;
(2) 5.2%, or 4,553,371 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2019;

(3) 4.5%, or 3,998,012 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2020;

(4) 4%, or 3,533,219 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2021;

(5) 3.5%, or 3,108,290 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2022;

(6) 3.1%, or 2,738,689 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2023;

(7) 2.8%, or 2,463,055 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2024;

(8) 2.5%, or 2,221,716 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2025;

(9) 2.3%, or 2,017,109 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2026;

(10) 2.1%, or 1,822,754 MWhs, deemed cumulative persisting annual savings for the year ending December 31,
2027;

(11) 1.8%, or 1,624,769 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2028;

(12) 1.7%, or 1,460,039 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2029; and

(13) 1.5%, or 1,181,647 MWhs, deemed cumulative persisting annual savings for the year ending December 31, 2030.

For purposes of this Section, "cumulative persisting annual savings" means the total electric energy savings in a given year from measures installed in that year or in previous years that are still operational and providing savings in that year because the measures have not yet reached the end of their useful lives.

(b-5) Beginning in 2018, electric utilities shall achieve the following cumulative persisting annual savings goals, as modified by subsection (f) of this Section and as compared to the deemed baseline of 88,000,000 MWhs of electric power and energy sales set forth in subsection (b), through the implementation of cost-effective energy efficiency measures during the applicable year and in prior years by the utility and, if applicable, the Department:

(1) 8% cumulative persisting annual savings for the year ending December 31, 2018;
(2) 9.5% cumulative persisting annual savings for the year ending December 31, 2019;
(3) 11% cumulative persisting annual savings for the year ending December 31, 2020;
(4) 12.5% cumulative persisting annual savings for the year ending December 31, 2021;
(5) 14% cumulative persisting annual savings for the year ending December 31, 2022;
(6) 15.5% cumulative persisting annual savings for the year ending December 31, 2023;
(7) 17% cumulative persisting annual savings for the year ending December 31, 2024;
(8) 18.5% cumulative persisting annual savings for the year ending December 31, 2025;
(9) 19.4% cumulative persisting annual savings for the year ending December 31, 2026;
(10) 20.3% cumulative persisting annual savings for the year ending December 31, 2027;
(11) 21.2% cumulative persisting annual savings for the year ending December 31, 2028;
(12) 22.1% cumulative persisting annual savings for the year ending December 31, 2029; and
(13) 23% cumulative persisting annual savings for the year ending December 31, 2030.

(b-10) Each electric utility that serves more than 3,000,000 retail customers in the State shall include
cost-effective voltage optimization measures in its plans submitted pursuant to subsection (f) or (g) of this Section, and the costs incurred by a utility to implement the measures pursuant to a Commission-approved plan shall be recovered, at the utility's election, either through the automatic adjustment clause tariff approved under subsection (d) of this Section, an energy efficiency formula rate tariff approved under subsection (d) of this Section, or pursuant to the provisions of Article IX or Section 16-108.5 of this Act. For purposes of this Section, the measure life of voltage optimization measures shall be 15 years. The measure life period is independent of the depreciation rate of the voltage optimization assets deployed.

In the event an electric utility jointly offers an energy efficiency measure or program with a gas utility pursuant to plans approved under this Section and Section 8-104 of this Act, the electric utility may continue offering the program, including the gas energy efficiency measures, in the event the gas utility discontinues funding the program. In that event, up to 30% of the annual savings goal calculated pursuant to subsection (b) of this Section may be met through savings of fuels other than electricity, and the energy savings value associated with such other fuels shall be converted to electric energy savings on an equivalent Btu basis for the premises. However, the utility shall prioritize gas savings for low-income residential customers to the extent practicable. An
electric utility may recover the costs of offering the gas
energy efficiency measures pursuant to this subsection (b-10).

For those energy efficiency measures or programs that are
not jointly offered with a gas utility pursuant to plans
approved under this Section and Section 8-104, the electric
utility may count savings of fuels other than electricity
toward the achievement of its annual savings goal, and the
energy savings value associated with such other fuels shall be
converted to electric energy savings on an equivalent Btu basis
at the premises.

(c) Electric utilities shall be responsible for overseeing
the design, development, and filing of energy efficiency plans
with the Commission and may, as part of that implementation,
outsource various aspects of program development and
implementation. A minimum of 10% of the entire portfolio budget
for a given year shall be used to procure cost-effective energy
efficiency measures from units of local government, municipal
corporations, school districts, public housing, and community
college districts, provided that a minimum percentage of
available funds shall be used to procure energy efficiency from
public housing, which percentage shall be equal to public
housing's share of public building energy consumption.

The utilities shall also implement energy efficiency
measures targeted at low-income households, which, for
purposes of this Section, shall be defined as households at or
below 80% of area median income, and expenditures to implement
the measures shall be no less than $50,000,000 per year. For
the multi-year plan commencing on January 1, 2018, the energy
savings attributable to such programs shall not be less than
29,239,766 kilowatt-hours per year for the years commencing
January 1, 2018 and January 1, 2019. For every 2-year period
thereafter, the utility shall submit an informational filing to
the Commission 90 days prior to the beginning of the 2-year
period that calculates the (i) cost per kilowatt-hour of energy
savings to be achieved and (ii) the resulting annual energy
savings to be achieved each year, under the low-income programs
during the applicable 2-year period.

Each electric utility shall assess opportunities to
implement cost-effective energy efficiency measures and
programs through a public housing authority or authorities
located in its service territory. If such opportunities are
identified, the utility shall propose such measures and
programs to address the opportunities. Expenditures to address
such opportunities shall be credited toward the minimum
procurement and expenditure requirements set forth in this
subsection (c).

Implementation of energy efficiency measures and programs
targeted at low-income households should be contracted, when it
is practicable, to independent third parties that have
demonstrated capabilities to serve such households, with a
preference for not-for-profit entities and government agencies
that have existing relationships with or experience serving
low-income communities in the State.

Each electric utility shall develop and implement reporting procedures that address and assist in determining the amount of energy savings that can be applied to the low-income procurement and expenditure requirements set forth in this subsection (c).

The electric utilities shall also convene a low-income energy efficiency advisory committee to assist in the design and evaluation of the low-income energy efficiency programs. The committee shall be comprised of the electric utilities subject to the requirements of this Section, the gas utilities subject to the requirements of Section 8-104 of this Act, the utilities’ low-income energy efficiency implementation contractors, and representatives of community-based organizations.

(d) A utility providing approved energy efficiency measures and, if applicable, demand-response measures in the State shall be permitted to recover costs of those measures as follows:

(1) The utility may recover its costs through an automatic adjustment clause tariff filed with and approved by the Commission. The tariff shall be established outside the context of a general rate case. Each year the Commission shall initiate a review to reconcile any amounts collected with the actual costs and to determine the required adjustment to the annual tariff factor to match
annual expenditures.

(2) A utility may recover its costs through an energy efficiency formula rate approved by the Commission pursuant to a filing under subsection (f) or (g) of this Section, which shall specify the cost components that form the basis of the rate charged to customers with sufficient specificity to operate in a standardized manner and be updated annually with transparent information that reflects the utility's actual costs to be recovered during the applicable rate year, which is the period beginning with the first billing day of January and extending through the last billing day of the following December. The energy efficiency formula rate shall be implemented through a tariff filed with the Commission under subsection (f) or (g) of this Section that is consistent with the provisions of this paragraph (2) and that shall be applicable to all delivery services customers. The Commission shall conduct an investigation of the tariff in a manner consistent with the provisions of this paragraph (2), subsection (f) or (g) of this Section, and the provisions of Article IX of this Act to the extent they do not conflict with this paragraph (2). The energy efficiency formula rate approved by the Commission shall remain in effect at the discretion of the utility and shall do the following:

(A) Provide for the recovery of the utility's actual costs incurred under this Section that are
prudently incurred and reasonable in amount consistent with Commission practice and law. The sole fact that a cost differs from that incurred in a prior calendar year or that an investment is different from that made in a prior calendar year shall not imply the imprudence or unreasonableness of that cost or investment.

(B) Reflect the utility's actual year-end capital structure for the applicable calendar year, excluding goodwill, subject to a determination of prudence and reasonableness consistent with Commission practice and law.

(C) Include a cost of equity, which shall be calculated as the sum of the following:

   (i) the average for the applicable calendar year of the monthly average yields of 30-year U.S. Treasury bonds published by the Board of Governors of the Federal Reserve System in its weekly H.15 Statistical Release or successor publication; and

   (ii) 580 basis points.

At such time as the Board of Governors of the Federal Reserve System ceases to include the monthly average yields of 30-year U.S. Treasury bonds in its weekly H.15 Statistical Release or successor publication, the monthly average yields of the U.S. Treasury bonds then having the longest duration published by the Board of Governors in its weekly H.15
Statistical Release or successor publication shall instead be used for purposes of this paragraph (2).

(D) Permit and set forth protocols, subject to a determination of prudence and reasonableness consistent with Commission practice and law, for the following:

  (i) recovery of incentive compensation expense that is based on the achievement of operational metrics, including metrics related to budget controls, outage duration and frequency, safety, customer service, efficiency and productivity, and environmental compliance; however, this protocol shall not apply if such expense related to costs incurred under this Section is recovered under Article IX or Section 16-108.5 of this Act;

  (ii) recovery of pension and other post-employment benefits expense, provided that such costs are supported by an actuarial study; however, this protocol shall not apply if such expense related to costs incurred under this Section is recovered under Article IX or Section 16-108.5 of this Act;
(iii) recovery of existing regulatory assets over the periods previously authorized by the Commission;
(iv) as described in subsection (e), amortization of costs incurred under this Section; and
(v) projected, weather normalized billing determinants for the applicable rate year.

(E) Provide for an annual reconciliation, as described in paragraph (3) of this subsection (d), less any deferred taxes related to the reconciliation, with interest at an annual rate of return equal to the utility's weighted average cost of capital, including a revenue conversion factor calculated to recover or refund all additional income taxes that may be payable or receivable as a result of that return, of the energy efficiency revenue requirement reflected in rates for each calendar year, beginning with the calendar year in which the utility files its energy efficiency formula rate tariff pursuant to this paragraph (2), with what the revenue requirement would have been had the actual cost information for the applicable calendar year been available at the filing date.

The utility shall file, together with its tariff, the projected costs to be incurred by the utility during the rate year pursuant the utility's multi-year plan approved
under subsection (f) or (g) of this Section, including, but
not limited to, the projected capital investment costs and
projected regulatory asset balances with correspondingly
updated depreciation and amortization reserves and
expense, that shall populate the energy efficiency formula
rate and set the initial rates under the formula.

The Commission shall review the proposed tariff in
conjunction with its review of a proposed multi-year plan,
as specified in paragraph (5) of subsection (g) of this
Section. The review shall be based on the same evidentiary
standards, including, but not limited to, those concerning
the prudence and reasonableness of the costs incurred by
the utility, the Commission applies in a hearing to review
a filing for a general increase in rates under Article IX
of this Act. The initial rates shall take effect beginning
with the January monthly billing period following the
Commission's approval.

Rate design and cost allocation across customer
classes shall be consistent with the utility's automatic
adjustment clause tariff in effect on the effective date of
this amendatory Act of the 99th General Assembly.

In the event the energy efficiency formula rate is
terminated, the then current rates shall remain in effect
until such time as the energy efficiency costs are
incorporated into new rates that are set pursuant to this
subsection (d) or Article IX of this Act, subject to
retroactive rate adjustment, with interest, to reconcile rates charged with actual costs.

(3) The provisions of this paragraph (3) shall only apply to an electric utility that has elected to file an energy efficiency formula rate under paragraph (2) of this subsection (d). Subsequent to the Commission's issuance of an order approving the utility's energy efficiency formula rate structure and protocols, and initial rates under paragraph (2) of this subsection (d), the utility shall file, on or before June 1 of each year, with the Chief Clerk of the Commission its updated cost inputs to the energy efficiency formula rate for the applicable rate year and the corresponding new charges. Each such filing shall conform to the following requirements and include the following information:

(A) The inputs to the energy efficiency formula rate for the applicable rate year shall be based on the projected costs to be incurred by the utility during the rate year pursuant to the utility's multi-year plan approved under subsection (f) or (g) of this Section, including, but not limited to, projected capital investment costs and projected regulatory asset balances with correspondingly updated depreciation and amortization reserves and expense. The filing shall also include a reconciliation of the energy efficiency revenue requirement that was in effect for the prior
rate year (as set by the cost inputs for the prior rate year) with the actual revenue requirement for the prior rate year (determined using a year-end rate base) that uses amounts reflected in the applicable FERC Form 1 that reports the actual costs for the prior rate year. Any over-collection or under-collection indicated by such reconciliation shall be reflected as a credit against, or recovered as an additional charge to, respectively, with interest calculated at a rate equal to the utility's weighted average cost of capital approved by the Commission for the prior rate year, the charges for the applicable rate year. Such over-collection or under-collection shall be adjusted to remove any deferred taxes related to the reconciliation, for purposes of calculating interest at an annual rate of return equal to the utility's weighted average cost of capital approved by the Commission for the prior rate year, including a revenue conversion factor calculated to recover or refund all additional income taxes that may be payable or receivable as a result of that return. Each reconciliation shall be certified by the participating utility in the same manner that FERC Form 1 is certified. The filing shall also include the charge or credit, if any, resulting from the calculation required by subparagraph (E) of paragraph (2) of this
subsection (d).

   Notwithstanding any other provision of law to the contrary, the intent of the reconciliation is to ultimately reconcile both the revenue requirement reflected in rates for each calendar year, beginning with the calendar year in which the utility files its energy efficiency formula rate tariff pursuant to paragraph (2) of this subsection (d), with what the revenue requirement determined using a year-end rate base for the applicable calendar year would have been had the actual cost information for the applicable calendar year been available at the filing date.

   For purposes of this Section, "FERC Form 1" means the Annual Report of Major Electric Utilities, Licensees and Others that electric utilities are required to file with the Federal Energy Regulatory Commission under the Federal Power Act, Sections 3, 4(a), 304 and 209, modified as necessary to be consistent with 83 Ill. Admin. Code Part 415 as of May 1, 2011. Nothing in this Section is intended to allow costs that are not otherwise recoverable to be recoverable by virtue of inclusion in FERC Form 1.

   (B) The new charges shall take effect beginning on the first billing day of the following January billing period and remain in effect through the last billing day of the next December billing period regardless of
whether the Commission enters upon a hearing pursuant
to this paragraph (3).

(C) The filing shall include relevant and
necessary data and documentation for the applicable
rate year. Normalization adjustments shall not be
required.

Within 45 days after the utility files its annual
update of cost inputs to the energy efficiency formula
rate, the Commission shall have the authority, either upon
complaint or its own initiative, but with reasonable
notice, to enter upon a hearing concerning whether the
projected costs to be incurred by the utility and recovered
during the applicable rate year, and that are reflected in
the inputs to the energy efficiency formula rate, are
consistent with the utility's approved multi-year plan
under subsection (f) or (g) of this Section and whether the
costs incurred by the utility during the prior rate year
were prudent and reasonable. During the course of the
hearing, each objection shall be stated with particularity
and evidence provided in support thereof, after which the
utility shall have the opportunity to rebut the evidence.
Discovery shall be allowed consistent with the
Commission's Rules of Practice, which Rules of Practice
shall be enforced by the Commission or the assigned hearing
examiner. The Commission shall apply the same evidentiary
standards, including, but not limited to, those concerning
the prudence and reasonableness of the costs incurred by
the utility, in the hearing as it would apply in a hearing
to review a filing for a general increase in rates under
Article IX of this Act. The Commission shall not, however,
have the authority in a proceeding under this paragraph (3)
to consider or order any changes to the structure or
protocols of the energy efficiency formula rate approved
pursuant to paragraph (2) of this subsection (d). In a
proceeding under this paragraph (3), the Commission shall
enter its order no later than the earlier of 195 days after
the utility's filing of its annual update of cost inputs to
the energy efficiency formula rate or December 15. The
Commission's determinations of the prudence and
reasonableness of the costs incurred for the applicable
calendar year shall be final upon entry of the Commission's
order and shall not be subject to reopening, reexamination,
or collateral attack in any other Commission proceeding,
case, docket, order, rule, or regulation; however, nothing
in this paragraph (3) shall prohibit a party from
petitioning the Commission to rehear or appeal to the
courts the order pursuant to the provisions of this Act.

In the event the Commission does not, either upon
complaint or its own initiative, enter upon a hearing
within 45 days after the utility files the annual update of
cost inputs to its energy efficiency formula rate, then the
costs incurred for the applicable calendar year shall be
deemed prudent and reasonable and the filed charges shall not be subject to reopening, reexamination, or collateral attack in any other proceeding, case, docket, order, rule, or regulation.

(e) Beginning on the effective date of this amendatory Act of the 99th General Assembly, a utility subject to the requirements of this Section may elect to defer the full amount of its expenses incurred pursuant to this Section for each annual period as a regulatory asset. The total expenses deferred as a regulatory asset in a given year shall be amortized and recovered over a period that is equal to the weighted average of the energy efficiency measure lives implemented for that year that are reflected in the regulatory asset. The unamortized balance shall be recognized as of December 31 for a given year. The utility shall also earn a return on the total of the unamortized balances of all of the energy efficiency regulatory assets, less any deferred taxes related to those unamortized balances, at an annual rate equal to the utility's weighted average cost of capital that includes, based on a year-end capital structure, the utility's actual cost of debt for the applicable calendar year and a cost of equity, which shall be calculated as the sum of the (i) the average for the applicable calendar year of the monthly average yields of 30-year U.S. Treasury bonds published by the Board of Governors of the Federal Reserve System in its weekly H.15 Statistical Release or successor publication; and (ii) 580
basis points, including a revenue conversion factor calculated
to recover or refund all additional income taxes that may be
payable or receivable as a result of that return. Capital
investment costs, including, but not limited to, capital
investment costs associated with voltage optimization measures
that are described in subsection (b) of this Section, shall be
depreciated and recovered over their useful lives consistent
with generally accepted accounting principles. The weighted
average cost of capital shall be applied to the capital
investment cost balance, less any accumulated depreciation and
accumulated deferred income taxes, as of December 31 for a
given year.

When an electric utility creates a regulatory asset
pursuant to the provisions of this Section, the costs are
recovered over a period during which customers also receive a
benefit which is in the public interest. Accordingly, it is the
intent of the General Assembly that an electric utility that
elects to create a regulatory asset pursuant to the provisions
of this Section shall recover all of the associated costs as
set forth in this Section. After the Commission has approved
the prudence and reasonableness of the costs that comprise the
regulatory asset, the electric utility shall be permitted to
recover all such costs, and the value and recoverability
through rates of the associated regulatory asset shall not be
limited, altered, impaired, or reduced.

(f) Beginning in 2017, each electric utility shall file an
energy efficiency plan with the Commission to meet the energy efficiency standards for the next applicable multi-year period beginning January 1 of the year following the filing, according to the following schedule:

(1) No later than 30 days after the effective date of this amendatory Act of the 99th General Assembly or May 1, 2017, whichever is later, each electric utility shall file a 4-year energy efficiency plan commencing on January 1, 2018 that is designed to achieve the cumulative persisting annual savings goals specified in paragraphs (1) through (4) of subsection (b-5) of this Section through implementation of energy efficiency measures; however, the goals shall be reduced if the plan demonstrates that achievement of such goals is not cost effective.

(2) No later than March 1, 2021, each electric utility shall file a 4-year energy efficiency plan commencing on January 1, 2022 that is designed to achieve the cumulative persisting annual savings goals specified in paragraphs (5) through (8) of subsection (b-5) of this Section through implementation of energy efficiency measures; however, the goals shall be reduced if the plan demonstrates that achievement of such goals is not cost effective.

(3) No later than March 1, 2025, each electric utility shall file a 5-year energy efficiency plan commencing on January 1, 2026 that is designed to achieve the cumulative persisting annual savings goals specified in paragraphs...
(9) through (13) of subsection (b-5) of this Section through implementation of energy efficiency measures; however, the goals shall be reduced if the plan demonstrates that achievement of such goals is not cost effective.

If a utility does not file such a plan on or before the applicable filing deadline for the plan, it shall face a penalty of $100,000 per day until the plan is filed.

Each utility's plan shall set forth the utility's proposals to meet the utility's portion of the energy efficiency standards identified in subsection (b), as modified by subsections (d) and (e) of this Section, if applicable, taking into account the unique circumstances of the utility's service territory. For those plans commencing on January 1, 2018, the Commission shall seek public comment on the utility's plan and shall issue an order approving or disapproving each plan no later than August 31, 2017. For those plans commencing after December 31, 2021, the Commission shall seek public comment on the utility's plan and shall issue an order approving or disapproving each plan within 6 months after its submission. If the Commission disapproves a plan, the Commission shall, within 30 days, describe in detail the reasons for the disapproval and describe a path by which the utility may file a revised draft of the plan to address the Commission's concerns satisfactorily. If the utility does not refile with the Commission within 60 days, the utility shall be subject to
penalties at a rate of $100,000 per day until the plan is filed. This process shall continue, and penalties shall accrue, until the utility has successfully filed a portfolio of energy efficiency and demand-response measures. Penalties shall be deposited into the Energy Efficiency Trust Fund.

(g) In submitting proposed plans and funding levels to meet the savings goals adopted by this Act the utility shall:

(1) Demonstrate that its proposed energy efficiency measures and, if applicable, demand-response measures will achieve the requirements that are identified in subsections (b) and (c) of this Section, as modified by subsections (d) and (e), if applicable.

(2) Present specific proposals to implement new building and appliance standards that have been placed into effect.

(3) Demonstrate that its overall portfolio of measures, not including low-income programs described in subsection (c) of this Section, is cost-effective using the total resource cost test and represent a diverse cross-section of opportunities for customers of all rate classes to participate in the programs. Consistent with existing law, individual measures need not be cost effective, and the design of the portfolio, including its individual programs and measures, shall be subject to practical implementation considerations and limitations.

(4) Present a third-party energy efficiency
implementation program subject to the following requirements:

(A) beginning with the year commencing January 1, 2019, the utility shall fund third-party energy efficiency programs in an amount that is no less than $50,000,000 per year;

(B) during 2018, the utility shall conduct a solicitation process for purposes of requesting proposals from third-party vendors for those third-party energy efficiency programs to be offered during one or more of the years commencing January 1, 2019, January 1, 2020, and January 1, 2021; for those multi-year plans commencing on January 1, 2022 and January 1, 2026, the utility shall conduct a solicitation process during 2021 and 2025, respectively, for purposes of requesting proposals from third-party vendors for those third-party energy efficiency programs to be offered during one or more years of the respective multi-year plan period; for each solicitation process, the utility shall identify the sector, technology, or geographical area for which it is seeking requests for proposals;

(C) the utility shall propose the bidder qualifications, performance measurement process, and contract structure, which must include a performance payment mechanism and general terms and conditions;
the proposed qualifications, process, and structure shall be subject to Commission approval;

(D) the utility shall retain an independent third party to score the proposals received through the solicitation process described in this paragraph (4), rank them according to their cost per lifetime kilowatt-hours saved, and assemble the portfolio of third-party programs;

(E) for purposes of determining under paragraph (7) of this subsection (g) the amount of cumulative persisting annual savings achieved by the utility, the programs implemented by third parties pursuant to this paragraph (4) shall be deemed to have achieved 80% of their projected savings regardless of the savings determined by the independent evaluator; if the independent evaluator determines that one or more programs achieved more than 80% of their projected savings, such incremental amount shall be credited to the utility's overall energy savings for the applicable year; and

(F) in the event a third-party vendor fails to achieve 2 consecutive quarterly performance targets, the utility shall have the right to cancel the contract and reallocate the funds to other third-party programs or programs administered by the utility.

The electric utility shall recover all costs
associated with Commission-approved, third-party administered programs regardless of the success of those programs, which is a restatement and clarification of existing law by this amendatory Act of the 99th General Assembly.

(5) Include a proposed or revised cost-recovery tariff mechanism, as provided for under subsection (d) of this Section, to fund the proposed energy efficiency and demand-response measures and to ensure the recovery of the prudently and reasonably incurred costs of Commission-approved programs.

(6) Provide for an annual independent evaluation of the performance of the cost-effectiveness of the utility's portfolio of measures, as well as a full review of the multi-year plan results of the broader net program impacts and, to the extent practical, for adjustment of the measures on a going-forward basis as a result of the evaluations. The resources dedicated to evaluation shall not exceed 3% of portfolio resources in any given year.

(7) Through December 31, 2030, provide for an adjustment to the return on equity component of the utility's weighted average cost of capital calculated pursuant to subsection (d) of this Section:

(A) If the independent evaluator determines that the utility achieved a cumulative persisting annual savings that is less than the applicable annual
incremental goal set forth in subsection (b) of this Section, then the return on equity component shall be reduced by a maximum of 200 basis points in the event that the utility achieved no more than 75% of such goal. If the utility achieved more than 75% of the applicable annual incremental goal but less than 100% of such goal, then the return on equity component shall be reduced by 8 basis points for each percent by which the utility failed to achieve the goal.

(B) If the independent evaluator determines that the utility achieved a cumulative persisting annual savings that is more than the applicable annual incremental goal set forth in subsection (b) of this Section, then the return on equity component shall be increased by a maximum of 200 basis points in the event that the utility achieved at least 125% of such goal. If the utility achieved more than 100% of the applicable annual incremental goal but less than 125% of such goal, then the return on equity component shall be increased by 8 basis points for each percent by which the utility achieved above the goal.

In the event that third-party implementation under paragraph (4) of this subsection (g) or the low-income energy efficiency programs under subsection (c) of this Section fail to perform as anticipated, the utility's annual goal shall be adjusted downward in proportion to the
failure to perform. The utility shall provide a methodology
to adjust the annual goal in the event of such a failure to
perform.

For purposes of this Section, the term "applicable
annual incremental goal" means the difference between the
cumulative persisting annual savings goal for the calendar
year that is the subject of the independent evaluator's
determination and the cumulative persisting annual savings
goal for the immediately preceding calendar year, as such
goals are defined in subsection (b-5) of this Section and
as such goals may have been modified as provided for under
paragraphs (1) through (3) of subsection (f) and to account
for any adjustments resulting from the methodology
approved under this paragraph (7) to address performance
failure related to low-income and third-party administered
energy efficiency programs.

The utility shall submit the energy savings data to the
independent evaluator no later than 30 days after the close
of the plan year. The independent evaluator shall determine
the cumulative persisting annual savings for a given plan
year no later than 120 days after the close of the plan
year. The utility shall submit an informational filing to
the Commission no later than 160 days after the close of
the plan year that attaches the independent evaluator's
final report identifying the cumulative persisting annual
savings for the year and calculates any resulting change to
the utility's return on equity component of the weighted average cost of capital applicable to the next plan year beginning with the January monthly billing period and extending through the December monthly billing period. Following the utility's submittal of its informational filing for a given year, the Commission may, on its own motion or by petition, initiate an investigation of such filing, provided, however, that the utility's proposed return on equity calculation shall be deemed the final, approved calculation on December 15 of the year in which it is filed unless the Commission enters an order on or before December 15, after notice and hearing, that modifies such calculation consistent with this Section.

The adjustments to the return on equity component described in this paragraph (7) shall be applied as described in this paragraph through a separate tariff mechanism, which shall be filed by the utility under subsection (f) or (g) of this Section.

(h) No more than 6% of energy efficiency and demand-response program revenue may be allocated for research, development, or pilot deployment of new equipment or measures.

(i) When practicable, electric utilities shall incorporate advanced metering infrastructure data into the planning, implementation, and evaluation of energy efficiency measures and programs.

(j) Consistent with existing law, the independent
evaluator shall follow the guidelines and use the savings set forth in Commission-approved energy efficiency policy manuals and technical reference manuals, as each may be updated from time to time. Until such time as values for the following measures are incorporated into such Commission-approved manuals, the following measure life values shall apply:

(1) With respect to operational energy efficiency measures:

   (A) a 5-year measure life value shall be used for energy savings resulting from operational energy efficiency measures that are implemented and validated; and

   (B) a 10-year measure life value shall be used for energy savings resulting from operational energy efficiency measures that are implemented, validated, and persisting, as confirmed through a monitoring-based or hardwired feedback mechanism.

   For purposes of this Section, operational energy efficiency measures are those measures that adjust or optimize operational set points and hours of operation of energy using systems.

(2) A 20-year measure life value shall be used for energy savings resulting from light emitting diode streetlights.

(3) A 25-year measure life value shall be used for energy savings resulting from energy efficiency measures
implemented in integrated whole-building new construction.

(k) Notwithstanding any provision of law to the contrary, a
10-year measure life value shall be used for energy savings
resulting from energy efficiency measures implemented for
low-income households under subsection (c) of this Section.

(l) Notwithstanding any provision of law to the contrary,
an electric utility subject to the requirements of this Section
may file a tariff cancelling an automatic adjustment clause
tariff in effect under this Section or Section 8-103, which
shall take effect no later than one business day after the date
such tariff is filed. Thereafter, the utility shall be
authorized to defer and recover its expenses incurred under
this Section through a new tariff authorized under subsection
(d) of this Section or in the utility's next rate case under
Article IX or Section 16-108.5 of this Act, with interest at an
annual rate equal to the utility's weighted average cost of
capital as approved by the Commission in such case. If the
utility elects to file a new tariff under subsection (d) of
this Section, the utility may file the tariff within 10 days
after the effective date of this amendatory Act of the 99th
General Assembly, and the cost inputs to such tariff shall be
based on the projected costs to be incurred by the utility
during the calendar year in which the new tariff is filed and
that were not recovered under the tariff that was cancelled as
provided for in this paragraph. Such costs shall include those
incurred or to be incurred by the utility under its multi-year
plan approved under subsection (f) or (g) of this Section, including, but not limited to, projected capital investment costs and projected regulatory asset balances with correspondingly updated depreciation and amortization reserves and expense. The Commission shall, after notice and hearing, approve, or approve with modification, such tariff and cost inputs no later than 75 days after the utility filed the tariff, provided that such approval, or approval with modification, shall be consistent with the provisions of this Section to the extent they do not conflict with this subsection (l). The tariff approved by the Commission shall take effect no later than 5 days after the Commission enters its order approving the tariff.

No later than 60 days after the effective date of the tariff cancelling the utility's automatic adjustment clause tariff, the utility shall file a reconciliation that reconciles the moneys collected under its automatic adjustment clause tariff with the costs incurred during the period beginning June 1, 2016 and ending on the date that the electric utility's automatic adjustment clause tariff was cancelled. In the event the reconciliation reflects an under-collection, the utility shall recover the costs as specified in this subsection (l). If the reconciliation reflects an over-collection, the utility shall apply the amount of such over-collection as a one-time credit to retail customers' bills.
Sec. 8-104. Natural gas energy efficiency programs.

(a) It is the policy of the State that natural gas utilities and the Department of Commerce and Economic Opportunity are required to use cost-effective energy efficiency to reduce direct and indirect costs to consumers. It serves the public interest to allow natural gas utilities to recover costs for reasonably and prudently incurred expenses for cost-effective energy efficiency measures.

(b) For purposes of this Section, "energy efficiency" means measures that reduce the amount of energy required to achieve a given end use. "Energy efficiency" also includes measures that reduce the total Btus of electricity and natural gas needed to meet the end use or uses. "Cost-effective" means that the measures satisfy the total resource cost test which, for purposes of this Section, means a standard that is met if, for an investment in energy efficiency, the benefit-cost ratio is greater than one. The benefit-cost ratio is the ratio of the net present value of the total benefits of the measures to the net present value of the total costs as calculated over the lifetime of the measures. The total resource cost test compares the sum of avoided natural gas utility costs, representing the benefits that accrue to the system and the participant in the delivery of those efficiency measures, as well as other quantifiable societal benefits, including avoided electric utility costs, to the sum of all incremental costs of end use
measures (including both utility and participant contributions), plus costs to administer, deliver, and evaluate each demand-side measure, to quantify the net savings obtained by substituting demand-side measures for supply resources. In calculating avoided costs, reasonable estimates shall be included for financial costs likely to be imposed by future regulation of emissions of greenhouse gases. The low-income programs described in item (4) of subsection (f) of this Section shall not be required to meet the total resource cost test.

(c) Natural gas utilities shall implement cost-effective energy efficiency measures to meet at least the following natural gas savings requirements, which shall be based upon the total amount of gas delivered to retail customers, other than the customers described in subsection (m) of this Section, during calendar year 2009 multiplied by the applicable percentage. Natural gas utilities may comply with this Section by meeting the annual incremental savings goal in the applicable year or by showing that total cumulative annual savings within a multi-year 3-year planning period associated with measures implemented after May 31, 2011 were equal to the sum of each annual incremental savings requirement from the first day of the multi-year planning period May 31, 2011 through the last day of the multi-year planning period end of the applicable year:

(1) 0.2% by May 31, 2012;
(2) an additional 0.4% by May 31, 2013, increasing total savings to .6%;

(3) an additional 0.6% by May 31, 2014, increasing total savings to 1.2%;

(4) an additional 0.8% by May 31, 2015, increasing total savings to 2.0%;

(5) an additional 1% by May 31, 2016, increasing total savings to 3.0%;

(6) an additional 1.2% by May 31, 2017, increasing total savings to 4.2%;

(7) an additional 1.4% in the year commencing January 1, 2018 by May 31, 2018, increasing total savings to 5.6%;

(8) an additional 1.5% in the year commencing January 1, 2019 by May 31, 2019, increasing total savings to 7.1%;

and

(9) an additional 1.5% in each 12-month period thereafter.

(d) Notwithstanding the requirements of subsection (c) of this Section, a natural gas utility shall limit the amount of energy efficiency implemented in any multi-year reporting period established by subsection (f) of Section 8-104 of this Act, by an amount necessary to limit the estimated average increase in the amounts paid by retail customers in connection with natural gas service to no more than 2% in the applicable multi-year reporting period. The energy savings requirements in subsection (c) of this Section may be
reduced by the Commission for the subject plan, if the utility
demonstrates by substantial evidence that it is highly unlikely
that the requirements could be achieved without exceeding the
applicable spending limits in any multi-year 3-year reporting
period. No later than September 1, 2013, the Commission shall
review the limitation on the amount of energy efficiency
measures implemented pursuant to this Section and report to the
General Assembly, in the report required by subsection (k) of
this Section, its findings as to whether that limitation unduly
constrains the procurement of energy efficiency measures.

(e) The provisions of this subsection (e) apply to those
multi-year plans that commence prior to January 1, 2018. Natural
gas utilities shall be responsible for overseeing the design,
development, and filing of their efficiency plans with the
Commission. The utility shall utilize 75% of the available
funding associated with energy efficiency programs approved by
the Commission, and may outsource various aspects of program
development and implementation. The remaining 25% of available
funding shall be used by the Department of Commerce and
Economic Opportunity to implement energy efficiency measures
that achieve no less than 20% of the requirements of subsection
(c) of this Section. Such measures shall be designed in
conjunction with the utility and approved by the Commission.
The Department may outsource development and implementation of
energy efficiency measures. A minimum of 10% of the entire
portfolio of cost-effective energy efficiency measures shall
be procured from local government, municipal corporations, school districts, and community college districts. Five percent of the entire portfolio of cost-effective energy efficiency measures may be granted to local government and municipal corporations for market transformation initiatives. The Department shall coordinate the implementation of these measures and shall integrate delivery of natural gas efficiency programs with electric efficiency programs delivered pursuant to Section 8-103 of this Act, unless the Department can show that integration is not feasible.

The apportionment of the dollars to cover the costs to implement the Department's share of the portfolio of energy efficiency measures shall be made to the Department once the Department has executed rebate agreements, grants, or contracts for energy efficiency measures and provided supporting documentation for those rebate agreements, grants, and contracts to the utility. The Department is authorized to adopt any rules necessary and prescribe procedures in order to ensure compliance by applicants in carrying out the purposes of rebate agreements for energy efficiency measures implemented by the Department made under this Section.

The details of the measures implemented by the Department shall be submitted by the Department to the Commission in connection with the utility's filing regarding the energy efficiency measures that the utility implements.

The portfolio of measures, administered by both the
utilities and the Department, shall, in combination, be
designed to achieve the annual energy savings requirements set
forth in subsection (c) of this Section, as modified by
subsection (d) of this Section.

The utility and the Department shall agree upon a
reasonable portfolio of measures and determine the measurable
corresponding percentage of the savings goals associated with
measures implemented by the Department.

No utility shall be assessed a penalty under subsection (f)
of this Section for failure to make a timely filing if that
failure is the result of a lack of agreement with the
Department with respect to the allocation of responsibilities
or related costs or target assignments. In that case, the
Department and the utility shall file their respective plans
with the Commission and the Commission shall determine an
appropriate division of measures and programs that meets the
requirements of this Section.

(e-5) The provisions of this subsection (e-5) shall be
applicable to those multi-year plans that commence after
December 31, 2017. Natural gas utilities shall be responsible
for overseeing the design, development, and filing of their
efficiency plans with the Commission and may outsource
development and implementation of energy efficiency measures.
A minimum of 10% of the entire portfolio of cost-effective
energy efficiency measures shall be procured from local
government, municipal corporations, school districts, and
community college districts. Five percent of the entire portfolio of cost-effective energy efficiency measures may be granted to local government and municipal corporations for market transformation initiatives.

The utilities shall also present a portfolio of energy efficiency measures proportionate to the share of total annual utility revenues in Illinois from households at or below 150% of the poverty level. Such programs shall be targeted to households with incomes at or below 80% of area median income.

(e-10) A utility providing approved energy efficiency measures in this State shall be permitted to recover costs of those measures through an automatic adjustment clause tariff filed with and approved by the Commission. The tariff shall be established outside the context of a general rate case and shall be applicable to the utility's customers other than the customers described in subsection (m) of this Section. Each year the Commission shall initiate a review to reconcile any amounts collected with the actual costs and to determine the required adjustment to the annual tariff factor to match annual expenditures.

(e-15) For those multi-year plans that commence prior to January 1, 2018, each utility shall include, in its recovery of costs, the costs estimated for both the utility's and the Department's implementation of energy efficiency measures. Costs collected by the utility for measures implemented by the Department shall be submitted to the
Department pursuant to Section 605-323 of the Civil Administrative Code of Illinois, shall be deposited into the Energy Efficiency Portfolio Standards Fund, and shall be used by the Department solely for the purpose of implementing these measures. A utility shall not be required to advance any moneys to the Department but only to forward such funds as it has collected. The Department shall report to the Commission on an annual basis regarding the costs actually incurred by the Department in the implementation of the measures. Any changes to the costs of energy efficiency measures as a result of plan modifications shall be appropriately reflected in amounts recovered by the utility and turned over to the Department.

The portfolio of measures, administered by both the utilities and the Department, shall, in combination, be designed to achieve the annual energy savings requirements set forth in subsection (e) of this Section, as modified by subsection (d) of this Section.

The utility and the Department shall agree upon a reasonable portfolio of measures and determine the measurable corresponding percentage of the savings goals associated with measures implemented by the Department.

No utility shall be assessed a penalty under subsection (f) of this Section for failure to make a timely filing if that failure is the result of a lack of agreement with the Department with respect to the allocation of responsibilities or related costs or target assignments. In that case, the
Department and the utility shall file their respective plans with the Commission and the Commission shall determine an appropriate division of measures and programs that meets the requirements of this Section.

If the Department is unable to meet performance requirements for the portion of the portfolio implemented by the Department, then the utility and the Department shall jointly submit a modified filing to the Commission explaining the performance shortfall and recommending an appropriate course going forward, including any program modifications that may be appropriate in light of the evaluations conducted under item (8) of subsection (f) of this Section. In this case, the utility obligation to collect the Department's costs and turn over those funds to the Department under this subsection (e) shall continue only if the Commission approves the modifications to the plan proposed by the Department.

(f) No later than October 1, 2010, each gas utility shall file an energy efficiency plan with the Commission to meet the energy efficiency standards through May 31, 2014. No later than October 1, 2013, each gas utility shall file an energy efficiency plan with the Commission to meet the energy efficiency standards through May 31, 2017. Beginning in 2017 and every 3 years thereafter, each utility shall file an energy efficiency plan with the Commission to meet the energy efficiency standards for the next applicable 4-year period beginning January 1 of the year
following the filing. For those multi-year plans commencing on January 1, 2018, each utility shall file its proposed energy efficiency plan no later than 30 days after the effective date of this amendatory Act of the 99th General Assembly or May 1, 2017, whichever is later. Beginning in 2021 and every 4 years thereafter, each utility shall file its energy efficiency plan no later than March 1. If a utility does not file such a plan on or before the applicable filing deadline for the plan by October 1 of the applicable year, then it shall face a penalty of $100,000 per day until the plan is filed.

Each utility's plan shall set forth the utility's proposals to meet the utility's portion of the energy efficiency standards identified in subsection (c) of this Section, as modified by subsection (d) of this Section, taking into account the unique circumstances of the utility's service territory. For those plans commencing after December 31, 2021, the Commission shall seek public comment on the utility's plan and shall issue an order approving or disapproving each plan within 6 months after its submission. For those plans commencing on January 1, 2018, the Commission shall seek public comment on the utility's plan and shall issue an order approving or disapproving each plan no later than August 31, 2017. If the Commission disapproves a plan, the Commission shall, within 30 days, describe in detail the reasons for the disapproval and describe a path by which the utility may file a revised draft of the plan to address the Commission's concerns.
satisfactorily. If the utility does not refile with the Commission within 60 days after the disapproval, the utility shall be subject to penalties at a rate of $100,000 per day until the plan is filed. This process shall continue, and penalties shall accrue, until the utility has successfully filed a portfolio of energy efficiency measures. Penalties shall be deposited into the Energy Efficiency Trust Fund and the cost of any such penalties may not be recovered from ratepayers. In submitting proposed energy efficiency plans and funding levels to meet the savings goals adopted by this Act the utility shall:

(1) Demonstrate that its proposed energy efficiency measures will achieve the requirements that are identified in subsection (c) of this Section, as modified by subsection (d) of this Section.

(2) Present specific proposals to implement new building and appliance standards that have been placed into effect.

(3) Present estimates of the total amount paid for gas service expressed on a per therm basis associated with the proposed portfolio of measures designed to meet the requirements that are identified in subsection (c) of this Section, as modified by subsection (d) of this Section.

(4) For those multi-year plans that commence prior to January 1, 2018, coordinate with the Department to present a portfolio of energy efficiency measures
proportionate to the share of total annual utility revenues in Illinois from households at or below 150% of the poverty level. Such programs shall be targeted to households with incomes at or below 80% of area median income.

(5) Demonstrate that its overall portfolio of energy efficiency measures, not including low-income programs described in covered by item (4) of this subsection (f) and subsection (e-5) of this Section, are cost-effective using the total resource cost test and represent a diverse cross section of opportunities for customers of all rate classes to participate in the programs.

(6) Demonstrate that a gas utility affiliated with an electric utility that is required to comply with Section 8-103 or 8-103B of this Act has integrated gas and electric efficiency measures into a single program that reduces program or participant costs and appropriately allocates costs to gas and electric ratepayers. For those multi-year plans that commence prior to January 1, 2018, the Department shall integrate all gas and electric programs it delivers in any such utilities' service territories, unless the Department can show that integration is not feasible or appropriate.

(7) Include a proposed cost recovery tariff mechanism to fund the proposed energy efficiency measures and to ensure the recovery of the prudently and reasonably incurred costs of Commission-approved programs.
(8) Provide for quarterly status reports tracking implementation of and expenditures for the utility's portfolio of measures and, if applicable, the Department's portfolio of measures, an annual independent review, and a full independent evaluation of the multi-year 3-year results of the performance and the cost-effectiveness of the utility's and, if applicable, Department's portfolios of measures and broader net program impacts and, to the extent practical, for adjustment of the measures on a going forward basis as a result of the evaluations. The resources dedicated to evaluation shall not exceed 3% of portfolio resources in any given multi-year 3-year period.

(g) No more than 3% of expenditures on energy efficiency measures may be allocated for demonstration of breakthrough equipment and devices.

(h) Illinois natural gas utilities that are affiliated by virtue of a common parent company may, at the utilities' request, be considered a single natural gas utility for purposes of complying with this Section.

(i) If, after 3 years, a gas utility fails to meet the efficiency standard specified in subsection (c) of this Section as modified by subsection (d), then it shall make a contribution to the Low-Income Home Energy Assistance Program. The total liability for failure to meet the goal shall be assessed as follows:

(1) a large gas utility shall pay $600,000;
(2) a medium gas utility shall pay $400,000; and

(3) a small gas utility shall pay $200,000.

For purposes of this Section, (i) a "large gas utility" is a gas utility that on December 31, 2008, served more than 1,500,000 gas customers in Illinois; (ii) a "medium gas utility" is a gas utility that on December 31, 2008, served fewer than 1,500,000, but more than 500,000 gas customers in Illinois; and (iii) a "small gas utility" is a gas utility that on December 31, 2008, served fewer than 500,000 and more than 100,000 gas customers in Illinois. The costs of this contribution may not be recovered from ratepayers.

If a gas utility fails to meet the efficiency standard specified in subsection (c) of this Section, as modified by subsection (d) of this Section, in any 2 consecutive multi-year 3-year planning periods, then the responsibility for implementing the utility's energy efficiency measures shall be transferred to an independent program administrator selected by the Commission. Reasonable and prudent costs incurred by the independent program administrator to meet the efficiency standard specified in subsection (c) of this Section, as modified by subsection (d) of this Section, may be recovered from the customers of the affected gas utilities, other than customers described in subsection (m) of this Section. The utility shall provide the independent program administrator with all information and assistance necessary to perform the program administrator's duties including but not limited to
customer, account, and energy usage data, and shall allow the program administrator to include inserts in customer bills. The utility may recover reasonable costs associated with any such assistance.

(j) No utility shall be deemed to have failed to meet the energy efficiency standards to the extent any such failure is due to a failure of the Department.

(k) Not later than January 1, 2012, the Commission shall develop and solicit public comment on a plan to foster statewide coordination and consistency between statutorily mandated natural gas and electric energy efficiency programs to reduce program or participant costs or to improve program performance. Not later than September 1, 2013, the Commission shall issue a report to the General Assembly containing its findings and recommendations.

(l) This Section does not apply to a gas utility that on January 1, 2009, provided gas service to fewer than 100,000 customers in Illinois.

(m) Subsections (a) through (k) of this Section do not apply to customers of a natural gas utility that have a North American Industry Classification System code number that is 22111 or any such code number beginning with the digits 31, 32, or 33 and (i) annual usage in the aggregate of 4 million therms or more within the service territory of the affected gas utility or with aggregate usage of 8 million therms or more in this State and complying with the provisions of item (l) of
this subsection (m); or (ii) using natural gas as feedstock and
meeting the usage requirements described in item (i) of this
subsection (m), to the extent such annual feedstock usage is
greater than 60% of the customer's total annual usage of
natural gas.

(1) Customers described in this subsection (m) of this
Section shall apply, on a form approved on or before
October 1, 2009 by the Department, to the Department to be
designated as a self-directing customer ("SDC") or as an
exempt customer using natural gas as a feedstock from which
other products are made, including, but not limited to,
feedstock for a hydrogen plant, on or before the 1st day of
February, 2010. Thereafter, application may be made not
less than 6 months before the filing date of the gas
utility energy efficiency plan described in subsection (f)
of this Section; however, a new customer that commences
taking service from a natural gas utility after February 1,
2010 may apply to become a SDC or exempt customer up to 30
days after beginning service. Customers described in this
subsection (m) that have not already been approved by the
Department may apply to be designated a self-directing
customer or exempt customer, on a form approved by the
Department, between September 1, 2013 and September 30,
2013. Customer applications that are approved by the
Department under this amendatory Act of the 98th General
Assembly shall be considered to be a self-directing
customer or exempt customer, as applicable, for the current 3-year planning period effective December 1, 2013. Such application shall contain the following:

(A) the customer's certification that, at the time of its application, it qualifies to be a SDC or exempt customer described in this subsection (m) of this Section;

(B) in the case of a SDC, the customer's certification that it has established or will establish by the beginning of the utility's multi-year 3-year planning period commencing subsequent to the application, and will maintain for accounting purposes, an energy efficiency reserve account and that the customer will accrue funds in said account to be held for the purpose of funding, in whole or in part, energy efficiency measures of the customer's choosing, which may include, but are not limited to, projects involving combined heat and power systems that use the same energy source both for the generation of electrical or mechanical power and the production of steam or another form of useful thermal energy or the use of combustible gas produced from biomass, or both;

(C) in the case of a SDC, the customer's certification that annual funding levels for the energy efficiency reserve account will be equal to 2% of the customer's cost of natural gas, composed of the
customer's commodity cost and the delivery service charges paid to the gas utility, or $150,000, whichever is less;

(D) in the case of a SDC, the customer's certification that the required reserve account balance will be capped at 3 years' worth of accruals and that the customer may, at its option, make further deposits to the account to the extent such deposit would increase the reserve account balance above the designated cap level;

(E) in the case of a SDC, the customer's certification that by October 1 of each year, beginning no sooner than October 1, 2012, the customer will report to the Department information, for the 12-month period ending May 31 of the same year, on all deposits and reductions, if any, to the reserve account during the reporting year, and to the extent deposits to the reserve account in any year are in an amount less than $150,000, the basis for such reduced deposits; reserve account balances by month; a description of energy efficiency measures undertaken by the customer and paid for in whole or in part with funds from the reserve account; an estimate of the energy saved, or to be saved, by the measure; and that the report shall include a verification by an officer or plant manager of the customer or by a registered professional
engineer or certified energy efficiency trade professional that the funds withdrawn from the reserve account were used for the energy efficiency measures;

(F) in the case of an exempt customer, the customer's certification of the level of gas usage as feedstock in the customer's operation in a typical year and that it will provide information establishing this level, upon request of the Department;

(G) in the case of either an exempt customer or a SDC, the customer's certification that it has provided the gas utility or utilities serving the customer with a copy of the application as filed with the Department;

(H) in the case of either an exempt customer or a SDC, certification of the natural gas utility or utilities serving the customer in Illinois including the natural gas utility accounts that are the subject of the application; and

(I) in the case of either an exempt customer or a SDC, a verification signed by a plant manager or an authorized corporate officer attesting to the truthfulness and accuracy of the information contained in the application.

(2) The Department shall review the application to determine that it contains the information described in provisions (A) through (I) of item (1) of this subsection (m), as applicable. The review shall be completed within 30
days after the date the application is filed with the Department. Absent a determination by the Department within the 30-day period, the applicant shall be considered to be a SDC or exempt customer, as applicable, for all subsequent multi-year 3-year planning periods, as of the date of filing the application described in this subsection (m). If the Department determines that the application does not contain the applicable information described in provisions (A) through (I) of item (1) of this subsection (m), it shall notify the customer, in writing, of its determination that the application does not contain the required information and identify the information that is missing, and the customer shall provide the missing information within 15 working days after the date of receipt of the Department's notification.

(3) The Department shall have the right to audit the information provided in the customer's application and annual reports to ensure continued compliance with the requirements of this subsection. Based on the audit, if the Department determines the customer is no longer in compliance with the requirements of items (A) through (I) of item (1) of this subsection (m), as applicable, the Department shall notify the customer in writing of the noncompliance. The customer shall have 30 days to establish its compliance, and failing to do so, may have its status as a SDC or exempt customer revoked by the Department. The
Department shall treat all information provided by any customer seeking SDC status or exemption from the provisions of this Section as strictly confidential.

(4) Upon request, or on its own motion, the Commission may open an investigation, no more than once every 3 years and not before October 1, 2014, to evaluate the effectiveness of the self-directing program described in this subsection (m).

Customers described in this subsection (m) that applied to the Department on January 3, 2013, were approved by the Department on February 13, 2013 to be a self-directing customer or exempt customer, and receive natural gas from a utility that provides gas service to at least 500,000 retail customers in Illinois and electric service to at least 1,000,000 retail customers in Illinois shall be considered to be a self-directing customer or exempt customer, as applicable, for the current 3-year planning period effective December 1, 2013.

(n) The applicability of this Section to customers described in subsection (m) of this Section is conditioned on the existence of the SDC program. In no event will any provision of this Section apply to such customers after January 1, 2020.

(o) Utilities' 3-year energy efficiency plans approved by the Commission on or before the effective date of this amendatory Act of the 99th General Assembly for the period June 1, 2014 through May 31, 2017 shall continue to be in force and
effect through December 31, 2017 so that the energy efficiency
programs set forth in those plans continue to be offered during
the period June 1, 2017 through December 31, 2017. Each utility
is authorized to increase, on a pro rata basis, the energy
savings goals and budgets approved in its plan to reflect the
additional 7 months of the plan's operation.

Sec. 9-105. Demand-based delivery services charge.

(a) Beginning with the January 2019 monthly billing period
for an electric utility that serves more than 3,000,000 retail
customers in the State and beginning with the January 2021
monthly billing period for an electric utility that serves
3,000,000 or less retail customers but more than 500,000 retail
customers in the State, such utility may recover its costs of
providing delivery services to retail customers through a
charge based on kilowatts of demand. A utility that elects to
recover its costs as provided in this Section shall file its
tariffs pursuant to Section 9-201 of this Act, provided that a
participating utility as defined in Section 16-108.5 of this
Act shall file such tariffs pursuant to subsection (e) of
Section 16-108.5.

(b) Tariffs filed by a utility under subsection (a) of this
Section shall be subject to the following provisions:

(1) The categories of costs being recovered through a fixed charge on the effective date of this amendatory Act of the 99th General Assembly shall continue to be recovered through a fixed charge; however, this paragraph (1) shall not limit the consideration and inclusion of additional cost components to be recovered through a fixed charge.

(2) The categories of costs being recovered through riders or automatic adjustment clause tariffs on the effective date of this amendatory Act of the 99th General Assembly and add-on taxes and other separately-stated charges or adjustments may, at the utility's election, continue to be recovered in the manner they are being collected, provided that nothing in this paragraph (2) shall prohibit addition or elimination of a rider or an automatic adjustment clause tariff or preclude the utility from revising those riders or automatic adjustment clause tariffs, pursuant to this Article IX or any applicable provisions of this Act, regardless of whether such riders or automatic adjustment clause tariffs assess charges on a kilowatt-hour or kilowatt basis.

(3) Taxes assessed on a kilowatt-hour basis shall continue to be recovered on a kilowatt-hour basis.

(4) The costs of providing delivery services to those retail customers subject to the tariff that are not recovered under paragraphs (1) through (3) of this
subsection (b) shall be recovered through a charge based on
kilowatts of demand, and the tariffs shall be designed to
allocate costs to the cost causer generally based on the
demands that customers place on the utility's systems.

(5) For purposes of this Section, the kilowatts of
demand for each residential customer of an electric utility
that serves more than 3,000,000 retail customers in the
State shall be calculated based on the maximum kilowatts
delivered to the customer during a 30-minute interval over
a 16-hour period beginning at 6 a.m. and ending at 10 p.m.
Central Prevailing Time on a non-holiday weekday during the
monthly billing period or periods for which the bill is
rendered; the kilowatts of demand for each residential
customer of an electric utility that serves 3,000,000 or
less retail customers but more than 500,000 retail
customers in the State shall be calculated based on the
maximum kilowatts delivered to the customer during a
60-minute interval over a 16-hour period beginning at 6
a.m. and ending at 10 p.m. Central Prevailing Time on a
non-holiday weekday during the monthly billing period or
periods for which the bill is rendered. For purposes of
this Section, 30-minute intervals shall begin on the hour
and 30 minutes past the hour and 60-minute intervals shall
begin on the hour. An electric utility may elect to
estimate retail customers' kilowatt demands if the
interval data necessary to determine such customers'
kilowatt demands is not available.

(c) An electric utility that elects to recover its costs of providing delivery services to retail customers pursuant to subsection (a) of this Section shall notify the Commission of its election to do so no later than 20 months before the tariff to recover such costs would take effect under this Section. An electric utility that makes such election shall also be subject to the following provisions, as applicable:

(1) If the utility elects to recover, pursuant to this Section, its costs of providing delivery services to residential retail customers, then the utility shall also file a tariff that limits the amount of the delivery services revenue requirement that is allocated to be recovered from such customers through the customer charge to no more than 14% on average among residential retail customers. The tariff shall take effect at the same time the utility's tariff authorized by subsection (a) of this Section takes effect.

(2) If the utility elects to recover, pursuant to this Section, its costs of providing delivery services to eligible retail customers, as defined by Section 16-111.5 of this Act, then the utility shall also offer a market-based, time-of-use rate for eligible retail customers that choose to take power and energy supply service from the utility. The utility shall file its time-of-use rate tariff no later than 120 days after its
demand-based rates applicable to such customers take
effect pursuant to subsection (a) of this Section.

(3) Beginning with the year in which a utility elects
to recover, pursuant to this Section, its costs of
providing delivery services to such eligible retail
customers, the utility shall spend $15,000,000 over 3 years
in customer education and outreach efforts designed to
inform eligible retail customers about the rate design
changes to be implemented pursuant to this Section and to
empower such customers regarding how to respond to the new
rate design. The investment shall be a recoverable expense.

(4) If the electric utility also has a
performance-based formula rate in effect pursuant to
Section 16-108.5 of this Act, then the utility shall be
permitted to revise the formula rate and schedules to
reduce the 50 basis point values to zero that would
otherwise apply under paragraph (5) of subsection (c) of
Section 16-108.5 of this Act. If the utility no longer has
a performance-based formula rate in effect pursuant to
Section 16-108.5 of this Act, then the utility shall be
permitted to implement the revenue balancing adjustment
tariff described in Section 9-107 of this Act.

(220 ILCS 5/9-107 new)
Sec. 9-107. Revenue balancing adjustment tariff.

(a) In this Section:
"Reconciliation period" means a period beginning with the January monthly billing period and extending through the December monthly billing period.

"Rate case reconciliation revenue requirement" means the final distribution revenue requirement or requirements approved by the Commission in the utility's rate case or formula rate proceeding to set the rates initially applicable in the relevant reconciliation period after the conclusion of the period. In the event the Commission has approved more than one revenue requirement for the reconciliation period, the amount of rate case revenue under each approved revenue requirement shall be prorated based upon the number of days under which each revenue requirement was in effect.

(b) An electric utility that is authorized under paragraph (4) of subsection (c) of Section 9-105 of this Act to implement a revenue balancing adjustment tariff under this Section because the utility no longer has a performance-based formula rate in effect pursuant to Section 16-108.5 of this Act, may file the tariff for the purpose of preventing undercollections or overcollections of distribution revenues as compared to the revenue requirement or requirements approved by the Commission on which the rates giving rise to those revenues were based. The tariff shall calculate an annual adjustment that reflects any difference between the actual delivery service revenue collected for services provided during the relevant reconciliation period and the rate case reconciliation revenue
requirement for the relevant reconciliation period and shall set forth the reconciliation categories or classes, or a combination of both, in a manner determined at the utility's discretion.

(c) A utility that elects to file the tariff authorized by this Section shall file the tariff outside the context of a general rate case or formula rate proceeding, and the Commission shall, after notice and hearing, approve the tariff or approve with modification no later than 120 days after the utility files the tariff, and the tariff shall remain in effect at the discretion of the utility. The tariff shall also require that the electric utility submit an annual revenue balancing reconciliation report to the Commission reflecting the difference between the actual delivery service revenue and rate case revenue for the applicable reconciliation and identifying the charges or credits to be applied thereafter. The annual revenue balancing reconciliation report shall be filed with the Commission no later than March 20 of the year following a reconciliation period. The Commission may initiate a review of the revenue balancing reconciliation report each year to determine if any subsequent adjustment is necessary to align actual delivery service revenue and rate case revenue. In the event the Commission elects to initiate such review, the Commission shall, after notice and hearing, enter an order approving, or approving as modified, such revenue balancing reconciliation report no later than 120 days after the utility
files its report with the Commission. If the Commission does not initiate such review, the revenue balancing reconciliation report and the identified charges or credits shall be deemed accepted and approved 120 days after the utility files the report and shall not be subject to review in any other proceeding.

(220 ILCS 5/16-103.3 new)

Sec. 16-103.3. Unbundling of charges related to electricity supply and regional transmission organization services. Beginning with the January 2019 monthly billing period, an electric utility that provides electric service to more than 3,000,000 retail customers in the State shall restructure its retail electricity supply charges applicable to eligible retail customers, as defined by Section 16-111.5 of this Act, for whom the electric utility procures electric power and energy pursuant to Section 1-75 of the Illinois Power Agency Act and Section 16-111.5 of this Act. The restructuring shall allocate to these customers, and separately state, the following: the costs of electric capacity, costs of transmission services, and charges for network integration transmission service, transmission enhancement, and locational reliability, as these terms are defined in the PJM Interconnection Open Access Transmission Tariff on March 1, 2016. In the event the Open Access Transmission Tariff subsequently renames those terms, the services reflected under...
those terms shall continue to be subject to the restructuring described in this Section. It is the intent of this Section that eligible retail customers taking electricity supply service from an electric utility that provides electric service to more than 3,000,000 retail customers in the State pay charges for the electricity supply and regional transmission organization-related services costs that generally reflect the manner in which the associated costs are incurred.

(220 ILCS 5/16-107)
Sec. 16-107. Real-time pricing.

(a) Each electric utility shall file, on or before May 1, 1998, a tariff or tariffs which allow nonresidential retail customers in the electric utility's service area to elect real-time pricing beginning October 1, 1998.

(b) Each electric utility shall file, on or before May 1, 2000, a tariff or tariffs which allow residential retail customers in the electric utility's service area to elect real-time pricing beginning October 1, 2000.

(b-5) Each electric utility shall file a tariff or tariffs allowing residential retail customers in the electric utility's service area to elect real-time pricing beginning January 2, 2007. The Commission may, after notice and hearing, approve the tariff or tariffs. A customer who elects real-time pricing shall remain on such rate for a minimum of 12 months.
The Commission may, after notice and hearing, approve the tariff or tariffs, provided that the Commission finds that the potential for demand reductions will result in net economic benefits to all residential customers of the electric utility. In examining economic benefits from demand reductions, the Commission shall, at a minimum, consider the following: improvements to system reliability and power quality, reduction in wholesale market prices and price volatility, electric utility cost avoidance and reductions, market power mitigation, and other benefits of demand reductions, but only to the extent that the effects of reduced demand can be demonstrated to lower the cost of electricity delivered to residential customers. A tariff or tariffs approved pursuant to this subsection (b-5) shall, at a minimum, describe (i) the methodology for determining the market price of energy to be reflected in the real-time rate and (ii) the manner in which customers who elect real-time pricing will be provided with ready access to hourly market prices, including, but not limited to, day-ahead hourly energy prices. A customer who elects real-time pricing pursuant to a tariff approved under this subsection (b-5) and thereafter terminates the election shall not return to taking service under the tariff for a period of 12 months following the date on which the customer terminated real-time pricing. However, this limitation shall cease to apply on such date that the provision of electric power and energy is declared competitive under Section 16-113.
of this Act for the customer group or groups to which this
subsection (b-5) applies.

A proceeding under this subsection (b-5) may not exceed 120
days in length.

(b-10) Each electric utility providing real-time pricing
pursuant to subsection (b-5) shall install a meter capable of
recording hourly interval energy use at the service location of
each customer that elects real-time pricing pursuant to this
subsection.

(b-15) If the Commission issues an order pursuant to
subsection (b-5), the affected electric utility shall contract
with an entity not affiliated with the electric utility to
serve as a program administrator to develop and implement a
program to provide consumer outreach, enrollment, and
education concerning real-time pricing and to establish and
administer an information system and technical and other
customer assistance that is necessary to enable customers to
manage electricity use. The program administrator: (i) shall be
selected and compensated by the electric utility, subject to
Commission approval; (ii) shall have demonstrated technical
and managerial competence in the development and
administration of demand management programs; and (iii) may
develop and implement risk management, energy efficiency, and
other services related to energy use management for which the
program administrator shall be compensated by participants in
the program receiving such services. The electric utility shall
provide the program administrator with all information and assistance necessary to perform the program administrator's duties, including, but not limited to, customer, account, and energy use data. The electric utility shall permit the program administrator to include inserts in residential customer bills 2 times per year to assist with customer outreach and enrollment.

The program administrator shall submit an annual report to the electric utility no later than April 1 of each year describing the operation and results of the program, including information concerning the number and types of customers using real-time pricing, changes in customers' energy use patterns, an assessment of the value of the program to both participants and non-participants, and recommendations concerning modification of the program and the tariff or tariffs filed under subsection (b-5). This report shall be filed by the electric utility with the Commission within 30 days of receipt and shall be available to the public on the Commission's web site.

(b-20) The Commission shall monitor the performance of programs established pursuant to subsection (b-15) and shall order the termination or modification of a program if it determines that the program is not, after a reasonable period of time for development not to exceed 4 years, resulting in net benefits to the residential customers of the electric utility.

(b-25) An electric utility shall be entitled to recover
reasonable costs incurred in complying with this Section, provided that recovery of the costs is fairly apportioned among its residential customers as provided in this subsection (b-25). The electric utility may apportion greater costs on the residential customers who elect real-time pricing, but may also impose some of the costs of real-time pricing on customers who do not elect real-time pricing, provided that the Commission determines that the cost savings resulting from real-time pricing will exceed the costs imposed on customers for maintaining the program.

(c) The electric utility's tariff or tariffs filed pursuant to this Section shall be subject to Article IX.

(d) This Section does not apply to any electric utility providing service to 100,000 or fewer customers.

(Source: P.A. 94-977, eff. 6-30-06.)

(220 ILCS 5/16-107.5)

Sec. 16-107.5. Net electricity metering.

(a) The Legislature finds and declares that a program to provide net electricity metering, as defined in this Section, for eligible customers can encourage private investment in renewable energy resources, stimulate economic growth, enhance the continued diversification of Illinois' energy resource mix, and protect the Illinois environment.

(b) As used in this Section, (i) "eligible customer" means a retail customer that owns or operates a solar, wind, or other
eligible renewable electrical generating facility with a rated capacity of not more than 2,000 kilowatts that is located on the customer's premises and is intended primarily to offset the customer's own electrical requirements; (ii) "electricity provider" means an electric utility or alternative retail electric supplier; (iii) "eligible renewable electrical generating facility" means a generator powered by solar electric energy, wind, dedicated crops grown for electricity generation, agricultural residues, untreated and unadulterated wood waste, landscape trimmings, livestock manure, anaerobic digestion of livestock or food processing waste, fuel cells or microturbines powered by renewable fuels, or hydroelectric energy; and (iv) "net electricity metering" (or "net metering") means the measurement, during the billing period applicable to an eligible customer, of the net amount of electricity supplied by an electricity provider to the customer's premises or provided to the electricity provider by the customer.

(c) A net metering facility shall be equipped with metering equipment that can measure the flow of electricity in both directions at the same rate.

(1) For eligible customers whose electric service has not been declared competitive pursuant to Section 16-113 of this Act as of July 1, 2011 and whose electric delivery service is provided and measured on a kilowatt-hour basis and electric supply service is not provided based on hourly pricing, this shall typically be accomplished through use
of a single, bi-directional meter. If the eligible
customer's existing electric revenue meter does not meet
this requirement, the electricity provider shall arrange
for the local electric utility or a meter service provider
to install and maintain a new revenue meter at the
electricity provider's expense.

(2) For eligible customers whose electric service has
not been declared competitive pursuant to Section 16-113 of
this Act as of July 1, 2011 and whose electric delivery
service is provided and measured on a kilowatt demand basis
and electric supply service is not provided based on hourly
pricing, this shall typically be accomplished through use
of a dual channel meter capable of measuring the flow of
electricity both into and out of the customer's facility at
the same rate and ratio. If such customer's existing
electric revenue meter does not meet this requirement, then
the electricity provider shall arrange for the local
electric utility or a meter service provider to install and
maintain a new revenue meter at the electricity provider's
expense.

(3) For all other eligible customers, until such time
as the local electric utility installs a smart meter, as
described by subsection (b) of Section 16-108.5 of this
Act, the electricity provider may arrange for the local
electric utility or a meter service provider to install and
maintain metering equipment capable of measuring the flow
of electricity both into and out of the customer's facility at the same rate and ratio, typically through the use of a dual channel meter. If the eligible customer's existing electric revenue meter does not meet this requirement, then the costs of installing such equipment shall be paid for by the customer.

(d) An electricity provider shall measure and charge or credit for the net electricity supplied to eligible customers or provided by eligible customers whose electric service has not been declared competitive pursuant to Section 16-113 of this Act as of July 1, 2011 and whose electric delivery service is provided and measured on a kilowatt-hour basis and electric supply service is not provided based on hourly pricing in the following manner:

(1) If the amount of electricity used by the customer during the billing period exceeds the amount of electricity produced by the customer, the electricity provider shall charge the customer for the net electricity supplied to and used by the customer as provided in subsection (e-5) of this Section.

(2) If the amount of electricity produced by a customer during the billing period exceeds the amount of electricity used by the customer during that billing period, the electricity provider supplying that customer shall apply a 1:1 kilowatt-hour credit to a subsequent bill for service to the customer for the net electricity supplied to the
electricity provider. The electricity provider shall continue to carry over any excess kilowatt-hour credits earned and apply those credits to subsequent billing periods to offset any customer-generator consumption in those billing periods until all credits are used or until the end of the annualized period.

(3) At the end of the year or annualized over the period that service is supplied by means of net metering, or in the event that the retail customer terminates service with the electricity provider prior to the end of the year or the annualized period, any remaining credits in the customer's account shall expire.

(d-5) An electricity provider shall measure and charge or credit for the net electricity supplied to eligible customers or provided by eligible customers whose electric service has not been declared competitive pursuant to Section 16-113 of this Act as of July 1, 2011 and whose electric delivery service is provided and measured on a kilowatt-hour basis and electric supply service is provided based on hourly pricing in the following manner:

(1) If the amount of electricity used by the customer during any hourly period exceeds the amount of electricity produced by the customer, the electricity provider shall charge the customer for the net electricity supplied to and used by the customer according to the terms of the contract or tariff to which the same customer would be assigned to
or be eligible for if the customer was not a net metering customer.

(2) If the amount of electricity produced by a customer during any hourly period exceeds the amount of electricity used by the customer during that hourly period, the energy provider shall apply a credit for the net kilowatt-hours produced in such period. The credit shall consist of an energy credit and a delivery service credit. The energy credit shall be valued at the same price per kilowatt-hour as the electric service provider would charge for kilowatt-hour energy sales during that same hourly period. The delivery credit shall be equal to the net kilowatt-hours produced in such hourly period times a credit that reflects all kilowatt-hour based charges in the customer's electric service rate, excluding energy charges.

(e) An electricity provider shall measure and charge or credit for the net electricity supplied to eligible customers whose electric service has not been declared competitive pursuant to Section 16-113 of this Act as of July 1, 2011 and whose electric delivery service is provided and measured on a kilowatt demand basis and electric supply service is not provided based on hourly pricing in the following manner:

(1) If the amount of electricity used by the customer during the billing period exceeds the amount of electricity produced by the customer, then the electricity provider
shall charge the customer for the net electricity supplied to and used by the customer as provided in subsection (e-5) of this Section. The customer shall remain responsible for all taxes, fees, and utility delivery charges that would otherwise be applicable to the net amount of electricity used by the customer.

(2) If the amount of electricity produced by a customer during the billing period exceeds the amount of electricity used by the customer during that billing period, then the electricity provider supplying that customer shall apply a 1:1 kilowatt-hour credit that reflects the kilowatt-hour based charges in the customer's electric service rate to a subsequent bill for service to the customer for the net electricity supplied to the electricity provider. The electricity provider shall continue to carry over any excess kilowatt-hour credits earned and apply those credits to subsequent billing periods to offset any customer-generator consumption in those billing periods until all credits are used or until the end of the annualized period.

(3) At the end of the year or annualized over the period that service is supplied by means of net metering, or in the event that the retail customer terminates service with the electricity provider prior to the end of the year or the annualized period, any remaining credits in the customer's account shall expire.
(e-5) An electricity provider shall provide electric service to eligible customers who utilize net metering at non-discriminatory rates that are identical, with respect to rate structure, retail rate components, and any monthly charges, to the rates that the customer would be charged if not a net metering customer. An electricity provider shall not charge net metering customers any fee or charge or require additional equipment, insurance, or any other requirements not specifically authorized by interconnection standards authorized by the Commission, unless the fee, charge, or other requirement would apply to other similarly situated customers who are not net metering customers. The customer will remain responsible for all taxes, fees, and utility delivery charges that would otherwise be applicable to the net amount of electricity used by the customer. Subsections (c) through (e) of this Section shall not be construed to prevent an arms-length agreement between an electricity provider and an eligible customer that sets forth different prices, terms, and conditions for the provision of net metering service, including, but not limited to, the provision of the appropriate metering equipment for non-residential customers.

(f) Notwithstanding the requirements of subsections (c) through (e-5) of this Section, an electricity provider must require dual-channel metering for customers operating eligible renewable electrical generating facilities with a nameplate rating up to 2,000 kilowatts and to whom the provisions of
neither subsection (d), (d-5), nor (e) of this Section apply. In such cases, electricity charges and credits shall be determined as follows:

(1) The electricity provider shall assess and the customer remains responsible for all taxes, fees, and utility delivery charges that would otherwise be applicable to the gross amount of kilowatt-hours supplied to the eligible customer by the electricity provider.

(2) Each month that service is supplied by means of dual-channel metering, the electricity provider shall compensate the eligible customer for any excess kilowatt-hour credits at the electricity provider's avoided cost of electricity supply over the monthly period or as otherwise specified by the terms of a power-purchase agreement negotiated between the customer and electricity provider.

(3) For all eligible net metering customers taking service from an electricity provider under contracts or tariffs employing time of use rates, any monthly consumption of electricity shall be calculated according to the terms of the contract or tariff to which the same customer would be assigned to or be eligible for if the customer was not a net metering customer. When those same customer-generators are net generators during any discrete time of use period, the net kilowatt-hours produced shall be valued at the same price per kilowatt-hour as the
electric service provider would charge for retail kilowatt-hour sales during that same time of use period.

(g) For purposes of federal and State laws providing renewable energy credits or greenhouse gas credits, the eligible customer shall be treated as owning and having title to the renewable energy attributes, renewable energy credits, and greenhouse gas emission credits related to any electricity produced by the qualified generating unit. The electricity provider may not condition participation in a net metering program on the signing over of a customer's renewable energy credits; provided, however, this subsection (g) shall not be construed to prevent an arms-length agreement between an electricity provider and an eligible customer that sets forth the ownership or title of the credits.

(h) Within 120 days after the effective date of this amendatory Act of the 95th General Assembly, the Commission shall establish standards for net metering and, if the Commission has not already acted on its own initiative, standards for the interconnection of eligible renewable generating equipment to the utility system. The interconnection standards shall address any procedural barriers, delays, and administrative costs associated with the interconnection of customer-generation while ensuring the safety and reliability of the units and the electric utility system. The Commission shall consider the Institute of Electrical and Electronics Engineers (IEEE) Standard 1547 and
the issues of (i) reasonable and fair fees and costs, (ii) clear timelines for major milestones in the interconnection process, (iii) nondiscriminatory terms of agreement, and (iv) any best practices for interconnection of distributed generation.

(i) All electricity providers shall begin to offer net metering no later than April 1, 2008. However, this Section shall not apply to an electric utility, or the customers to which such utility provides delivery services, beginning on the date that the utility's tariff to recover its delivery services costs pursuant to subsection (a) of Section 9-105 of this Act takes effect, if any. Retail customers that are receiving net metering service pursuant to this Section at such time as this Section ceases to apply to the electric utility shall be entitled to continue the service pursuant to subsections (c) and (e) of Section 16-107.7 of this Act.

(j) An electricity provider shall provide net metering to eligible customers until the load of its net metering customers equals 5% of the total peak demand supplied by that electricity provider during the previous year. Electricity providers are authorized to offer net metering beyond the 5% level if they so choose.

(k) Each electricity provider shall maintain records and report annually to the Commission the total number of net metering customers served by the provider, as well as the type, capacity, and energy sources of the generating systems used by
the net metering customers. Nothing in this Section shall limit
the ability of an electricity provider to request the redaction
of information deemed by the Commission to be confidential
business information. Each electricity provider shall notify
the Commission when the total generating capacity of its net
metering customers is equal to or in excess of the 5% cap
specified in subsection (j) of this Section.

(l) Notwithstanding the definition of "eligible customer"
in item (i) of subsection (b) of this Section, each electricity
provider shall consider whether to allow meter aggregation for
the purposes of net metering on:

(1) properties owned or leased by multiple customers
that contribute to the operation of an eligible renewable
electrical generating facility, such as a community-owned
wind project, a community-owned biomass project, a
community-owned solar project, or a community methane
digester processing livestock waste from multiple sources;
and

(2) individual units, apartments, or properties owned
or leased by multiple customers and collectively served by
a common eligible renewable electrical generating
facility, such as an apartment building served by
photovoltaic panels on the roof.

For the purposes of this subsection (l), "meter
aggregation" means the combination of reading and billing on a
pro rata basis for the types of eligible customers described in
this Section.

(m) Nothing in this Section shall affect the right of an electricity provider to continue to provide, or the right of a retail customer to continue to receive service pursuant to a contract for electric service between the electricity provider and the retail customer in accordance with the prices, terms, and conditions provided for in that contract. Either the electricity provider or the customer may require compliance with the prices, terms, and conditions of the contract. (Source: P.A. 97-616, eff. 10-26-11; 97-646, eff. 12-30-11; 97-824, eff. 7-18-12.)

(220 ILCS 5/16-107.6 new)

Sec. 16-107.6. Net electricity metering.

(a) This Section shall apply to an electric utility, and the customers to which the utility provides delivery services, beginning on the date that the utility's tariff to recover its delivery services costs through a demand-based rate pursuant to subsection (a) of Section 9-105 of this Act takes effect, if any. A retail customer that is receiving net metering service pursuant to Section 16-107.5 of this Act at the time this Section applies to such electric utility, shall be entitled to continue such service pursuant to subsections (c) and (e) of Section 16-107.7 of this Act.

(b) As used in this Section:

"Eligible customer" means a retail customer that owns or
operates a solar, wind, or other eligible renewable electrical
generating facility with a rated capacity of not more than
2,000 kilowatts that is located on the customer's premises and
is intended to offset the customer's own electrical
requirements.

"Electricity provider" means an electric utility or
alternative retail electric supplier.

"Eligible renewable electrical generating facility" means
a generator that is connected to the utility's distribution
system at a voltage of no greater than 12.47 kilovolts and is
powered by solar electric energy, wind, dedicated crops grown
for electricity generation, agricultural residues, untreated
and unadulterated wood waste, landscape trimmings, livestock
manure, anaerobic digestion of livestock or food processing
waste, fuel cells or microturbines powered by renewable fuels,
or hydroelectric energy.

"Net electricity metering" or "net metering" means the
measurement, during the billing period applicable to an
eligible customer, of the net amount of electricity supplied by
an electricity provider to the customer's premises or provided
to the electricity provider by the customer.

(c) A net metering facility shall be equipped with metering
equipment that can measure the flow of electricity in both
directions at the same rate. The electricity provider may
arrange for the local electric utility or a meter service
provider to install and maintain metering equipment capable of
measuring the flow of electricity both into and out of the eligible customer's facility at the same rate and ratio, typically through the use of a dual channel meter.

(d) An electricity provider shall charge or credit for the net electricity supplied to eligible customers whose electric delivery service is provided and measured on a kilowatt demand basis and electric supply service is not provided based on hourly or time of use pricing in the following manner:

(1) If the amount of electricity used by the customer during the billing period exceeds the amount of electricity produced by the customer, then the electricity provider shall charge the customer for the net kilowatt-hour based electricity charges reflected in the customer's electric service rate supplied to and used by the customer as provided in subsection (f) of this Section.

(2) If the amount of electricity produced by a customer during the billing period exceeds the amount of electricity used by the customer during that billing period, then the electricity provider supplying that customer shall apply a 1:1 kilowatt-hour credit that reflects the kilowatt-hour based charges in the customer's electric service rate to a subsequent bill for service to the customer for the net electricity supplied to the electricity provider. The electricity provider shall continue to carry over any excess kilowatt-hour credits earned and apply those credits to subsequent billing periods to offset any
customer-generator consumption in those billing periods until all credits are used or until the end of the annualized period. 

(3) At the end of the year or annualized over the period that service is supplied by means of net metering, or in the event that the retail customer terminates service with the electricity provider prior to the end of the year or the annualized period, any remaining credits in the customer's account shall expire. 

(e) An electricity provider shall charge or credit for the net electricity supplied to eligible customers whose electric delivery service is provided and measured on a kilowatt-demand basis and electric supply service is provided based on hourly or time of use pricing in the following manner: 

(1) If the amount of electricity used by the customer during any hourly or time-of-use period exceeds the amount of electricity produced by the customer, then the electricity provider shall charge the customer for the net electricity supplied to and used by the customer as provided in subsection (f) of this Section. 

(2) If the amount of electricity produced by a customer during any hourly or time of use period exceeds the amount of electricity used by the customer during that hourly or time of use period, the energy provider shall calculate an energy credit for the net kilowatt-hours produced in such period. The value of the energy credit shall be calculated
using the same price per kilowatt-hour as the electric
service provider would charge for kilowatt-hour energy
sales during that same hourly or time of use period.

(f) An electricity provider shall provide electric service
to eligible customers who utilize net metering at
non-discriminatory rates that are identical, with respect to
rate structure, retail rate components, and any monthly
charges, to the rates that the customer would be charged if not
a net metering customer. An electricity provider shall charge
the customer for the net electricity supplied to and used by
the customer according to the terms of the contract or tariff
to which the same customer would be assigned or be eligible for
if the customer was not a net metering customer. An electricity
provider shall not charge net metering customers any fee or
charge or require additional equipment, insurance, or any other
requirements not specifically authorized by interconnection
standards authorized by the Commission, unless the fee, charge,
or other requirement would apply to other similarly situated
customers who are not net metering customers. The customer
remains responsible for the gross amount of delivery services
charges and supply-related charges that are kilowatt based, as
well as all taxes and fees related to such charges. The
customer also remains responsible for all taxes and fees that
would otherwise be applicable to the net amount of electricity
used by the customer. Subsections (d) and (e) of this Section
shall not be construed to prevent an arms-length agreement
between an electricity provider and an eligible customer that sets forth different prices, terms, and conditions for the provision of net metering service, including, but not limited to, the provision of the appropriate metering equipment for non-residential customers. Nothing in this subsection (f) shall be interpreted to mandate that a utility that is only required to provide delivery services to a given customer must also sell electricity to such customer.

(g) For purposes of federal and State laws providing renewable energy credits or greenhouse gas credits, an electricity provider shall not, by virtue of providing net metering, be treated as owning and having title to the renewable energy attributes, renewable energy credits, and greenhouse gas emission credits related to any electricity produced by the qualified generating unit. The electric utility may not condition participation in a net metering program on the signing over of a customer's renewable energy credits; provided, however, this subsection (g) shall not be construed to prevent an arms-length agreement between an electricity provider and an eligible customer that sets forth the ownership or title of the credits.

(h) Each electricity provider shall maintain records and report annually to the Commission the total number of net metering customers served by the electricity provider, as well as the type, capacity, and energy sources of the generating systems used by the net metering customers. Nothing in this
Section shall limit the ability of an electricity provider to request the redaction of confidential business information.

(i) Notwithstanding the definition of "eligible customer" in subsection (c) of this Section, each electricity provider shall allow meter aggregation for the purposes of net metering on:

(1) properties owned or leased by multiple customers that contribute to the operation of an eligible renewable electrical generating facility through an ownership or leasehold interest of at least 2 kilowatts in such facility, such as a community-owned biomass project, a community-owned solar project, or a community methane digester processing livestock waste from multiple sources, provided that the address at which each such customer receives electric service from the electric utility must be located within 5 miles of the location of the facility and that the facility is also located within the utility's service territory; and

(2) individual units, apartments, or properties located in a single building that are owned or leased by multiple customers and collectively served by a common eligible renewable electrical generating facility, such as an office or apartment building, a shopping center or strip mall served by photovoltaic panels on the roof.

In addition, the demand of the properties, units, or apartments identified in subparagraphs (1) and (2) of this
subsection (i) whose meters are aggregated and that contribute to or are served by an eligible renewable electrical generating facility shall not exceed 2,000 kilowatts in nameplate capacity in total. For the purposes of this subsection (i), "meter aggregation" means the combination of reading and billing on a pro rata basis for the types of customers described in this subsection (i). For purposes of facilitating such reading and billing, the owner or operator of the eligible renewable electrical generating facility shall be responsible for determining the amount of the credit that each customer participating in meter aggregation pursuant to this subsection (i) is to receive in the following manner:

(A) For those participating customers who receive their energy supply from an electricity provider that is an electric utility, the owner or operator shall, on a monthly basis, calculate the monetary value of the energy credit for each such customer that is to be applied to the customer's electric utility bill by the electricity provider. The owner or operator shall calculate such monthly credit for each such customer in accordance with the customer's share of the eligible renewable electric generating facility's output of power and energy for a given month and the cents-per-kilowatt-hour price of power and energy supply service set forth in the applicable tariff or
tariffs of the customer's electricity provider for that same month. In the event that more than one price for power and energy supply service was in effect during the applicable month, the owner or operator shall calculate the credit based on an appropriate weighting. The owner or operator shall electronically transmit such calculations and data to the electricity provider, in a format or method as agreed to by the electricity provider and the owner or operator, on a monthly basis so that the electricity provider can reflect the monetary credits on customers' electric utility bills. The electricity provider shall be permitted to revise its tariffs to implement the provisions of this amendatory Act of the 99th General Assembly. The owner or operator shall separately provide the electricity provider with the documentation detailing the calculations supporting the credit in the manner set forth in the applicable tariff.

(B) For those participating customers who receive their energy supply from an alternative retail electric supplier, the owner or operator shall determine the monthly credit, in a dollar amount, and provide the information to the alternative retail electric supplier in a manner set forth in such alternative retail electric supplier's meter.
aggregation program, or as otherwise agreed between
the parties.

(j) Each electric utility subject to this Section shall
file a tariff to implement the provisions of subsection (i) of
this Section in conjunction with the tariff that the utility
files to implement subsection (a) of Section 9-105 of this Act,
which shall, consistent with the provisions of such subsection,
describe the terms and conditions pursuant to which owners or
operators of qualifying properties, units, or apartments may
participate in meter aggregation for purposes of net metering.
The tariff approved pursuant to this subsection shall become
effective on the same date that the tariff implementing
subsection (a) of Section 9-105 of this Act becomes effective.

(k) Nothing in this Section shall affect the right of an
electricity provider to continue to provide, or the right of a
retail customer to continue to receive service pursuant to a
contract for electric service between the electricity provider
and the retail customer in accordance with the prices, terms,
and conditions provided for in that contract. Either the
electricity provider or the customer may require compliance
with the prices, terms, and conditions of the contract.

(220 ILCS 5/16-107.7 new)
Sec. 16-107.7. Distributed generation rebate.

(a) In this Section:
"Smart inverter" means a device that converts direct
current into alternating current and can autonomously contribute to grid support during excursions from normal operating voltage and frequency conditions by providing each of the following: dynamic reactive and real power support, voltage and frequency ride-through, ramp rate controls, communication systems with ability to accept external commands, and other functions from the electric utility.

"Threshold date" means:

(1) For distributed generation that is located in the service territory of an electric utility that serves more than 3,000,000 retail customers in the State, the date on which the combined nameplate capacity of such distributed generation located in such service territory that is enrolled in the rebate programs implemented pursuant to this Section reaches 150 megawatts; and

(2) For distributed generation that is located in the service territory of an electric utility that serves 3,000,000 or less retail customers in the State, the date on which the combined nameplate capacity of distributed generation located in such service territory that is enrolled the rebate programs implemented pursuant to this Section reaches 75 megawatts.

(b) An electric utility that serves more than 200,000 customers in the State may file a petition with the Commission requesting approval of the utility's tariff to provide a rebate to a retail customer who owns or operates distributed
generation that meets the following criteria:

(1) has a nameplate generating capacity no greater than 2,000 kilowatts and is designed not to exceed the peak load of the customer's premises;

(2) is located on the customer's premises, for the customer's own use, and not for commercial use or sales, including, but not limited to, wholesale sales of electric power and energy;

(3) is located in the electric utility's service territory; and

(4) is connected to the utility's distribution system at a voltage of no greater than 12.47 kilovolts by means of the inverter or smart inverter required by this Section, as applicable.

The tariff shall provide that the utility shall be permitted to operate and control the smart inverter associated with the distributed generation that is the subject of the rebate and shall address the terms and conditions of the operation and the compensation associated with the operation.

If an electric utility elects to recover its costs of providing delivery services to retail customers pursuant to subsection (a) of Section 9-105 of this Act, it shall be required to file the proposed tariffs described in this Section. Such tariff or tariffs, as applicable, shall be filed with the tariffs filed to implement subsection (a) of Section 9-105 of this Act, and shall become effective upon the same
date that the tariffs filed to implement subsection (a) of Section 9-105 become effective.

(c) The proposed tariff authorized by subsection (b) of this Section shall include the following participation terms and formulae to calculate the value of the rebates to be applied pursuant to this Section for distributed generation that satisfies the criteria set forth in subsection (b) of this Section:

(1) Until the earlier of the threshold date or December 31, 2021:

(A) Retail customers may, as applicable, make the following elections:

   (i) Residential customers that are taking service pursuant to a net metering program offered by an electricity provider under the terms of Section 16-107.5 of this Act on the effective date of this amendatory Act of the 99th General Assembly may elect to either continue to take such service pursuant to the terms of such program as in effect on such effective date for the useful life of the customer's eligible renewable electric generating facility as defined in such Section, or file an application to receive a rebate pursuant to the terms of this Section, provided that such application must be submitted within 6 months after the effective date of the tariff approved
under this subsection (c) and the inverter associated with such customer's distributed generation need not be a smart inverter.

(ii) Residential customers that begin taking service pursuant to a net metering program offered by an electricity provider under the terms of Section 16-107.5 of this Act after the effective date of this amendatory Act of the 99th General Assembly may elect to either continue to take such service pursuant to the terms of such program as in effect on such effective date until December 31, 2021, or file an application to receive a rebate pursuant to the terms of this Section, provided, however, that the inverter associated with the customer's distributed generation must be a smart inverter.

(iii) Non-residential customers that are taking service pursuant to a net metering program offered by an electricity provider under the terms of Section 16-107.5 of this Act on the effective date of this amendatory Act of the 99th General Assembly may apply for a rebate as provided for in this Section, provided that the inverter associated with such customer's distributed generation need not be a smart inverter.

(iv) Non-residential customers that begin
taking service pursuant to a net metering program offered by an electricity provider under the terms of Section 16-107.5 of this Act after the effective date of this amendatory Act of the 99th General Assembly may apply for a rebate as provided for in this Section; however, the inverter associated with the customer's distributed generation must be a smart inverter.

Upon approval of a rebate application submitted under items (i) or (ii) of this subparagraph (A), the retail customer shall no longer be entitled to receive any delivery service credits for the excess electricity generated by its facility.

(B) The value of the rebates shall be:

(i) $1,000 per kilowatt of nameplate generating capacity, measured as nominal DC power output, of a residential customer's distributed generation; and

(ii) $500 per kilowatt of nameplate generating capacity, measured as nominal DC power output, of a non-residential customer's distributed generation.

(2) After the threshold date but until no later than December 31, 2021:

(A) Retail customers may, as applicable, make the following elections:

(i) Residential customers that begin taking
service pursuant to a net metering program offered by an electricity provider under the terms of Section 16-107.5 of this Act after the threshold date may elect to either continue to take such service pursuant to the terms of such program until December 31, 2021 or, within 6 months after the date of the customer's first bill that reflects net metering, file an application to receive a rebate pursuant to the terms of this Section, provided, however, that the inverter associated with such customer's distributed generation must be a smart inverter. Upon approval of such application, the retail customer shall no longer be entitled to receive any delivery service credits for the excess electricity generated by its facility.

(ii) Non-residential customers that begin taking service pursuant to a net metering program offered by an electricity provider under the terms of Section 16-107.5 of this Act after the threshold date may apply for a rebate as provided for in this Section; however, the inverter associated with the customer's distributed generation must be a smart inverter.

(B) The value of the rebates shall be:

(i) $750 per kilowatt of nameplate generating capacity, measured as nominal DC power output, of a
residential customer's distributed generation; and

(ii) $325 per kilowatt of nameplate generating capacity, measured as nominal DC power output, of a non-residential customer's distributed generation.

(3) The value of the rebates identified in this subsection (c) shall be adjusted in proportion to the actual nameplate capacity of the distributed generation that is the subject of a rebate application submitted pursuant to this Section.

(d) The Commission shall review the proposed tariff submitted pursuant to subsections (b) and (c) of this Section and may make changes to the tariff that are consistent with this Section and with the Commission's authority under Article IX of this Act, subject to notice and hearing. Following notice and hearing, the Commission shall issue an order approving, or approving with modification, such tariff no later than 240 days after the utility files its tariff.

(e) No later than June 1, 2021, an electric utility that elected, or was required, to file a tariff pursuant to this Section shall file a tariff with the Commission that proposes an annual process and formula for calculating the value of rebates for the retail customers described in subsection (b) of this Section that submit rebate applications after December 31, 2021. The value of such rebates shall be cost-based and reflect the value of the distributed generation to the distribution system at the location at which it is interconnected. Retail
customers who elect to submit rebate applications after December 31, 2021, including all retail customers who are taking net metering and whose delivery service credits will terminate after December 31, 2021, shall receive the rebate provided for by this Section that is in effect at the time the application is submitted less the total amount of delivery service credits that the retail customer has received under any net metering program. The retail customer shall then no longer be entitled to receive any delivery service credits for the excess electricity generated by its facility. The Commission shall review and, after notice and hearing, approve, or approve with modification, the utility's proposed tariff. If the Commission modifies such tariff, the modifications shall be consistent with this Section and the Commission's authority under Article IX of this Act.

(f) Notwithstanding any provision of this Act to the contrary, the owner, developer, or customer of a generation facility that is part of a meter aggregation program provided pursuant to subsection (i) of Section 16-107.6 of this Act shall also be eligible to apply for the rebate described in subsections (b) and (c) of this Section. A customer of the generation facility may apply for a rebate only if the owner or developer has not already submitted an application, and may be allowed an amount as described in subsection (c) or (e) of this Section applicable to such customer on the date that the application is submitted. If the owner or developer submits the
application, the amount of the rebate shall be in proportion to
the mix of customers that subscribe to the output of the
facility on the date that an application for the rebate is
submitted, less any rebates that have been applied for or
provided to customers of the generation facility. An
application for a rebate for a portion of a project described
in this subsection (d) may be submitted at or after the time
that a related request for net metering is made.

(g) No later than 180 days after the utility receives an
application for a rebate pursuant to its tariff approved under
subsection (b) or (c) of this Section, the utility shall issue
a rebate to the applicant pursuant to the terms of the tariff.
In the event the application is incomplete or the utility is
otherwise unable to calculate the payment based on the
information provided by the owner, the utility shall issue the
payment no later than 180 days after the application is
complete or all requested information is received.

(h) An electric utility shall recover from its retail
customers all of the costs of the rebates made pursuant to a
tariff or tariffs placed into effect under this Section,
including, but not limited to, the value of the rebates and all
costs incurred by the utility to comply with and implement this
Section, consistent with the following provisions:

(1) The utility shall defer the full amount of its
costs incurred pursuant to this Section as a regulatory
asset. The total costs deferred as a regulatory asset shall
be amortized over a 15-year period. The unamortized balance shall be recognized as of December 31 for a given year. The utility shall also earn a return on the total of the unamortized balance of the regulatory assets, less any deferred taxes related to the unamortized balance, at an annual rate equal to the utility's weighted average cost of capital that includes, based on a year-end capital structure, the utility's actual cost of debt for the applicable calendar year and a cost of equity, which shall be calculated as the sum of (i) the average for the applicable calendar year of the monthly average yields of 30-year U.S. Treasury bonds published by the Board of Governors of the Federal Reserve System in its weekly H.15 Statistical Release or successor publication; and (ii) 580 basis points, including a revenue conversion factor calculated to recover or refund all additional income taxes that may be payable or receivable as a result of that return.

When an electric utility creates a regulatory asset pursuant to the provisions of this Section, the costs are recovered over a period during which customers also receive a benefit, which is in the public interest. Accordingly, it is the intent of the General Assembly that an electric utility that elects to create a regulatory asset pursuant to the provisions of this Section shall recover all of the associated costs, including, but not limited to, its cost
of capital as set forth in this Section. After the Commission has approved the prudence and reasonableness of the costs that comprise the regulatory asset, the electric utility shall be permitted to recover all such costs, and the value and recoverability through rates of the associated regulatory asset shall not be limited, altered, impaired, or reduced.

(2) The utility, at its election, may recover all of the costs it incurs pursuant to this Section as part of a filing for a general increase in rates under Article IX of this Act, as part of an annual filing to update a performance-based formula rate pursuant to subsection (d) of Section 16-108.5 of this Act, or through an automatic adjustment clause tariff. If the utility elects to recover the costs it incurs under this Section through an automatic adjustment clause tariff, the utility may file its proposed tariff together with the tariff it files pursuant to subsection (b) of this Section or at a later time. The proposed tariff shall provide for an annual reconciliation, less any deferred taxes related to the reconciliation, with interest at an annual rate of return equal to the utility's weighted average cost of capital as calculated pursuant to paragraph (1) of this subsection (h), including a revenue conversion factor calculated to recover or refund all additional income taxes that may be payable or receivable as a result of that return, of the
revenue requirement reflected in rates for each calendar
year, beginning with the calendar year in which the utility
files its automatic adjustment clause tariff pursuant to
this subsection (h), with what the revenue requirement
would have been had the actual cost information for the
applicable calendar year been available at the filing date.
The Commission shall review the proposed tariff and may
make changes to the tariff that are consistent with this
Section and with the Commission's authority under Article
IX of this Act, subject to notice and hearing. Following
notice and hearing, the Commission shall issue an order
approving, or approving with modification, such tariff no
later than 240 days after the utility files its tariff.

(i) Within 180 days after the effective date of this
amendatory Act of the 99th General Assembly, each electric
utility with net metering customers on such effective date
shall provide notice of the availability of rebates under this
Section. Subsequent to the effective date, any entity that
offers in the State, for sale or lease, distributed generation
and estimates the dollar saving attributable to such
distributed generation shall provide estimates based on both
delivery service credits and the rebates available under this
Section.

(220 ILCS 5/16-108)

Sec. 16-108. Recovery of costs associated with the
provision of delivery services.

(a) An electric utility shall file a delivery services tariff with the Commission at least 210 days prior to the date that it is required to begin offering such services pursuant to this Act. An electric utility shall provide the components of delivery services that are subject to the jurisdiction of the Federal Energy Regulatory Commission at the same prices, terms and conditions set forth in its applicable tariff as approved or allowed into effect by that Commission. The Commission shall otherwise have the authority pursuant to Article IX to review, approve, and modify the prices, terms and conditions of those components of delivery services not subject to the jurisdiction of the Federal Energy Regulatory Commission, including the authority to determine the extent to which such delivery services should be offered on an unbundled basis. In making any such determination the Commission shall consider, at a minimum, the effect of additional unbundling on (i) the objective of just and reasonable rates, (ii) electric utility employees, and (iii) the development of competitive markets for electric energy services in Illinois.

(b) The Commission shall enter an order approving, or approving as modified, the delivery services tariff no later than 30 days prior to the date on which the electric utility must commence offering such services. The Commission may subsequently modify such tariff pursuant to this Act.

(c) The electric utility's tariffs shall define the classes
of its customers for purposes of delivery services charges. Delivery services shall be priced and made available to all retail customers electing delivery services in each such class on a nondiscriminatory basis regardless of whether the retail customer chooses the electric utility, an affiliate of the electric utility, or another entity as its supplier of electric power and energy. Charges for delivery services shall be cost based, and shall allow the electric utility to recover the costs of providing delivery services through its charges to its delivery service customers that use the facilities and services associated with such costs. Such costs shall include the costs of owning, operating and maintaining transmission and distribution facilities. The Commission shall also be authorized to consider whether, and if so to what extent, the following costs are appropriately included in the electric utility's delivery services rates: (i) the costs of that portion of generation facilities used for the production and absorption of reactive power in order that retail customers located in the electric utility's service area can receive electric power and energy from suppliers other than the electric utility, and (ii) the costs associated with the use and redispatch of generation facilities to mitigate constraints on the transmission or distribution system in order that retail customers located in the electric utility's service area can receive electric power and energy from suppliers other than the electric utility. Nothing in this subsection shall be
construed as directing the Commission to allocate any of the costs described in (i) or (ii) that are found to be appropriately included in the electric utility's delivery services rates to any particular customer group or geographic area in setting delivery services rates.

(d) The Commission shall establish charges, terms and conditions for delivery services that are just and reasonable and shall take into account customer impacts when establishing such charges. In establishing charges, terms and conditions for delivery services, the Commission shall take into account voltage level differences. A retail customer shall have the option to request to purchase electric service at any delivery service voltage reasonably and technically feasible from the electric facilities serving that customer's premises provided that there are no significant adverse impacts upon system reliability or system efficiency. A retail customer shall also have the option to request to purchase electric service at any point of delivery that is reasonably and technically feasible provided that there are no significant adverse impacts on system reliability or efficiency. Such requests shall not be unreasonably denied.

(e) Electric utilities shall recover the costs of installing, operating or maintaining facilities for the particular benefit of one or more delivery services customers, including without limitation any costs incurred in complying with a customer's request to be served at a different voltage
level, directly from the retail customer or customers for whose benefit the costs were incurred, to the extent such costs are not recovered through the charges referred to in subsections (c) and (d) of this Section.

(f) An electric utility shall be entitled but not required to implement transition charges in conjunction with the offering of delivery services pursuant to Section 16-104. If an electric utility implements transition charges, it shall implement such charges for all delivery services customers and for all customers described in subsection (h), but shall not implement transition charges for power and energy that a retail customer takes from cogeneration or self-generation facilities located on that retail customer's premises, if such facilities meet the following criteria:

(i) the cogeneration or self-generation facilities serve a single retail customer and are located on that retail customer's premises (for purposes of this subparagraph and subparagraph (ii), an industrial or manufacturing retail customer and a third party contractor that is served by such industrial or manufacturing customer through such retail customer's own electrical distribution facilities under the circumstances described in subsection (vi) of the definition of "alternative retail electric supplier" set forth in Section 16-102, shall be considered a single retail customer);

(ii) the cogeneration or self-generation facilities
either (A) are sized pursuant to generally accepted engineering standards for the retail customer's electrical load at that premises (taking into account standby or other reliability considerations related to that retail customer's operations at that site) or (B) if the facility is a cogeneration facility located on the retail customer's premises, the retail customer is the thermal host for that facility and the facility has been designed to meet that retail customer's thermal energy requirements resulting in electrical output beyond that retail customer's electrical demand at that premises, comply with the operating and efficiency standards applicable to "qualifying facilities" specified in title 18 Code of Federal Regulations Section 292.205 as in effect on the effective date of this amendatory Act of 1999;

(iii) the retail customer on whose premises the facilities are located either has an exclusive right to receive, and corresponding obligation to pay for, all of the electrical capacity of the facility, or in the case of a cogeneration facility that has been designed to meet the retail customer's thermal energy requirements at that premises, an identified amount of the electrical capacity of the facility, over a minimum 5-year period; and

(iv) if the cogeneration facility is sized for the retail customer's thermal load at that premises but exceeds the electrical load, any sales of excess power or energy
are made only at wholesale, are subject to the jurisdiction of the Federal Energy Regulatory Commission, and are not for the purpose of circumventing the provisions of this subsection (f).

If a generation facility located at a retail customer's premises does not meet the above criteria, an electric utility implementing transition charges shall implement a transition charge until December 31, 2006 for any power and energy taken by such retail customer from such facility as if such power and energy had been delivered by the electric utility. Provided, however, that an industrial retail customer that is taking power from a generation facility that does not meet the above criteria but that is located on such customer's premises will not be subject to a transition charge for the power and energy taken by such retail customer from such generation facility if the facility does not serve any other retail customer and either was installed on behalf of the customer and for its own use prior to January 1, 1997, or is both predominantly fueled by byproducts of such customer's manufacturing process at such premises and sells or offers an average of 300 megawatts or more of electricity produced from such generation facility into the wholesale market. Such charges shall be calculated as provided in Section 16-102, and shall be collected on each kilowatt-hour delivered under a delivery services tariff to a retail customer from the date the customer first takes delivery services until December 31, 2006 except as provided in
subsection (h) of this Section. Provided, however, that an
electric utility, other than an electric utility providing
service to at least 1,000,000 customers in this State on
January 1, 1999, shall be entitled to petition for entry of an
order by the Commission authorizing the electric utility to
implement transition charges for an additional period ending no
later than December 31, 2008. The electric utility shall file
its petition with supporting evidence no earlier than 16
months, and no later than 12 months, prior to December 31,
2006. The Commission shall hold a hearing on the electric
utility's petition and shall enter its order no later than 8
months after the petition is filed. The Commission shall
determine whether and to what extent the electric utility shall
be authorized to implement transition charges for an additional
period. The Commission may authorize the electric utility to
implement transition charges for some or all of the additional
period, and shall determine the mitigation factors to be used
in implementing such transition charges; provided, that the
Commission shall not authorize mitigation factors less than
110% of those in effect during the 12 months ended December 31,
2006. In making its determination, the Commission shall
consider the following factors: the necessity to implement
transition charges for an additional period in order to
maintain the financial integrity of the electric utility; the
prudence of the electric utility's actions in reducing its
costs since the effective date of this amendatory Act of 1997;
the ability of the electric utility to provide safe, adequate and reliable service to retail customers in its service area; and the impact on competition of allowing the electric utility to implement transition charges for the additional period.

(g) The electric utility shall file tariffs that establish the transition charges to be paid by each class of customers to the electric utility in conjunction with the provision of delivery services. The electric utility's tariffs shall define the classes of its customers for purposes of calculating transition charges. The electric utility's tariffs shall provide for the calculation of transition charges on a customer-specific basis for any retail customer whose average monthly maximum electrical demand on the electric utility's system during the 6 months with the customer's highest monthly maximum electrical demands equals or exceeds 3.0 megawatts for electric utilities having more than 1,000,000 customers, and for other electric utilities for any customer that has an average monthly maximum electrical demand on the electric utility's system of one megawatt or more, and (A) for which there exists data on the customer's usage during the 3 years preceding the date that the customer became eligible to take delivery services, or (B) for which there does not exist data on the customer's usage during the 3 years preceding the date that the customer became eligible to take delivery services, if in the electric utility's reasonable judgment there exists comparable usage information or a sufficient basis to develop
such information, and further provided that the electric
utility can require customers for which an individual
calculation is made to sign contracts that set forth the
transition charges to be paid by the customer to the electric
utility pursuant to the tariff.

(h) An electric utility shall also be entitled to file
tariffs that allow it to collect transition charges from retail
customers in the electric utility's service area that do not
take delivery services but that take electric power or energy
from an alternative retail electric supplier or from an
electric utility other than the electric utility in whose
service area the customer is located. Such charges shall be
calculated, in accordance with the definition of transition
charges in Section 16-102, for the period of time that the
customer would be obligated to pay transition charges if it
were taking delivery services, except that no deduction for
delivery services revenues shall be made in such calculation,
and usage data from the customer's class shall be used where
historical usage data is not available for the individual
customer. The customer shall be obligated to pay such charges
on a lump sum basis on or before the date on which the customer
commences to take service from the alternative retail electric
supplier or other electric utility, provided, that the electric
utility in whose service area the customer is located shall
offer the customer the option of signing a contract pursuant to
which the customer pays such charges ratably over the period in
which the charges would otherwise have applied.

(i) An electric utility shall be entitled to add to the bills of delivery services customers charges pursuant to Sections 9-221, 9-222 (except as provided in Section 9-222.1), and Section 16-114 of this Act, Section 5-5 of the Electricity Infrastructure Maintenance Fee Law, Section 6-5 of the Renewable Energy, Energy Efficiency, and Coal Resources Development Law of 1997, and Section 13 of the Energy Assistance Act.

(j) If a retail customer that obtains electric power and energy from cogeneration or self-generation facilities installed for its own use on or before January 1, 1997, subsequently takes service from an alternative retail electric supplier or an electric utility other than the electric utility in whose service area the customer is located for any portion of the customer's electric power and energy requirements formerly obtained from those facilities (including that amount purchased from the utility in lieu of such generation and not as standby power purchases, under a cogeneration displacement tariff in effect as of the effective date of this amendatory Act of 1997), the transition charges otherwise applicable pursuant to subsections (f), (g), or (h) of this Section shall not be applicable in any year to that portion of the customer's electric power and energy requirements formerly obtained from those facilities, provided, that for purposes of this subsection (j), such portion shall not exceed the average
number of kilowatt-hours per year obtained from the
cogeneration or self-generation facilities during the 3 years
prior to the date on which the customer became eligible for
delivery services, except as provided in subsection (f) of
Section 16-110.

(k) The electric utility shall be entitled to recover
through tariffed charges all of the costs associated with the
purchase of zero emission credits from zero emission resources
to meet the requirements of subsection (d-5) of Section 1-75 of
the Illinois Power Agency Act. The costs shall be allocated
across all retail customers through a single, uniform cents per
kilowatt-hour charge applicable to all retail customers, which
shall appear as a separate line item on each customer's bill.
Beginning June 1, 2018, the electric utility shall be entitled
to recover through tariffed charges all of the costs associated
with the purchase of renewable energy resources to meet the
renewable energy resource standards of subsection (c) of
Section 1-75 of the Illinois Power Agency Act, pursuant to the
electric utility's procurement plan as approved in accordance
with Section 16-111.5 of this Act. The costs associated with
the purchase of renewable energy resources shall be allocated
across all retail customers in proportion to the amount of
renewable energy resources the utility procures for such
customers through a single, uniform cents per kilowatt-hour
charge applicable to such retail customers, which shall appear
as a separate line item on each such customer's bill.
The electric utility shall be entitled to recover all costs associated with the purchase of renewable energy resources and zero emission credits from zero emission resources through an automatic adjustment clause tariff applicable to all of the utility's retail customers that allows the electric utility to adjust its tariffed charges on a quarterly basis for changes in its costs incurred to purchase such resources and credits, if any, without the need to file a general delivery services rate case. The electric utility's collections pursuant to such an automatic adjustment clause tariff shall be subject to annual review, reconciliation, and true-up against actual costs by the Commission pursuant to a procedure that shall be specified in the electric utility's automatic adjustment clause tariff and that shall be approved by the Commission in connection with its approval of such tariff. The procedure shall provide that any difference between the electric utility's collection pursuant to the automatic adjustment charge for an annual period and the electric utility's actual costs of renewable energy resources and zero emission credits from zero emission resources for that same annual period shall be refunded to or collected from, as applicable, the electric utility's retail customers in subsequent periods.

Nothing in this subsection (k) is intended to affect, limit, or change the right of the electric utility to recover the costs associated with the procurement of renewable energy resources for periods commencing before, on, or after June 1,
2018, as otherwise provided in the Illinois Power Agency Act.

(220 ILCS 5/16-108.9 new)

Sec. 16-108.9. Microgrid pilot.

(a) The General Assembly finds that the electric industry is undergoing rapid transformation, including fundamental changes regarding how electricity is generated, procured, and delivered and how customers are choosing to participate in the supply and delivery of electricity to and from the electric grid. Building upon the State's goals to increase the procurement of electricity from renewable energy resources and distributed generation, the General Assembly finds that it is now necessary to study how the electric grid could be enhanced through reliance on the diverse supply options being connected to the grid by traditional suppliers and new market participants, such as the utility's customers. Specifically, the General Assembly finds that these developments present unprecedented opportunities to strengthen the resilience and security of the electric grid, particularly with respect to the grid's support of the State's critical infrastructure dedicated to public safety and health purposes. The General Assembly therefore finds that it is beneficial to undertake the microgrid pilot described in this Section to explore a variety of objectives, including, but not limited to, (i) alternatives to upgrading the conventional electric grid, (ii) ways to
improve electric grid resiliency, security, and outage management for critical facilities and customers and thus reduce the frequency, duration, and cost of major outages, and (iii) how to improve the safety and security of critical electric infrastructure, including cyber security, for the benefit of the public.

(b) An electric utility serving more than 3,000,000 retail customers in Illinois may invest an estimated $250,000,000 to develop, construct, and install up to 5 microgrids in its service territory over a 5-year period that commences upon the date of the Commission's approval of the plan, or approval of the plan on rehearing, whichever is later, submitted pursuant to subsection (d) of this Section. Notwithstanding such investment amount, a utility that elects to undertake the investment described in this subsection (b) shall also be authorized to study, operate, and maintain such microgrids.

An electric utility serving 3,000,000 or less retail customers but more than 500,000 retail customers in Illinois may invest a maximum of $60,000,000 to develop, construct, and install one or more microgrids, as determined in the utility's sole discretion, in its service territory over a 5-year period that commences upon the date of the Commission's approval of the plan, or approval of the plan on rehearing, whichever is later, submitted pursuant to subsection (d) of this Section. Notwithstanding such investment amount, a utility that elects to undertake the investment described in this subsection (b)
shall also be authorized to study, operate, and maintain such microgrids.

For purposes of this Section, "microgrid" means a group of interconnected loads and distributed energy resources with clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid and can connect and disconnect from the grid to enable it to operate in both grid-connected or island modes.

(1) The locations selected to be served by the microgrids shall include critical public health and safety facilities and critical infrastructure and transportation facilities that provide opportunities to study the operation and benefits of the microgrid. Facilities and locations may include, but are not limited to, the following: military; fire fighting; police; aviation; medical and health; HazMat; civil defense and public safety warning services; communications; radiological, chemical and other special weapons defense; water pumping and treatment facilities; and energy delivery. Nothing in this Section shall be interpreted to limit the utility's ability to coordinate with governmental agencies regarding the selection of locations and facilities to be served. Consistent with the provisions of this paragraph (1), an electric utility serving more than 3,000,000 retail customers in Illinois that elects to undertake the investment described in this Section may develop,
construct, operate, maintain, and study microgrids located at or within the following sites in its service territory:

(A) the Bronzeville community of Chicago, whose boundaries are approximately Pershing Road, 31st Street, King Drive and the Dan Ryan Expressway;

(B) the Illinois Medical District as defined by Section 1 of the Illinois Medical District Act;

(C) an airport, as that term is defined by the Illinois Aeronautics Act, that is located in Winnebago County;

(D) a county emergency and disaster services facility; and

(E) the water pumping and treatment facilities located in the city of Chicago Heights.

In the event one or more of the sites approved by the Commission pursuant to subsection (d) of this Section becomes unsuitable or unavailable to accommodate a microgrid project, the electric utility may select an alternative site or sites consistent with the provisions of this paragraph (1). If the utility selects an alternative site or sites, the utility shall submit an informational filing to the Commission that identifies the alternative site or sites within 90 days after such selection.

(2) Notwithstanding any law, rule, or order to the contrary, an electric utility that undertakes the investment authorized by this subsection (b):
(A) shall study electric generating plant and facilities and electric storage plant and facilities that are part of the microgrids, which may include, but not be limited to, the construction, installation, leasing, or ownership of the following technologies: (i) solar photovoltaic facilities; (ii) fuel cells; (iii) natural gas generation, including generation that utilizes combined heat and power; (iv) an electricity storage plant and facilities; (v) geothermal technologies; and (vi) wind turbines;

(B) shall be permitted to use the plant or facilities described in subparagraph (A) of this paragraph (2) as follows: (i) for distribution system purposes, (ii) as a source of power, energy, and ancillary services for retail customers located within the boundaries of the microgrid during interruptions of services on the distribution system serving the microgrid or such customers, provided that the use of the plant and facilities during these periods and the delivery of electric power and energy that they produce shall be considered and treated as a distribution system reliability function and not as a retail sale of power, and (iii) for sales of energy, power, heat, ancillary services, and other related products and services into any available markets, including, but not limited to, wholesale markets, provided that such
sales do not compromise operation of the microgrid; a utility's decision to make or refrain from making such sales in order to maintain the integrity of the microgrid shall not be an unreasonable or imprudent decision;

(C) may upgrade the delivery facilities in and supporting the areas served by and in the vicinity of the microgrid, including, but not limited to, constructing, installing, operating, and maintaining (i) multiple feeders to provide service within and to the microgrid, (ii) distribution automation and other smart grid facilities, which shall be incremental to the investment amounts set forth in Section 16-108.5 of this Act, and (iii) placing underground distribution facilities within and providing service to the microgrid; and

(D) shall not be required to obtain any certificates of public convenience and necessity under Section 8-406 of this Act or any approvals under Sections 9-212, 9-213, or 16-111.5 of this Act.

(c) An electric utility that elects to undertake the investment described in subsection (b) of this Section may, at its election, recover the costs of such investment through an automatic adjustment clause tariff or through a delivery services charge regardless of how the costs are classified on the utility's books and records of account. Regardless of which
cost recovery mechanism the electric utility elects, the utility shall earn a return on the balance of the related plant investment as of December 31 for a given year, less any related accumulated depreciation and any related deferred taxes, at an annual rate equal to the utility's weighted average cost of capital that includes, based on a year-end capital structure, the utility's actual cost of debt for the applicable calendar year and a cost of equity, which shall be calculated as the sum of the (i) the average for the applicable calendar year of the monthly average yields of 30-year U.S. Treasury bonds published by the Board of Governors of the Federal Reserve System in its weekly H.15 Statistical Release or successor publication and (ii) 580 basis points, including a revenue conversion factor calculated to recover or refund all additional income taxes that may be payable or receivable as a result of that return.

In the event the utility elects to file an automatic adjustment clause tariff, such tariff may be filed and established outside the context of a general rate case filing or a filing under subsection (c) or (d) of Section 16-108.5 of this Act. The Commission shall review and, after notice and hearing, by order approve or approve with modification the proposed tariff no later than 90 days after the filing of the tariff. A utility may elect to reflect the charges recovered through the tariff as a separate line item on customers' bills, but shall not be required to do so. A tariff approved and placed into effect pursuant to this Section shall remain in
effect at the discretion of the utility, and the utility may
elect to withdraw the tariff at any time. At such time as the
tariff ceases to be in effect, the utility shall recover its
costs incurred pursuant to this Section through a delivery
services charge regardless of how the costs are categorized or
classified on the utility's books and records of account.

An electric utility that elects to undertake the investment
described in subsection (b) of this Section shall also recover
the costs it incurs to study, operate, and maintain the
microgrid projects pursuant to this Section and may, at its
election, recover such costs through an automatic adjustment
clause tariff placed into effect pursuant to this Section, if
applicable, or through its delivery services charges.

(d) If an electric utility elects to undertake the
investment authorized by subsection (b) of this Section, then
the utility shall submit to the Commission the utility's plan
for developing, constructing, operating, and analyzing
microgrids in its service territory for the 5-year period
commencing upon the plan's approval, or approval of the plan on
rehearing, whichever is later. Such plan shall describe:

(1) the utility's current projections for scope,
    microgrid locations and boundaries, schedule,
    expenditures, and staffing;

(2) the utility's projections regarding the sale into
    wholesale markets of power generated pursuant to the plant
    or facilities described in subparagraph (A) of paragraph
(2) of subsection (b) of this Section, including how such sales will be executed and revenues applied to offset the costs of the microgrid pilot; and

(3) the criteria, including specific performance metrics, for evaluating the extent to which the microgrids developed under this Section achieved the objectives set out in subsection (a) of this Section.

Within 90 days after the utility files its plan pursuant to this subsection (d), the Commission shall review and, after notice and hearing, enter an order approving the plan if it finds that the plan conforms to the requirements of this Section or, if the Commission finds that the plan does not conform to the requirements of this Section, the Commission must enter an order describing in detail the reasons for not approving the plan. The utility may resubmit its plan to address the Commission's concerns, and the Commission shall expeditiously review and by order approve the revised plan if it finds that the plan conforms to the requirements of this Section, provided that such order shall be entered no later than 90 days after the utility resubmits its plan.

No later than 90 days after the close of each plan year, the utility shall submit a report to the Commission that includes any updates to the plan, a schedule for the development of any proposed microgrids for the next plan year, the expenditures made for the prior plan year and cumulatively, an evaluation of the extent to which the objectives of this
microgrid pilot are being achieved, and the number of full-time
equivalent jobs created for the prior plan year and
cumulatively. Within 60 days after the utility files its annual
report, the Commission may enter into an investigation of the
report. If the Commission commences an investigation, it must,
after notice and hearing, enter an order approving the report
or approving the report with modification necessary to bring it
into compliance with this Section no later than 180 days after
the utility files such report. If the Commission does not
initiate an investigation within 60 days after the utility
files its annual report, then the filing shall be deemed
accepted by the Commission.

The utility may continue operating, maintaining, and
studying the microgrids developed and constructed pursuant to
this Section following the end of the 5-year plan period, and
the costs incurred by the utility regarding such continued
operation, maintenance and studying and to comply with the
requirements of this Section shall continue to be recoverable
following the end of the 5-year plan period through the
automatic adjustment clause tariff authorized by this Section
or other cost recovery mechanism elected by the utility.

However, any generating or storage facility that becomes
inoperable after the initial 5-year period may not be replaced
without the approval of the Commission unless the facility will
be used solely for the purposes described in subparagraph (B)
of paragraph (2) of subsection (b) of this Section.
To the extent feasible and consistent with State and federal law, the investments made pursuant to this Section should provide employment opportunities for all segments of the population and workforce, including minority-owned and female-owned business enterprises, and shall not, consistent with State and federal law, discriminate based on race or socioeconomic status.

(e) No later than 365 days following the end of the 5-year plan period, the electric utility shall submit its final report to the Commission evaluating the extent to which the objectives of this microgrid pilot have been achieved, reporting on its performance under the metrics established in the plan, and proposing any additional study or action required to continue the further development of microgrids in the electric utility's service territory. Thereafter, the Commission may convene a workshop or workshops to discuss the results of the evaluation reflected in the final report. In addition, an electric utility that serves more than 3,000,000 retail customers in the State shall demonstrate that it created an average of 50 full-time equivalent jobs in Illinois, per microgrid project, during the construction and operation of the microgrids over a 5-year period. The jobs shall include direct jobs, contractor positions, and induced jobs. If the Commission enters an order finding, after notice and hearing, that the utility did not satisfy its job commitment described in this subsection (e) for reasons that are reasonably within its control, then the
Commission shall also determine, after consideration of the
evidence, including, but not limited to, evidence submitted by
the Department of Commerce and Economic Opportunity and the
utility, the deficiency in the number of full-time equivalent
jobs due to such failure. The Commission shall notify the
Department of any proceeding that is initiated pursuant to this
subsection (e). For each full-time equivalent job deficiency
that the Commission finds as set forth in this subsection (e),
the utility shall, within 30 days after the entry of the
Commission's order, pay $6,000 to a fund for training grants
administered under Section 605-800 of the Department of
Commerce and Economic Opportunity Law, which shall not be a
recoverable expense.

No later than 365 days following the date on which the
utility submits its final report pursuant to this subsection
(e), the Commission shall submit a report to the General
Assembly evaluating the extent to which the objectives of the
microgrid pilot have been achieved, reporting on the utility's
performance under the metrics established in its plan, and
proposing any additional study or action required to continue
the further development of microgrids in the utility's service
territory.

(f) In no event, absent General Assembly approval, shall
the capital investment costs incurred by an electric utility
pursuant to this Section exceed $300,000,000 for a utility that
serves more than 3,000,000 retail customers in the State. If
the utility's updated cost estimates for implementing its plan exceed the limitation imposed by this subsection (f), then it shall submit a report to the Commission that identifies the increased costs and explains the reason or reasons for the increased costs no later than the year in which the utility estimates it will exceed the limitation. The Commission shall review the report and shall, within 90 days after the utility files the report, report to the General Assembly its findings regarding the utility's report. If the General Assembly does not amend the limitation imposed by this subsection (f), then the utility may modify its plan so as not to exceed the limitation imposed by this subsection (f) and may propose corresponding changes in its plan, and the Commission may modify the metrics established pursuant to this Section accordingly.

(g) All facilities and equipment installed pursuant to this Section shall be considered and functionalized for ratemaking purposes as distribution facilities and equipment for purposes of Articles IX and XVI of this Act, and the expense of operating, maintaining, and studying such facilities shall be considered and functionalized for ratemaking purposes as distribution expense regardless of how the facilities, equipment, and costs are categorized or classified on the utility's books and records of account.

(h) Nothing in this Section is intended to limit or expand the ability of any other entity to develop, construct, or
install a microgrid. In addition, nothing in this Section is intended to limit, expand, or alter otherwise applicable interconnection requirements.

(220 ILCS 5/16-108.10 new)

Sec. 16-108.10. Energy low-income and support program. Beginning in 2017, without obtaining any approvals from the Commission or any other agency, regardless of whether any such approval would otherwise be required, a participating utility that is not a combination utility, as defined by Section 16-108.5 of this Act, shall contribute $10,000,000 per year for 5 years to the energy low-income and support program, which is intended to fund customer assistance programs with the primary purpose being avoidance of imminent disconnection and reconnecting customers who have been disconnected for non-payment. Such programs may include:

(1) a residential hardship program that may partner with community-based organizations, including senior citizen organizations, and provides grants to low-income residential customers, including low-income senior citizens, who demonstrate a hardship;

(2) a program that provides grants and other bill payment concessions to disabled veterans who demonstrate a hardship and members of the armed services or reserve forces of the United States or members of the Illinois National Guard who are on active duty pursuant to an
executive order of the President of the United States, an
act of the Congress of the United States, or an order of
the Governor and who demonstrate a hardship;

(3) a budget assistance program that provides tools and
education to low-income senior citizens to assist them with
obtaining information regarding energy usage and effective
means of managing energy costs;

(4) a non-residential special hardship program that
provides grants to non-residential customers, such as
small businesses and non-profit organizations, that
demonstrate a hardship, including those providing services
to senior citizen and low-income customers; and

(5) a performance-based assistance program that
provides grants to encourage residential customers to make
on-time payments by matching a portion of the customer's
payments or providing credits towards arrearages.

The payments made by a participating utility pursuant to
this Section shall not be a recoverable expense. A
participating utility may elect to fund either new or existing
customer assistance programs, including, but not limited to,
those that are administered by the utility.

Programs that use funds that are provided by an electric
utility to reduce utility bills may be implemented through
tariffs that are filed with and reviewed by the Commission. If
a utility elects to file tariffs with the Commission to
implement all or a portion of the programs, those tariffs
shall, regardless of the date actually filed, be deemed accepted and approved and shall become effective on the first business day after they are filed. The electric utilities whose customers benefit from the funds that are disbursed as contemplated in this Section shall file annual reports documenting the disbursement of those funds with the Commission. The Commission may audit disbursement of the funds to ensure they were disbursed consistently with this Section.

If the Commission finds that a participating utility is no longer eligible to update the performance-based formula rate tariff pursuant to subsection (d) of Section 16-108.5 of this Act or the performance-based formula rate is otherwise terminated, then the participating utility's obligations under this Section shall immediately terminate.

(220 ILCS 5/16-111.5)
Sec. 16-111.5. Provisions relating to procurement.
(a) An electric utility that on December 31, 2005 served at least 100,000 customers in Illinois shall procure power and energy for its eligible retail customers in accordance with the applicable provisions set forth in Section 1-75 of the Illinois Power Agency Act and this Section. Beginning with the planning year commencing on June 1, 2017, such electric utility shall also procure zero emission credits from zero emission resources for all retail customers in its service territory in accordance with the applicable provisions set forth in Section 1-75 of the
Illinois Power Agency Act, and, for years beginning on or after June 1, 2018, the utility shall procure renewable energy resources for all of the utility's retail customers in its service territory in accordance with the applicable provisions set forth in Section 1-75 of the Illinois Power Agency Act and this Section. A small multi-jurisdictional electric utility that on December 31, 2005 served less than 100,000 customers in Illinois may elect to procure power and energy for all or a portion of its eligible Illinois retail customers in accordance with the applicable provisions set forth in this Section and Section 1-75 of the Illinois Power Agency Act. This Section shall not apply to a small multi-jurisdictional utility until such time as a small multi-jurisdictional utility requests the Illinois Power Agency to prepare a procurement plan for its eligible retail customers. "Eligible retail customers" for the purposes of this Section means those retail customers that purchase power and energy from the electric utility under fixed-price bundled service tariffs, other than those retail customers whose service is declared or deemed competitive under Section 16-113 and those other customer groups specified in this Section, including self-generating customers, customers electing hourly pricing, or those customers who are otherwise ineligible for fixed-price bundled tariff service. For those customers that are excluded from the definition of "eligible retail customers" shall not be included in the procurement plan's electric supply service load.
requirements, and the utility shall procure any supply requirements, including capacity, ancillary services, and hourly priced energy, in the applicable markets as needed to serve those customers, provided that the utility may include in its procurement plan load requirements for the load that is associated with those retail customers whose service has been declared or deemed competitive pursuant to Section 16-113 of this Act to the extent that those customers are purchasing power and energy during one of the transition periods identified in subsection (b) of Section 16-113 of this Act.

(b) A procurement plan shall be prepared for each electric utility consistent with the applicable requirements of the Illinois Power Agency Act and this Section. For purposes of this Section, Illinois electric utilities that are affiliated by virtue of a common parent company are considered to be a single electric utility. Small multi-jurisdictional utilities may request a procurement plan for a portion of or all of its Illinois load. Each procurement plan shall analyze the projected balance of supply and demand for those retail customers to be included in the plan's electric supply service requirements, eligible retail customers over a 5-year period, with the first planning year beginning on June 1 of the year following the year in which the plan is filed. The plan shall specifically identify the wholesale products to be procured following plan approval, and shall follow all the requirements set forth in the Public Utilities Act and all applicable State
and federal laws, statutes, rules, or regulations, as well as Commission orders. Nothing in this Section precludes consideration of contracts longer than 5 years and related forecast data. Unless specified otherwise in this Section, in the procurement plan or in the implementing tariff, any procurement occurring in accordance with this plan shall be competitively bid through a request for proposals process. Approval and implementation of the procurement plan shall be subject to review and approval by the Commission according to the provisions set forth in this Section. A procurement plan shall include each of the following components:

1. Hourly load analysis. This analysis shall include:
   - (i) multi-year historical analysis of hourly loads;
   - (ii) switching trends and competitive retail market analysis;
   - (iii) known or projected changes to future loads; and
   - (iv) growth forecasts by customer class.

2. Analysis of the impact of any demand side and renewable energy initiatives. This analysis shall include:
   - (i) the impact of demand response programs and energy efficiency programs, both current and projected; for small multi-jurisdictional utilities, the impact of demand response and energy efficiency programs approved pursuant to Section 8-408 of this
Act, both current and projected; and

(ii) supply side needs that are projected to be offset by purchases of renewable energy resources, if any.

(3) A plan for meeting the expected load requirements that will not be met through preexisting contracts. This plan shall include:

(i) definitions of the different Illinois retail customer classes for which supply is being purchased;

(ii) the proposed mix of demand-response products for which contracts will be executed during the next year. For small multi-jurisdictional electric utilities that on December 31, 2005 served fewer than 100,000 customers in Illinois, these shall be defined as demand-response products offered in an energy efficiency plan approved pursuant to Section 8-408 of this Act. The cost-effective demand-response measures shall be procured whenever the cost is lower than procuring comparable capacity products, provided that such products shall:

(A) be procured by a demand-response provider from those eligible retail customers included in the plan's electric supply service requirements;

(B) at least satisfy the demand-response requirements of the regional transmission organization market in which the utility's service
territory is located, including, but not limited
to, any applicable capacity or dispatch
requirements;

(C) provide for customers' participation in
the stream of benefits produced by the
demand-response products;

(D) provide for reimbursement by the
demand-response provider of the utility for any
costs incurred as a result of the failure of the
supplier of such products to perform its
obligations thereunder; and

(E) meet the same credit requirements as apply
to suppliers of capacity, in the applicable
regional transmission organization market;

(iii) monthly forecasted system supply
requirements, including expected minimum, maximum, and
average values for the planning period;

(iv) the proposed mix and selection of standard
wholesale products for which contracts will be
executed during the next year, separately or in
combination, to meet that portion of its load
requirements not met through pre-existing contracts,
including but not limited to monthly 5 x 16 peak period
block energy, monthly off-peak wrap energy, monthly 7 x
24 energy, annual 5 x 16 energy, annual off-peak wrap
energy, annual 7 x 24 energy, monthly capacity, annual
capacity, peak load capacity obligations, capacity purchase plan, and ancillary services;

(v) proposed term structures for each wholesale product type included in the proposed procurement plan portfolio of products; and

(vi) an assessment of the price risk, load uncertainty, and other factors that are associated with the proposed procurement plan; this assessment, to the extent possible, shall include an analysis of the following factors: contract terms, time frames for securing products or services, fuel costs, weather patterns, transmission costs, market conditions, and the governmental regulatory environment; the proposed procurement plan shall also identify alternatives for those portfolio measures that are identified as having significant price risk.

(4) Proposed procedures for balancing loads. The procurement plan shall include, for load requirements included in the procurement plan, the process for (i) hourly balancing of supply and demand and (ii) the criteria for portfolio re-balancing in the event of significant shifts in load.

(5) Renewable energy resources plan. The procurement plan shall include a renewable energy resources plan that shall ensure adequate, reliable, affordable, efficient, and environmentally sustainable renewable energy resources
at the lowest total cost over time, taking into account any benefits of price stability. The renewable energy resources plan shall include:

(i) a description of the renewable energy resources, including renewable energy credits proposed to be procured pursuant to Section 1-56 and subsection (c) of Section 1-75 of the Illinois Power Agency Act;

(ii) a planning horizon and a comparison of the projected costs and benefits of procuring renewable resources for various contract terms based on market evidence; and

(iii) an explanation of how the Illinois Power Agency plans to utilize available funds for its planned renewable energy procurement, identifying specifically the source of funds to be used, including the Illinois Power Agency Renewable Energy Resources Fund, moneys accumulated by the electric utility in respect of service to customers under hourly pricing tariffs pursuant to paragraph (5) of subsection (c) of Section 1-75 of the Illinois Power Agency Act, alternative compliance payments remitted to the electric utility pursuant to Section 16-115D of the Public Utilities Act, and any other moneys to be collected by the electric utility for procurements conducted pursuant to paragraph (1) of subsection (c) of Section 1-75 of the Illinois Power Agency Act. Available funds shall be
prioritized as follows: new long-term contracts for renewable energy resources procured from photovoltaic distribution generation resources; new long-term contracts for renewable energy resources procured from brownfield site projects or utility scale photovoltaic projects; and other one-year contracts for wind and other renewable energy resources.

(c) The procurement process set forth in Section 1-75 of the Illinois Power Agency Act and subsection (e) of this Section shall be administered by a procurement administrator and monitored by a procurement monitor.

(1) The procurement administrator shall:

   (i) design the final procurement process in accordance with Section 1-75 of the Illinois Power Agency Act and subsection (e) of this Section following Commission approval of the procurement plan;

   (ii) develop benchmarks in accordance with subsection (e)(3) to be used to evaluate bids; these benchmarks shall be submitted to the Commission for review and approval on a confidential basis prior to the procurement event;

   (iii) serve as the interface between the electric utility and suppliers;

   (iv) manage the bidder pre-qualification and registration process;

   (v) obtain the electric utilities' agreement to
the final form of all supply contracts and credit collateral agreements;

(vi) administer the request for proposals process;

(vii) have the discretion to negotiate to determine whether bidders are willing to lower the price of bids that meet the benchmarks approved by the Commission; any post-bid negotiations with bidders shall be limited to price only and shall be completed within 24 hours after opening the sealed bids and shall be conducted in a fair and unbiased manner; in conducting the negotiations, there shall be no disclosure of any information derived from proposals submitted by competing bidders; if information is disclosed to any bidder, it shall be provided to all competing bidders;

(viii) maintain confidentiality of supplier and bidding information in a manner consistent with all applicable laws, rules, regulations, and tariffs;

(ix) submit a confidential report to the Commission recommending acceptance or rejection of bids;

(x) notify the utility of contract counterparties and contract specifics; and

(xi) administer related contingency procurement events.

(2) The procurement monitor, who shall be retained by
the Commission, shall:

(i) monitor interactions among the procurement administrator, suppliers, and utility;

(ii) monitor and report to the Commission on the progress of the procurement process;

(iii) provide an independent confidential report to the Commission regarding the results of the procurement event;

(iv) assess compliance with the procurement plans approved by the Commission for each utility that on December 31, 2005 provided electric service to at least 100,000 customers in Illinois and for each small multi-jurisdictional utility that on December 31, 2005 served less than 100,000 customers in Illinois;

(v) preserve the confidentiality of supplier and bidding information in a manner consistent with all applicable laws, rules, regulations, and tariffs;

(vi) provide expert advice to the Commission and consult with the procurement administrator regarding issues related to procurement process design, rules, protocols, and policy-related matters; and

(vii) consult with the procurement administrator regarding the development and use of benchmark criteria, standard form contracts, credit policies, and bid documents.

(d) Except as provided in subsection (j), the planning
process shall be conducted as follows:

(1) Beginning in 2008, each Illinois utility procuring power pursuant to this Section shall annually provide a range of load forecasts to the Illinois Power Agency by July 15 of each year, or such other date as may be required by the Commission or Agency. The load forecasts shall cover the 5-year procurement planning period for the next procurement plan and shall include hourly data representing a high-load, low-load and expected-load scenario for the load of those eligible retail customers included in the plan's electric supply service requirements. The utility shall provide supporting data and assumptions for each of the scenarios.

(2) Beginning in 2008, the Illinois Power Agency shall prepare a procurement plan by August 15th of each year, or such other date as may be required by the Commission. The procurement plan shall identify the portfolio of demand-response and power and energy products to be procured. Cost-effective demand-response measures shall be procured as set forth in item (iii) of subsection (b) of this Section. Copies of the procurement plan shall be posted and made publicly available on the Agency's and Commission's websites, and copies shall also be provided to each affected electric utility. An affected utility shall have 30 days following the date of posting to provide comment to the Agency on the procurement plan. Other
interested entities also may comment on the procurement plan. All comments submitted to the Agency shall be specific, supported by data or other detailed analyses, and, if objecting to all or a portion of the procurement plan, accompanied by specific alternative wording or proposals. All comments shall be posted on the Agency's and Commission's websites. During this 30-day comment period, the Agency shall hold at least one public hearing within each utility's service area for the purpose of receiving public comment on the procurement plan. Within 14 days following the end of the 30-day review period, the Agency shall revise the procurement plan as necessary based on the comments received and file the procurement plan with the Commission and post the procurement plan on the websites.

(3) Within 5 days after the filing of the procurement plan, any person objecting to the procurement plan shall file an objection with the Commission. Within 10 days after the filing, the Commission shall determine whether a hearing is necessary. The Commission shall enter its order confirming or modifying the procurement plan within 90 days after the filing of the procurement plan by the Illinois Power Agency.

(4) The Commission shall approve the procurement plan, including expressly the forecast used in the procurement plan, if the Commission determines that it will ensure adequate, reliable, affordable, efficient, and
environmentally sustainable electric service at the lowest total cost over time, taking into account any benefits of price stability.

(e) The procurement process shall include each of the following components:

(1) Solicitation, pre-qualification, and registration of bidders. The procurement administrator shall disseminate information to potential bidders to promote a procurement event, notify potential bidders that the procurement administrator may enter into a post-bid price negotiation with bidders that meet the applicable benchmarks, provide supply requirements, and otherwise explain the competitive procurement process. In addition to such other publication as the procurement administrator determines is appropriate, this information shall be posted on the Illinois Power Agency's and the Commission's websites. The procurement administrator shall also administer the prequalification process, including evaluation of credit worthiness, compliance with procurement rules, and agreement to the standard form contract developed pursuant to paragraph (2) of this subsection (e). The procurement administrator shall then identify and register bidders to participate in the procurement event.

(2) Standard contract forms and credit terms and instruments. The procurement administrator, in
consultation with the utilities, the Commission, and other
interested parties and subject to Commission oversight,
shall develop and provide standard contract forms for the
supplier contracts that meet generally accepted industry
practices. Standard credit terms and instruments that meet
generally accepted industry practices shall be similarly
developed. The procurement administrator shall make
available to the Commission all written comments it
receives on the contract forms, credit terms, or
instruments. If the procurement administrator cannot reach
agreement with the applicable electric utility as to the
contract terms and conditions, the procurement
administrator must notify the Commission of any disputed
terms and the Commission shall resolve the dispute. The
terms of the contracts shall not be subject to negotiation
by winning bidders, and the bidders must agree to the terms
of the contract in advance so that winning bids are
selected solely on the basis of price.

(3) Establishment of a market-based price benchmark.
As part of the development of the procurement process, the
procurement administrator, in consultation with the
Commission staff, Agency staff, and the procurement
monitor, shall establish benchmarks for evaluating the
final prices in the contracts for each of the products that
will be procured through the procurement process. The
benchmarks shall be based on price data for similar
products for the same delivery period and same delivery
hub, or other delivery hubs after adjusting for that
difference. The price benchmarks may also be adjusted to
take into account differences between the information
reflected in the underlying data sources and the specific
products and procurement process being used to procure
power for the Illinois utilities. The benchmarks shall be
confidential but shall be provided to, and will be subject
to Commission review and approval, prior to a procurement
event.

(4) Request for proposals competitive procurement
process. The procurement administrator shall design and
issue a request for proposals to supply electricity in
accordance with each utility's procurement plan, as
approved by the Commission. The request for proposals shall
set forth a procedure for sealed, binding commitment
bidding with pay-as-bid settlement, and provision for
selection of bids on the basis of price.

(5) A plan for implementing contingencies in the event
of supplier default or failure of the procurement process
to fully meet the expected load requirement due to
insufficient supplier participation, Commission rejection
of results, or any other cause.

(i) Event of supplier default: In the event of
supplier default, the utility shall review the
contract of the defaulting supplier to determine if the
amount of supply is 200 megawatts or greater, and if there are more than 60 days remaining of the contract term. If both of these conditions are met, and the default results in termination of the contract, the utility shall immediately notify the Illinois Power Agency that a request for proposals must be issued to procure replacement power, and the procurement administrator shall run an additional procurement event. If the contracted supply of the defaulting supplier is less than 200 megawatts or there are less than 60 days remaining of the contract term, the utility shall procure power and energy from the applicable regional transmission organization market, including ancillary services, capacity, and day-ahead or real time energy, or both, for the duration of the contract term to replace the contracted supply; provided, however, that if a needed product is not available through the regional transmission organization market it shall be purchased from the wholesale market.

(ii) Failure of the procurement process to fully meet the expected load requirement: If the procurement process fails to fully meet the expected load requirement due to insufficient supplier participation or due to a Commission rejection of the procurement results, the procurement administrator, the
procurement monitor, and the Commission staff shall meet within 10 days to analyze potential causes of low supplier interest or causes for the Commission decision. If changes are identified that would likely result in increased supplier participation, or that would address concerns causing the Commission to reject the results of the prior procurement event, the procurement administrator may implement those changes and rerun the request for proposals process according to a schedule determined by those parties and consistent with Section 1-75 of the Illinois Power Agency Act and this subsection. In any event, a new request for proposals process shall be implemented by the procurement administrator within 90 days after the determination that the procurement process has failed to fully meet the expected load requirement.

(iii) In all cases where there is insufficient supply provided under contracts awarded through the procurement process to fully meet the electric utility's load requirement, the utility shall meet the load requirement by procuring power and energy from the applicable regional transmission organization market, including ancillary services, capacity, and day-ahead or real time energy or both; provided, however, that if a needed product is not available through the regional transmission organization market it shall be purchased
from the wholesale market.

(6) The procurement process described in this subsection is exempt from the requirements of the Illinois Procurement Code, pursuant to Section 20-10 of that Code.

(f) Within 2 business days after opening the sealed bids, the procurement administrator shall submit a confidential report to the Commission. The report shall contain the results of the bidding for each of the products along with the procurement administrator's recommendation for the acceptance and rejection of bids based on the price benchmark criteria and other factors observed in the process. The procurement monitor also shall submit a confidential report to the Commission within 2 business days after opening the sealed bids. The report shall contain the procurement monitor's assessment of bidder behavior in the process as well as an assessment of the procurement administrator's compliance with the procurement process and rules. The Commission shall review the confidential reports submitted by the procurement administrator and procurement monitor, and shall accept or reject the recommendations of the procurement administrator within 2 business days after receipt of the reports.

(g) Within 3 business days after the Commission decision approving the results of a procurement event, the utility shall enter into binding contractual arrangements with the winning suppliers using the standard form contracts; except that the utility shall not be required either directly or indirectly to
execute the contracts if a tariff that is consistent with subsection (l) of this Section has not been approved and placed into effect for that utility.

(h) The names of the successful bidders and the load weighted average of the winning bid prices for each contract type and for each contract term shall be made available to the public at the time of Commission approval of a procurement event. The Commission, the procurement monitor, the procurement administrator, the Illinois Power Agency, and all participants in the procurement process shall maintain the confidentiality of all other supplier and bidding information in a manner consistent with all applicable laws, rules, regulations, and tariffs. Confidential information, including the confidential reports submitted by the procurement administrator and procurement monitor pursuant to subsection (f) of this Section, shall not be made publicly available and shall not be discoverable by any party in any proceeding, absent a compelling demonstration of need, nor shall those reports be admissible in any proceeding other than one for law enforcement purposes.

(i) Within 2 business days after a Commission decision approving the results of a procurement event or such other date as may be required by the Commission from time to time, the utility shall file for informational purposes with the Commission its actual or estimated retail supply charges, as applicable, by customer supply group reflecting the costs
associated with the procurement and computed in accordance with
the tariffs filed pursuant to subsection (l) of this Section
and approved by the Commission.

(j) Within 60 days following the effective date of this
amendatory Act, each electric utility that on December 31, 2005
provided electric service to at least 100,000 customers in
Illinois shall prepare and file with the Commission an initial
procurement plan, which shall conform in all material respects
to the requirements of the procurement plan set forth in
subsection (b); provided, however, that the Illinois Power
Agency Act shall not apply to the initial procurement plan
prepared pursuant to this subsection. The initial procurement
plan shall identify the portfolio of power and energy products
to be procured and delivered for the period June 2008 through
May 2009, and shall identify the proposed procurement
administrator, who shall have the same experience and expertise
as is required of a procurement administrator hired pursuant to
Section 1-75 of the Illinois Power Agency Act. Copies of the
procurement plan shall be posted and made publicly available on
the Commission's website. The initial procurement plan may
include contracts for renewable resources that extend beyond
May 2009.

(i) Within 14 days following filing of the initial
procurement plan, any person may file a detailed objection
with the Commission contesting the procurement plan
submitted by the electric utility. All objections to the
electric utility's plan shall be specific, supported by data or other detailed analyses. The electric utility may file a response to any objections to its procurement plan within 7 days after the date objections are due to be filed. Within 7 days after the date the utility's response is due, the Commission shall determine whether a hearing is necessary. If it determines that a hearing is necessary, it shall require the hearing to be completed and issue an order on the procurement plan within 60 days after the filing of the procurement plan by the electric utility.

(ii) The order shall approve or modify the procurement plan, approve an independent procurement administrator, and approve or modify the electric utility's tariffs that are proposed with the initial procurement plan. The Commission shall approve the procurement plan if the Commission determines that it will ensure adequate, reliable, affordable, efficient, and environmentally sustainable electric service at the lowest total cost over time, taking into account any benefits of price stability.

(k) In order to promote price stability for residential and small commercial customers during the transition to competition in Illinois, and notwithstanding any other provision of this Act, each electric utility subject to this Section shall enter into one or more multi-year financial swap contracts that become effective on the effective date of this amendatory Act. These contracts may be executed with generators
and power marketers, including affiliated interests of the electric utility. These contracts shall be for a term of no more than 5 years and shall, for each respective utility or for any Illinois electric utilities that are affiliated by virtue of a common parent company and that are thereby considered a single electric utility for purposes of this subsection (k), not exceed in the aggregate 3,000 megawatts for any hour of the year. The contracts shall be financial contracts and not energy sales contracts. The contracts shall be executed as transactions under a negotiated master agreement based on the form of master agreement for financial swap contracts sponsored by the International Swaps and Derivatives Association, Inc. and shall be considered pre-existing contracts in the utilities' procurement plans for residential and small commercial customers. Costs incurred pursuant to a contract authorized by this subsection (k) shall be deemed prudently incurred and reasonable in amount and the electric utility shall be entitled to full cost recovery pursuant to the tariffs filed with the Commission.

(k-5) In order to promote price stability for residential and small commercial customers during the infrastructure investment program described in subsection (b) of Section 16-108.5 of this Act, and notwithstanding any other provision of this Act or the Illinois Power Agency Act, for each electric utility that serves more than one million retail customers in Illinois, the Illinois Power Agency shall conduct a procurement
event within 120 days after October 26, 2011 (the effective date of Public Act 97-616) and may procure contracts for energy and renewable energy credits for the period June 1, 2013 through December 31, 2017 that satisfy the requirements of this subsection (k-5), including the benchmarks described in this subsection. These contracts shall be entered into as the result of a competitive procurement event, and, to the extent that any provisions of this Section or the Illinois Power Agency Act do not conflict with this subsection (k-5), such provisions shall apply to the procurement event. The energy contracts shall be for 24 hour by 7 day supply over a term that runs from the first delivery year through December 31, 2017. For a utility that serves over 2 million customers, the energy contracts shall be multi-year with pricing escalating at 2.5% per annum. The energy contracts may be designed as financial swaps or may require physical delivery.

Within 30 days of October 26, 2011 (the effective date of Public Act 97-616), each such utility shall submit to the Agency updated load forecasts for the period June 1, 2013 through December 31, 2017. The megawatt volume of the contracts shall be based on the updated load forecasts of the minimum monthly on-peak or off-peak average load requirements shown in the forecasts, taking into account any existing energy contracts in effect as well as the expected migration of the utility's customers to alternative retail electric suppliers. The renewable energy credit volume shall be based on the number
of credits that would satisfy the requirements of subsection (c) of Section 1-75 of the Illinois Power Agency Act, subject to the rate impact caps and other provisions of subsection (c) of Section 1-75 of the Illinois Power Agency Act. The evaluation of contract bids in the competitive procurement events for energy and for renewable energy credits shall incorporate price benchmarks set collaboratively by the Agency, the procurement administrator, the staff of the Commission, and the procurement monitor. If the contracts are swap contracts, then they shall be executed as transactions under a negotiated master agreement based on the form of master agreement for financial swap contracts sponsored by the International Swaps and Derivatives Association, Inc. Costs incurred pursuant to a contract authorized by this subsection (k-5) shall be deemed prudently incurred and reasonable in amount and the electric utility shall be entitled to full cost recovery pursuant to the tariffs filed with the Commission.

The cost of administering the procurement event described in this subsection (k-5) shall be paid by the winning supplier or suppliers to the procurement administrator through a supplier fee. In the event that there is no winning supplier for a particular utility, such utility will pay the procurement administrator for the costs associated with the procurement event, and those costs shall not be a recoverable expense. Nothing in this subsection (k-5) is intended to alter the recovery of costs for any other procurement event.
(l) An electric utility shall recover its costs incurred under this Section, including, but not limited to, the costs of procuring power and energy demand-response resources under this Section. The utility shall file with the initial procurement plan its proposed tariffs through which its costs of procuring power that are incurred pursuant to a Commission-approved procurement plan and those other costs identified in this subsection (l), will be recovered. The tariffs shall include a formula rate or charge designed to pass through both the costs incurred by the utility in procuring a supply of electric power and energy for the applicable customer classes with no mark-up or return on the price paid by the utility for that supply, plus any just and reasonable costs that the utility incurs in arranging and providing for the supply of electric power and energy. The formula rate or charge shall also contain provisions that ensure that its application does not result in over or under recovery due to changes in customer usage and demand patterns, and that provide for the correction, on at least an annual basis, of any accounting errors that may occur. A utility shall recover through the tariff all reasonable costs incurred to implement or comply with any procurement plan that is developed and put into effect pursuant to Section 1-75 of the Illinois Power Agency Act and this Section, including any fees assessed by the Illinois Power Agency, costs associated with load balancing, and contingency plan costs. The electric utility shall also recover its full
costs of procuring electric supply for which it contracted before the effective date of this Section in conjunction with the provision of full requirements service under fixed-price bundled service tariffs subsequent to December 31, 2006. All such costs shall be deemed to have been prudently incurred. The pass-through tariffs that are filed and approved pursuant to this Section shall not be subject to review under, or in any way limited by, Section 16-111(i) of this Act. All of the costs incurred by the electric utility associated with the purchase of zero emission credits in accordance with subsection (d-5) of Section 1-75 of the Illinois Power Agency Act and, beginning June 1, 2018, all of the costs incurred by the electric utility associated with the purchase of renewable energy resources in accordance with subsection (c) of Section 1-75 of the Illinois Power Agency Act, shall be recovered through the electric utility's tariffed charges applicable to all of the retail customers in its service territory, as specified in subsection (k) of Section 16-108 of this Act, and shall not be recovered through the electric utility's tariffed charges for electric power and energy supply to its eligible retail customers.

(m) The Commission has the authority to adopt rules to carry out the provisions of this Section. For the public interest, safety, and welfare, the Commission also has authority to adopt rules to carry out the provisions of this Section on an emergency basis immediately following the effective date of this amendatory Act.
(n) Notwithstanding any other provision of this Act, any affiliated electric utilities that submit a single procurement plan covering their combined needs may procure for those combined needs in conjunction with that plan, and may enter jointly into power supply contracts, purchases, and other procurement arrangements, and allocate capacity and energy and cost responsibility therefor among themselves in proportion to their requirements.

(o) On or before June 1 of each year, the Commission shall hold an informal hearing for the purpose of receiving comments on the prior year’s procurement process and any recommendations for change.

(p) An electric utility subject to this Section may propose to invest, lease, own, or operate an electric generation facility as part of its procurement plan, provided the utility demonstrates that such facility is the least-cost option to provide electric service to those eligible retail customers included in the plan’s electric supply service requirements. If the facility is shown to be the least-cost option and is included in a procurement plan prepared in accordance with Section 1-75 of the Illinois Power Agency Act and this Section, then the electric utility shall make a filing pursuant to Section 8-406 of this Act, and may request of the Commission any statutory relief required thereunder. If the Commission grants all of the necessary approvals for the proposed facility, such supply shall thereafter be considered as a
pre-existing contract under subsection (b) of this Section. The Commission shall in any order approving a proposal under this subsection specify how the utility will recover the prudently incurred costs of investing in, leasing, owning, or operating such generation facility through just and reasonable rates charged to those eligible retail customers included in the plan's electric supply service requirements. Cost recovery for facilities included in the utility's procurement plan pursuant to this subsection shall not be subject to review under or in any way limited by the provisions of Section 16-111(i) of this Act. Nothing in this Section is intended to prohibit a utility from filing for a fuel adjustment clause as is otherwise permitted under Section 9-220 of this Act.

(220 ILCS 5/16-111.5B)

Sec. 16-111.5B. Provisions relating to energy efficiency procurement.

(a) Procurement Beginning in 2012, procurement plans prepared and filed pursuant to Section 16-111.5 of this Act during the years 2012 through 2015 shall be subject to the following additional requirements:

(1) The analysis included pursuant to paragraph (2) of subsection (b) of Section 16-111.5 shall also include the impact of energy efficiency building codes or appliance
standards, both current and projected.

(2) The procurement plan components described in subsection (b) of Section 16-111.5 shall also include an assessment of opportunities to expand the programs promoting energy efficiency measures that have been offered under plans approved pursuant to Section 8-103 of this Act or to implement additional cost-effective energy efficiency programs or measures.

(3) In addition to the information provided pursuant to paragraph (1) of subsection (d) of Section 16-111.5 of this Act, each Illinois utility procuring power pursuant to that Section shall annually provide to the Illinois Power Agency by July 15 of each year, or such other date as may be required by the Commission or Agency, an assessment of cost-effective energy efficiency programs or measures that could be included in the procurement plan. The assessment shall include the following:

(A) A comprehensive energy efficiency potential study for the utility's service territory that was completed within the past 3 years.

(B) Beginning in 2014, the most recent analysis submitted pursuant to Section 8-103A of this Act and approved by the Commission under subsection (f) of Section 8-103 of this Act.

(C) Identification of new or expanded cost-effective energy efficiency programs or measures.
that are incremental to those included in energy efficiency and demand-response plans approved by the Commission pursuant to Section 8-103 of this Act and that would be offered to all retail customers whose electric service has not been declared competitive under Section 16-113 of this Act and who are eligible to purchase power and energy from the utility under fixed-price bundled service tariffs, regardless of whether such customers actually do purchase such power and energy from the utility.

(D) Analysis showing that the new or expanded cost-effective energy efficiency programs or measures would lead to a reduction in the overall cost of electric service.

(E) Analysis of how the cost of procuring additional cost-effective energy efficiency measures compares over the life of the measures to the prevailing cost of comparable supply.

(F) An energy savings goal, expressed in megawatt-hours, for the year in which the measures will be implemented.

(G) For each expanded or new program, the estimated amount that the program may reduce the agency's need to procure supply.

In preparing such assessments, a utility shall conduct an annual solicitation process for purposes of requesting
proposals from third-party vendors, the results of which shall be provided to the Agency as part of the assessment, including documentation of all bids received. The utility shall develop requests for proposals consistent with the manner in which it develops requests for proposals under plans approved pursuant to Section 8-103 of this Act, which considers input from the Agency and interested stakeholders.

(4) The Illinois Power Agency shall include in the procurement plan prepared pursuant to paragraph (2) of subsection (d) of Section 16-111.5 of this Act energy efficiency programs and measures it determines are cost-effective and the associated annual energy savings goal included in the annual solicitation process and assessment submitted pursuant to paragraph (3) of this subsection (a).

(5) Pursuant to paragraph (4) of subsection (d) of Section 16-111.5 of this Act, the Commission shall also approve the energy efficiency programs and measures included in the procurement plan, including the annual energy savings goal, if the Commission determines they fully capture the potential for all achievable cost-effective savings, to the extent practicable, and otherwise satisfy the requirements of Section 8-103 of this Act.

In the event the Commission approves the procurement of
additional energy efficiency, it shall reduce the amount of power to be procured under the procurement plan to reflect the additional energy efficiency and shall direct the utility to undertake the procurement of such energy efficiency, which shall not be subject to the requirements of subsection (e) of Section 16-111.5 of this Act. The utility shall consider input from the Agency and interested stakeholders on the procurement and administration process. The requirements set forth in paragraphs (1) through (5) of this subsection (a) shall terminate after the filing of the procurement plan in 2015, and no energy efficiency shall be procured by the Agency thereafter. Energy efficiency programs approved previously pursuant to this Section shall terminate no later than December 31, 2017.

(6) An electric utility shall recover its costs incurred under this Section related to the implementation of energy efficiency programs and measures approved by the Commission in its order approving the procurement plan under Section 16-111.5 of this Act, including, but not limited to, all costs associated with complying with this Section and all start-up and administrative costs and the costs for any evaluation, measurement, and verification of the measures, from all retail customers whose electric service has not been declared competitive under Section 16-113 of this Act and who are eligible to purchase power
and energy from the utility under fixed-price bundled service tariffs, regardless of whether such customers actually do purchase such power and energy from the utility through the automatic adjustment clause tariff established pursuant to Section 8-103 of this Act, provided, however, that the limitations described in subsection (d) of that Section shall not apply to the costs incurred pursuant to this Section or Section 16-111.7 of this Act.

(b) For purposes of this Section, the term "energy efficiency" shall have the meaning set forth in Section 1-10 of the Illinois Power Agency Act, and the term "cost-effective" shall have the meaning set forth in subsection (a) of Section 8-103 of this Act.

(c) The changes to this Section made by this amendatory Act of the 99th General Assembly shall not interfere with existing contracts executed pursuant to a Commission order entered under this Section.

(Source: P.A. 97-616, eff. 10-26-11; 97-824, eff. 7-18-12.)

(220 ILCS 5/16-111.7)

Sec. 16-111.7. On-bill financing program; electric utilities.

(a) The Illinois General Assembly finds that Illinois homes and businesses have the potential to save energy through conservation and cost-effective energy efficiency measures. Programs created pursuant to this Section will allow utility
customers to purchase cost-effective energy efficiency measures, including measures set forth in a Commission-approved energy efficiency and demand-response plan under Section 8-103 or 8-103B of this Act, with no required initial upfront payment, and to pay the cost of those products and services over time on their utility bill.

(b) Notwithstanding any other provision of this Act, an electric utility serving more than 100,000 customers on January 1, 2009 shall offer a Commission-approved on-bill financing program ("program") that allows its eligible retail customers, as that term is defined in Section 16-111.5 of this Act, who own a residential single family home, duplex, or other residential building with 4 or less units, or condominium at which the electric service is being provided (i) to borrow funds from a third party lender in order to purchase electric energy efficiency measures approved under the program for installation in such home or condominium without any required upfront payment and (ii) to pay back such funds over time through the electric utility's bill. Based upon the process described in subsection (b-5) of this Section, small commercial customers who own the premises at which electric service is being provided may be included in such program. After receiving a request from an electric utility for approval of a proposed program and tariffs pursuant to this Section, the Commission shall render its decision within 120 days. If no decision is rendered within 120 days, then the request shall be deemed to
be approved.

Beginning no later than December 31, 2013, an electric utility subject to this subsection (b) shall also offer its program to eligible retail customers that own multifamily residential or mixed-use buildings with no more than 50 residential units, provided, however, that such customers must either be a residential customer or small commercial customer and may not use the program in such a way that repayment of the cost of energy efficiency measures is made through tenants' utility bills. An electric utility may impose a per site loan limit not to exceed $150,000. The program, and loans issued thereunder, shall only be offered to customers of the utility that meet the requirements of this Section and that also have an electric service account at the premises where the energy efficiency measures being financed shall be installed.

Beginning no later than 2 years after the effective date of this amendatory Act of the 99th General Assembly, the 50 residential unit limitation described in this paragraph shall no longer apply, and the utility shall replace the per site loan limit of $150,000 with a loan limit that correlates to a maximum monthly payment that does not exceed 50% of the customer's average utility bill over the prior 12-month period.

Beginning no later than 2 years after the effective date of this amendatory Act of the 99th General Assembly, an electric utility subject to this subsection (b) shall also offer its program to eligible retail customers that are Unit Owners'
Associations, as defined in subsection (o) of Section 2 of the Condominium Property Act, or Master Associations, as defined in subsection (u) of the Condominium Property Act. However, such customers must either be residential customers or small commercial customers and may not use the program in such a way that repayment of the cost of energy efficiency measures is made through unit owners' utility bills. The program and loans issued under the program shall only be offered to customers of the utility that meet the requirements of this Section and that also have an electric service account at the premises where the energy efficiency measures being financed shall be installed.

For purposes of this Section, "small commercial customer" means, for an electric utility serving more than 3,000,000 retail customers, those customers having peak demand of less than 100 kilowatts, and, for an electric utility serving less than 3,000,000 retail customers, those customers having peak demand of less than 150 kilowatts; provided, however, that in the event the Commission, after the effective date of this amendatory Act of the 98th General Assembly, approves changes to a utility's tariffs that reflects new or revised demand criteria for the utility's customer rate classifications, then the utility may file a petition with the Commission to revise the applicable definition of a small commercial customer to reflect the new or revised demand criteria for the purposes of this Section. After notice and hearing, the Commission shall enter an order approving, or approving with modification, the
revised definition within 60 days after the utility files the petition.

(b-5) Within 30 days after the effective date of this amendatory Act of the 96th General Assembly, the Commission shall convene a workshop process during which interested participants may discuss issues related to the program, including program design, eligible electric energy efficiency measures, vendor qualifications, and a methodology for ensuring ongoing compliance with such qualifications, financing, sample documents such as request for proposals, contracts and agreements, dispute resolution, pre-installment and post-installment verification, and evaluation. The workshop process shall be completed within 150 days after the effective date of this amendatory Act of the 96th General Assembly.

(c) Not later than 60 days following completion of the workshop process described in subsection (b-5) of this Section, each electric utility subject to subsection (b) of this Section shall submit a proposed program to the Commission that contains the following components:

(1) A list of recommended electric energy efficiency measures that will be eligible for on-bill financing. An eligible electric energy efficiency measure ("measure") shall be a product or service for which one or more of the following is true:

   (A) (blank);
(B) the projected electricity savings (determined by rates in effect at the time of purchase) are sufficient to cover the costs of implementing the measures, including finance charges and any program fees not recovered pursuant to subsection (f) of this Section; or

(C) the product or service is included in a Commission-approved energy efficiency and demand-response plan under Section 8-103 or 8-103B of this Act.

(1.5) Beginning no later than 2 years after the effective date of this amendatory Act of the 99th General Assembly, an eligible electric energy efficiency measure (measure) shall be a product or service that qualifies under subparagraph (B) or (C) of paragraph (1) of this subsection (c) or for which one or more of the following is true:

(A) a building energy assessment, performed by an energy auditor who is certified by the Building Performance Institute or who holds a similar certification, has recommended the product or service as likely to be cost effective over the course of its installed life for the building in which the measure is to be installed; or

(B) the product or service is necessary to safely or correctly install to code or industry standard an
efficiency measure, including, but not limited to, installation work; changes needed to plumbing or electrical connections; upgrades to wiring or fixtures; removal of hazardous materials; correction of leaks; changes to thermostats, controls, or similar devices; and changes to venting or exhaust necessitated by the measure. However, the costs of the product or service described in this subparagraph (B) shall not exceed 25% of the total cost of installing the measure.

(2) The electric utility shall issue a request for proposals ("RFP") to lenders for purposes of providing financing to participants to pay for approved measures. The RFP criteria shall include, but not be limited to, the interest rate, origination fees, and credit terms. The utility shall select the winning bidders based on its evaluation of these criteria, with a preference for those bids containing the rates, fees, and terms most favorable to participants;

(3) The utility shall work with the lenders selected pursuant to the RFP process, and with vendors, to establish the terms and processes pursuant to which a participant can purchase eligible electric energy efficiency measures using the financing obtained from the lender. The vendor shall explain and offer the approved financing packaging to those customers identified in subsection (b) of this
Section and shall assist customers in applying for financing. As part of the process, vendors shall also provide to participants information about any other incentives that may be available for the measures.

(4) The lender shall conduct credit checks or undertake other appropriate measures to limit credit risk, and shall review and approve or deny financing applications submitted by customers identified in subsection (b) of this Section. Following the lender's approval of financing and the participant's purchase of the measure or measures, the lender shall forward payment information to the electric utility, and the utility shall add as a separate line item on the participant's utility bill a charge showing the amount due under the program each month.

(5) A loan issued to a participant pursuant to the program shall be the sole responsibility of the participant, and any dispute that may arise concerning the loan's terms, conditions, or charges shall be resolved between the participant and lender. Upon transfer of the property title for the premises at which the participant receives electric service from the utility or the participant's request to terminate service at such premises, the participant shall pay in full its electric utility bill, including all amounts due under the program, provided that this obligation may be modified as provided in subsection (g) of this Section. Amounts due under the
program shall be deemed amounts owed for residential and, as appropriate, small commercial electric service.

(6) The electric utility shall remit payment in full to the lender each month on behalf of the participant. In the event a participant defaults on payment of its electric utility bill, the electric utility shall continue to remit all payments due under the program to the lender, and the utility shall be entitled to recover all costs related to a participant's nonpayment through the automatic adjustment clause tariff established pursuant to Section 16-111.8 of this Act. In addition, the electric utility shall retain a security interest in the measure or measures purchased under the program, and the utility retains its right to disconnect a participant that defaults on the payment of its utility bill.

(7) The total outstanding amount financed under the program in this subsection and subsection (c-5) of this Section shall not exceed $2.5 million for an electric utility or electric utilities under a single holding company, provided that the electric utility or electric utilities may petition the Commission for an increase in such amount. Beginning after the effective date of this amendatory Act of the 99th General Assembly, the total maximum outstanding amount financed under the program in this subsection and subsections (c-5) and (c-10) of this Section shall increase by $2,500,000 per year until such
time as the total maximum outstanding amount financed reaches $20,000,000.

(c-5) Within 120 days after the effective date of this amendatory Act of the 98th General Assembly, each electric utility subject to the requirements of this Section shall submit an informational filing to the Commission that describes its plan for implementing the provisions of this amendatory Act of the 98th General Assembly on or before December 31, 2013. Such filing shall also describe how the electric utility shall coordinate its program with any gas utility or utilities that provide gas service to buildings within the electric utility's service territory so that it is practical and feasible for the owner of a multifamily building to make a single application to access loans for both gas and electric energy efficiency measures in any individual building.

(c-10) No later than 365 days after the effective date of this amendatory Act of the 99th General Assembly, each electric utility subject to the requirements of this Section shall submit an informational filing to the Commission that describes its plan for implementing the provisions of this amendatory Act of the 99th General Assembly that were incorporated into this Section. Such filing shall also include the criteria to be used by the program for determining if measures to be financed are eligible electric energy efficiency measures, as defined by paragraph (1.5) of subsection (c) of this Section.

(d) A program approved by the Commission shall also include
the following criteria and guidelines for such program:

(1) guidelines for financing of measures installed under a program, including, but not limited to, RFP criteria and limits on both individual loan amounts and the duration of the loans;

(2) criteria and standards for identifying and approving measures;

(3) qualifications of vendors that will market or install measures, as well as a methodology for ensuring ongoing compliance with such qualifications;

(4) sample contracts and agreements necessary to implement the measures and program; and

(5) the types of data and information that utilities and vendors participating in the program shall collect for purposes of preparing the reports required under subsection (g) of this Section.

(e) The proposed program submitted by each electric utility shall be consistent with the provisions of this Section that define operational, financial and billing arrangements between and among program participants, vendors, lenders, and the electric utility.

(f) An electric utility shall recover all of the prudently incurred costs of offering a program approved by the Commission pursuant to this Section, including, but not limited to, all start-up and administrative costs and the costs for program evaluation. All prudently incurred costs under this Section
shall be recovered from the residential and small commercial
etail customer classes eligible to participate in the program
through the automatic adjustment clause tariff established
pursuant to Section 8-103 or 8-103B of this Act.

(g) An independent evaluation of a program shall be
conducted after 3 years of the program's operation. The
electric utility shall retain an independent evaluator who
shall evaluate the effects of the measures installed under the
program and the overall operation of the program, including,
but not limited to, customer eligibility criteria and whether
the payment obligation for permanent electric energy
efficiency measures that will continue to provide benefits of
energy savings should attach to the meter location. As part of
the evaluation process, the evaluator shall also solicit
feedback from participants and interested stakeholders. The
evaluator shall issue a report to the Commission on its
findings no later than 4 years after the date on which the
program commenced, and the Commission shall issue a report to
the Governor and General Assembly including a summary of the
information described in this Section as well as its
recommendations as to whether the program should be
discontinued, continued with modification or modifications or
continued without modification, provided that any recommended
modifications shall only apply prospectively and to measures
not yet installed or financed.

(h) An electric utility offering a Commission-approved
program pursuant to this Section shall not be required to comply with any other statute, order, rule, or regulation of this State that may relate to the offering of such program, provided that nothing in this Section is intended to limit the electric utility's obligation to comply with this Act and the Commission's orders, rules, and regulations, including Part 280 of Title 83 of the Illinois Administrative Code.

(i) The source of a utility customer's electric supply shall not disqualify a customer from participation in the utility's on-bill financing program. Customers of alternative retail electric suppliers may participate in the program under the same terms and conditions applicable to the utility's supply customers.

(220 ILCS 5/16-115D)

Sec. 16-115D. Renewable portfolio standard for alternative retail electric suppliers and electric utilities operating outside their service territories.

(a) An alternative retail electric supplier shall be responsible for procuring cost-effective renewable energy resources as required under item (5) of subsection (d) of Section 16-115 of this Act as outlined herein:

(1) The definition of renewable energy resources contained in Section 1-10 of the Illinois Power Agency Act applies to all renewable energy resources required to be
procured by alternative retail electric suppliers.

(2) Through May 31, 2018, the quantity of renewable energy resources shall be measured as a percentage of the actual amount of metered electricity (megawatt-hours) delivered by the alternative retail electric supplier to Illinois retail customers during the 12-month period June 1 through May 31, commencing June 1, 2009, and the comparable 12-month period in each year thereafter except as provided in item (6) of this subsection (a). Beginning with the planning year commencing June 1, 2018 and each year thereafter, the quantity of renewable energy resources shall be measured as the uncovered portion of the actual amount of metered electricity (megawatt-hours) delivered by the alternative retail electric supplier during the 12-month period to Illinois retail customers whose electric service has been declared competitive pursuant to Section 16-113 of the Public Utilities Act. For purposes of this Section, "uncovered portion" means the percentage difference between 100% minus the applicable portion determined by paragraph (1) of subsection (c) of Section 1-75 of the Illinois Power Agency Act.

(3) Through May 31, 2018, the quantity of renewable energy resources shall be in amounts at least equal to the annual percentages set forth in item (1) of subsection (c) of Section 1-75 of the Illinois Power Agency Act. At least 60% of the renewable energy resources procured pursuant to
items (1) and through (3) of subsection (b) of this Section shall come from wind generation and, starting June 1, 2015, at least 6% of the renewable energy resources procured pursuant to items (1) and through (3) of subsection (b) of this Section shall come from solar photovoltaics. If, in any given year, an alternative retail electric supplier does not purchase at least these levels of renewable energy resources, then the alternative retail electric supplier shall make alternative compliance payments, as described in subsection (d) of this Section.

(3.5) Beginning with the planning year commencing June 1, 2018, the quantity of renewable energy resources shall be at least 14.5% and increase by 1.5% each year thereafter to at least 25% by June 1, 2025. At least 60% of the renewable energy resources procured pursuant to this paragraph (3.5) shall come from wind generation.

(4) The quantity and source of renewable energy resources shall be independently verified through the PJM Environmental Information System Generation Attribute Tracking System (PJM-GATS) or the Midwest Renewable Energy Tracking System (M-RETS), which shall document the location of generation, resource type, month, and year of generation for all qualifying renewable energy resources that an alternative retail electric supplier uses to comply with this Section. No later than June 1, 2009, the Illinois Power Agency shall provide PJM-GATS, M-RETS, and
alternative retail electric suppliers with all information necessary to identify resources located in Illinois, within states that adjoin Illinois or within portions of the PJM and MISO footprint in the United States that qualify under the definition of renewable energy resources in Section 1-10 of the Illinois Power Agency Act for compliance with this Section 16-115D. Alternative retail electric suppliers shall not be subject to the requirements in item (3) of subsection (c) of Section 1-75 of the Illinois Power Agency Act.

(5) All renewable energy credits used to comply with this Section shall be permanently retired.

(6) The required procurement of renewable energy resources by an alternative retail electric supplier shall apply to all metered electricity delivered to Illinois retail customers by the alternative retail electric supplier pursuant to contracts executed or extended after March 15, 2009.

(b) Compliance obligations.

(1) Through May 31, 2018, an alternative retail electric supplier shall comply with the renewable energy portfolio standards by making an alternative compliance payment, as described in subsection (d) of this Section, to cover at least one-half of the alternative retail electric supplier's compliance obligation for the period prior to May 31, 2018.
(2) Beginning on June 1, 2018, an alternative retail electric supplier need not make any alternative compliance payment to meet any portion of its compliance obligation, as set forth in paragraph (3.5) of subsection (a) of this Section, with respect to its metered electricity supplied to its Illinois retail customers that, on January 1, 2015, had their electric service declared competitive pursuant to Section 16-113 of this Act.

(3) An alternative retail electric supplier shall use and any one or combination of the following means to cover the remainder of the alternative retail electric supplier's compliance obligation, as set forth in paragraphs (3) and (3.5) of subsection (a) of this Section, not covered by an alternative compliance payment made under paragraphs (1) and (2) of this subsection (b):

   (A) Generating electricity using renewable energy resources identified pursuant to item (4) of subsection (a) of this Section.
   
   (B) Purchasing electricity generated using renewable energy resources identified pursuant to item (4) of subsection (a) of this Section through an energy contract.
   
   (C) Purchasing renewable energy credits from renewable energy resources identified pursuant to item (4) of subsection (a) of this Section.
   
   (D) Making an alternative compliance payment
as described in subsection (d) of this Section.

(c) Use of renewable energy credits.

(1) Renewable energy credits that are not used by an alternative retail electric supplier to comply with a renewable portfolio standard in a compliance year may be banked and carried forward up to 2 12-month compliance periods after the compliance period in which the credit was generated for the purpose of complying with a renewable portfolio standard in those 2 subsequent compliance periods. For the 2009-2010 and 2010-2011 compliance periods, an alternative retail electric supplier may use renewable credits generated after December 31, 2008 and before June 1, 2009 to comply with this Section.

(2) An alternative retail electric supplier is responsible for demonstrating that a renewable energy credit used to comply with a renewable portfolio standard is derived from a renewable energy resource and that the alternative retail electric supplier has not used, traded, sold, or otherwise transferred the credit.

(3) The same renewable energy credit may be used by an alternative retail electric supplier to comply with a federal renewable portfolio standard and a renewable portfolio standard established under this Act. An alternative retail electric supplier that uses a renewable energy credit to comply with a renewable portfolio standard imposed by any other state may not use the same credit to
comply with a renewable portfolio standard established under this Act.

(d) Alternative compliance payments.

   (1) The Commission shall establish and post on its website, within 5 business days after entering an order approving a procurement plan pursuant to Section 1-75 of the Illinois Power Agency Act, maximum alternative compliance payment rates, expressed on a per kilowatt-hour basis, that will be applicable in the first compliance period following the plan approval. A separate maximum alternative compliance payment rate shall be established for the service territory of each electric utility that is subject to subsection (c) of Section 1-75 of the Illinois Power Agency Act. Each maximum alternative compliance payment rate shall be equal to the maximum allowable annual estimated average net increase due to the costs of the utility's purchase of renewable energy resources included in the amounts paid by eligible retail customers in connection with electric service, as described in item (2) of subsection (c) of Section 1-75 of the Illinois Power Agency Act for the compliance period, and as established in the approved procurement plan. Following each procurement event through which renewable energy resources are purchased for one or more of these utilities for the compliance period, the Commission shall establish and post on its website estimates of the alternative compliance
payment rates, expressed on a per kilowatt-hour basis, that shall apply for that compliance period. Posting of the estimates shall occur no later than 10 business days following the procurement event, however, the Commission shall not be required to establish and post such estimates more often than once per calendar month. By July 1 of each year, the Commission shall establish and post on its website the actual alternative compliance payment rates for the preceding compliance year. The Commission shall make available to alternative retail electric suppliers subject to this Section the average cost and quantity for the compliance year, the estimated average cost for each subsequent compliance year, and the anticipated quantity for each subsequent compliance year for the duration of such executed renewable energy contracts which will impact the alternative compliance payment. For compliance years beginning prior to June 1, 2014, each alternative compliance payment rate shall be equal to the total amount of dollars that the utility contracted to spend on renewable resources, excepting the additional incremental cost attributable to solar resources, for the compliance period divided by the forecasted load of eligible retail customers, at the customers' meters, as previously established in the Commission-approved procurement plan for that compliance year. For compliance years commencing on or after June 1, 2014, each alternative compliance
payment rate shall be equal to the total amount of dollars that the utility contracted to spend on all renewable resources for the compliance period divided by the forecasted load of eligible retail customers for which the utility is procuring renewable energy resources in a given planning year, at the customers' meters, as previously established in the Commission-approved procurement plan for that compliance year. The actual alternative compliance payment rates may not exceed the maximum alternative compliance payment rates established for the compliance period. For purposes of this subsection (d), the term "eligible retail customers" has the same meaning as found in Section 16-111.5 of this Act.

(2) In any given compliance year, an alternative retail electric supplier may elect to use alternative compliance payments to comply with all or a part of the applicable renewable portfolio standard. In the event that an alternative retail electric supplier elects to make alternative compliance payments to comply with all or a part of the applicable renewable portfolio standard, such payments shall be made by September 1, 2010 for the period of June 1, 2009 to May 1, 2010 and by September 1 of each year thereafter for the subsequent compliance period, in the manner and form as determined by the Commission. Any election by an alternative retail electric supplier to use alternative compliance payments is subject to review by the
Commission under subsection (e) of this Section.

(3) An alternative retail electric supplier's alternative compliance payments shall be computed separately for each electric utility's service territory within which the alternative retail electric supplier provided retail service during the compliance period, provided that the electric utility was subject to subsection (c) of Section 1-75 of the Illinois Power Agency Act. For each service territory, the alternative retail electric supplier's alternative compliance payment shall be equal to (i) the actual alternative compliance payment rate established in item (1) of this subsection (d), multiplied by (ii) the actual amount of metered electricity delivered by the alternative retail electric supplier to retail customers for which the supplier has a compliance obligation within the service territory during the compliance period, multiplied by (iii) the result of one minus the ratios of the quantity of renewable energy resources used by the alternative retail electric supplier to comply with the requirements of this Section within the service territory to the product of the percentage of renewable energy resources required under item (3) of subsection (a) of this Section and the actual amount of metered electricity delivered by the alternative retail electric supplier to retail customers for which the supplier has a compliance obligation within the service territory.
territory during the compliance period.

(4) Through May 31, 2018, all alternative compliance payments by alternative retail electric suppliers shall be deposited in the Illinois Power Agency Renewable Energy Resources Fund and used to purchase renewable energy credits, in accordance with Section 1-56 of the Illinois Power Agency Act. Beginning April 1, 2012 and by April 1 of each year thereafter, the Illinois Power Agency shall submit an annual report to the General Assembly, the Commission, and alternative retail electric suppliers that shall include, but not be limited to:

(A) the total amount of alternative compliance payments received in aggregate from alternative retail electric suppliers by planning year for all previous planning years in which the alternative compliance payment was in effect;

(B) the amount of those payments utilized to purchased renewable energy credits itemized by the date of each procurement in which the payments were utilized; and

(C) the unused and remaining balance in the Agency Renewable Energy Resources Fund attributable to those payments.

(4.5) Beginning with the planning year commencing June 1, 2018, all alternative compliance payments by alternative retail electric suppliers shall be remitted to
the applicable electric utility. To facilitate this remittance, each electric utility shall file a tariff with the Commission no later than 30 days following the effective date of this amendatory Act of the 99th General Assembly, which the Commission shall approve, after notice and hearing, no later than 45 days after its filing. The Illinois Power Agency shall use such payments to increase the amount of renewable energy resources otherwise to be procured under subsection (c) of Section 1-75 of the Illinois Power Agency Act.

(5) The Commission, in consultation with the Illinois Power Agency, shall establish a process or proceeding to consider the impact of a federal renewable portfolio standard, if enacted, on the operation of the alternative compliance mechanism, which shall include, but not be limited to, developing, to the extent permitted by the applicable federal statute, an appropriate methodology to apportion renewable energy credits retired as a result of alternative compliance payments made in accordance with this Section. The Commission shall commence any such process or proceeding within 35 days after enactment of a federal renewable portfolio standard.

(e) Each alternative retail electric supplier shall, by September 1, 2010 and by September 1 of each year thereafter, prepare and submit to the Commission a report, in a format to be specified by the Commission on or before December 31, 2009,
that provides information certifying:

(1) compliance by the alternative retail electric supplier with this Section, including copies of all PJM-GATS and M-RETS reports;

(2) and documentation relating to banking and retiring renewable energy credits;

(3) the type and the amounts of renewable energy credits the alternative retail electric supplier is using to satisfy the alternative retail electric supplier's compliance obligation for the applicable compliance year;

(4) the states in which the facilities supplying the renewable energy credits purchased by the alternative retail electric supplier to satisfy the alternative retail electric supplier's compliance obligation for the applicable compliance year are located;

(5) the vintage of all renewable energy credits purchased by the alternative retail electric supplier;

(6) the percent, if any, of the alternative retail electric supplier's compliance obligation that it intends to meet through making an alternative compliance payment pursuant to subsection (b) of this Section; and

(7) and any other information that the Commission determines necessary to ensure compliance with this Section.

However, the information required by paragraphs (3) through (6) of this subsection (e) shall not be required to be
included in reports submitted on or before September 1, 2018.

An alternative retail electric supplier may file commercially or financially sensitive information or trade secrets with the Commission as provided under the rules of the Commission. To be filed confidentially, the information shall be accompanied by an affidavit that sets forth both the reasons for the confidentiality and a public synopsis of the information.

The Commission shall provide an analysis of the information provided by the alternative retail electric suppliers pursuant to this subsection (e) and a description of the manner in which alternative retail electric suppliers have met their obligations. The information in the Commission's annual report shall be presented in a way that protects the confidentiality of the information provided by the alternative retail electric suppliers. The Commission's annual report shall be posted on its website and cover the period from June 1, 2018 through May 31, 2019 and each annual period thereafter.

(f) The Commission may initiate a contested case to review allegations that the alternative retail electric supplier has violated this Section, including an order issued or rule promulgated under this Section. In any such proceeding, the alternative retail electric supplier shall have the burden of proof. If the Commission finds, after notice and hearing, that an alternative retail electric supplier has violated this Section, then the Commission shall issue an order requiring the
alternative retail electric supplier to:

(1) immediately comply with this Section; and

(2) if the violation involves a failure to procure the requisite quantity of renewable energy resources or pay the applicable alternative compliance payment by the annual deadline, the Commission shall require the alternative retail electric supplier to double the applicable alternative compliance payment that would otherwise be required to bring the alternative retail electric supplier into compliance with this Section.

If an alternative retail electric supplier fails to comply with the renewable energy resource portfolio requirement in this Section more than once in a 5-year period, then the Commission shall revoke the alternative electric supplier's certificate of service authority. The Commission shall not accept an application for a certificate of service authority from an alternative retail electric supplier that has lost certification under this subsection (f), or any corporate affiliate thereof, for at least one year after the date of revocation.

(g) All of the provisions of this Section apply to electric utilities operating outside their service area except under item (2) of subsection (a) of this Section the quantity of renewable energy resources shall be measured as a percentage of the actual amount of electricity (megawatt-hours) supplied in the State outside of the utility's service territory during the
12-month period June 1 through May 31, commencing June 1, 2009, and the comparable 12-month period in each year thereafter except as provided in item (6) of subsection (a) of this Section.

If any such utility fails to procure the requisite quantity of renewable energy resources by the annual deadline, then the Commission shall require the utility to double the alternative compliance payment that would otherwise be required to bring the utility into compliance with this Section.

If any such utility fails to comply with the renewable energy resource portfolio requirement in this Section more than once in a 5-year period, then the Commission shall order the utility to cease all sales outside of the utility's service territory for a period of at least one year.

(h) The provisions of this Section and the provisions of subsection (d) of Section 16-115 of this Act relating to procurement of renewable energy resources shall not apply to an alternative retail electric supplier that operates a combined heat and power system in this State or that has a corporate affiliate that operates such a combined heat and power system in this State that supplies electricity primarily to or for the benefit of: (i) facilities owned by the supplier, its subsidiary, or other corporate affiliate; (ii) facilities electrically integrated with the electrical system of facilities owned by the supplier, its subsidiary, or other corporate affiliate; or (iii) facilities that are adjacent to
the site on which the combined heat and power system is located.

(i) The obligations of alternative retail electric suppliers and electric utilities operating outside their service territories to procure renewable energy resources, make alternative compliance payments, and file annual reports, and the obligations of the Commission to determine and post alternative compliance payment rates, shall terminate effective on the date that electric utilities begin procuring renewable energy resources for 100% of the actual load of retail customers whose electric service has been declared competitive pursuant to Section 16-113 of this Act, as determined by paragraph (l) of subsection (c) of Section 1-75 of the Illinois Power Agency Act, provided that alternative retail electric suppliers and electric utilities operative outside their service territories shall be obligated to make all alternative compliance payments that they were obligated to pay for periods through and including that date, but were not paid as of that date. The Commission shall continue to enforce the payment of unpaid alternative compliance payments after that date in accordance with subsections (f) and (g) of this Section. All alternative compliance payments made after that date shall be remitted to the applicable electric utility and used to purchase renewable energy credits, in accordance with Section 1-75 of the Illinois Power Agency Act.

Sec. 16-127. Environmental disclosure.

(a) Effective January 1, 2013, every electric utility and alternative retail electric supplier shall provide the following information, to the maximum extent practicable, to its customers on a quarterly basis:

(i) the known sources of electricity supplied, broken-out by percentages, of biomass power, coal-fired power, hydro power, natural gas-fired power, nuclear power, oil-fired power, solar power, wind power and other resources, respectively;

(ii) a pie chart that graphically depicts the percentages of the sources of the electricity supplied as set forth in subparagraph (i) of this subsection; and

(iii) a pie chart that graphically depicts the quantity of renewable energy resources procured pursuant to Section 1-75 of the Illinois Power Agency Act as a percentage of electricity supplied to serve eligible retail customers as defined in Section 16-111.5(a) of this Act; and

(iv) after May 31, 2017, a pie chart that graphically depicts the quantity of zero emission credits from zero emission resources procured pursuant to Section 1-75 of the Illinois Power Agency Act as a percentage of the actual
load of retail customers within its service area.

(b) In addition, every electric utility and alternative retail electric supplier shall provide, to the maximum extent practicable, to its customers on a quarterly basis, a standardized chart in a format to be determined by the Commission in a rule following notice and hearings which provides the amounts of carbon dioxide, nitrogen oxides and sulfur dioxide emissions and nuclear waste attributable to the known sources of electricity supplied as set forth in subparagraph (i) of subsection (a) of this Section.

(c) The electric utilities and alternative retail electric suppliers may provide their customers with such other information as they believe relevant to the information required in subsections (a) and (b) of this Section. All of the information required in subsections (a) and (b) of this Section shall be made available by the electric utilities or alternative retail electric suppliers either in an electronic medium, such as on a website or by electronic mail, or through the U.S. Postal Service.

(d) For the purposes of subsection (a) of this Section, "biomass" means dedicated crops grown for energy production and organic wastes.

(e) All of the information provided in subsections (a) and (b) of this Section shall be presented to the Commission for inclusion in its World Wide Web Site.

(Source: P.A. 97-1092, eff. 1-1-13.)
Section 20. The Energy Assistance Act is amended by changing Sections 13 and 18 as follows:

(305 ILCS 20/13)

(Section scheduled to be repealed on December 31, 2018)

(a) The Supplemental Low-Income Energy Assistance Fund is hereby created as a special fund in the State Treasury. The Supplemental Low-Income Energy Assistance Fund is authorized to receive moneys from voluntary donations from individuals, foundations, corporations, and other sources, moneys received pursuant to Section 17, and, by statutory deposit, the moneys collected pursuant to this Section. The Fund is also authorized to receive voluntary donations from individuals, foundations, corporations, and other sources, as well as contributions made in accordance with Section 507MM of the Illinois Income Tax Act. Subject to appropriation, the Department shall use moneys from the Supplemental Low-Income Energy Assistance Fund for payments to electric or gas public utilities, municipal electric or gas utilities, and electric cooperatives on behalf of their customers who are participants in the program authorized by Sections 4 and 18 of this Act, for the provision of weatherization services and for administration of the Supplemental Low-Income Energy Assistance Fund. The yearly expenditures for weatherization may not exceed 10% of the
amount collected during the year pursuant to this Section. The
yearly administrative expenses of the Supplemental Low-Income
Energy Assistance Fund may not exceed 10% of the amount
collected during that year pursuant to this Section, except
when unspent funds from the Supplemental Low-Income Energy
Assistance Fund are reallocated from a previous year; any
unspent balance of the 10% administrative allowance may be
utilized for administrative expenses in the year they are
reallocated.

(b) Notwithstanding the provisions of Section 16-111 of the
Public Utilities Act but subject to subsection (k) of this
Section, each public utility, electric cooperative, as defined
in Section 3.4 of the Electric Supplier Act, and municipal
utility, as referenced in Section 3-105 of the Public Utilities
Act, that is engaged in the delivery of electricity or the
distribution of natural gas within the State of Illinois shall,
effective January 1, 1998, assess each of its customer accounts
a monthly Energy Assistance Charge for the Supplemental
Low-Income Energy Assistance Fund. The delivering public
utility, municipal electric or gas utility, or electric or gas
cooperative for a self-assessing purchaser remains subject to
the collection of the fee imposed by this Section. The monthly
charge shall be as follows:

(1) $0.48 per month on each account for residential
electric service; provided that beginning January 1, 2019,
the monthly charge for residential electric service shall
change to $0.72 for a period of 5 years; after the 5-year period, the charge shall be reduced to $0.48 per month;

(2) $0.48 per month on each account for residential gas service;

(3) $4.80 per month on each account for non-residential electric service which had less than 10 megawatts of peak demand during the previous calendar year;

(4) $4.80 per month on each account for non-residential gas service which had distributed to it less than 4,000,000 therms of gas during the previous calendar year;

(5) $360 per month on each account for non-residential electric service which had 10 megawatts or greater of peak demand during the previous calendar year; and

(6) $360 per month on each account for non-residential gas service which had 4,000,000 or more therms of gas distributed to it during the previous calendar year.

The incremental change to such charges imposed by this amendatory Act of the 96th General Assembly shall not (i) be used for any purpose other than to directly assist customers and (ii) be applicable to utilities serving less than 100,000 customers in Illinois on January 1, 2009. Moreover, the incremental change to such charges imposed by this amendatory Act of the 99th General Assembly is intended to assist low-income customers, including, but not limited to, those who may have their monthly electric bills increase because of a transition to demand-based rates under Section 9-105 of the
Public Utilities Act, and such incremental change shall not (i) be used for any purpose other than to fund the Percentage of Income Payment Plan program, Arrearage Reduction program, and Supplemental Arrearage Reduction program under Section 18 of this Act or (ii) be applicable to utilities serving less than 100,000 customers in Illinois on January 1, 2009.

In addition, electric and gas utilities have committed, and shall contribute, a one-time payment of $22 million to the Fund, within 10 days after the effective date of the tariffs established pursuant to Sections 16-111.8 and 19-145 of the Public Utilities Act to be used for the Department’s cost of implementing the programs described in Section 18 of this amendatory Act of the 96th General Assembly, the Arrearage Reduction Program described in Section 18, and the programs described in Section 8-105 of the Public Utilities Act. If a utility elects not to file a rider within 90 days after the effective date of this amendatory Act of the 96th General Assembly, then the contribution from such utility shall be made no later than February 1, 2010.

(c) For purposes of this Section:

(1) "residential electric service" means electric utility service for household purposes delivered to a dwelling of 2 or fewer units which is billed under a residential rate, or electric utility service for household purposes delivered to a dwelling unit or units which is billed under a residential rate and is registered
by a separate meter for each dwelling unit;

(2) "residential gas service" means gas utility service for household purposes distributed to a dwelling of 2 or fewer units which is billed under a residential rate, or gas utility service for household purposes distributed to a dwelling unit or units which is billed under a residential rate and is registered by a separate meter for each dwelling unit;

(3) "non-residential electric service" means electric utility service which is not residential electric service; and

(4) "non-residential gas service" means gas utility service which is not residential gas service.

(d) Within 30 days after the effective date of this amendatory Act of the 96th General Assembly, each public utility engaged in the delivery of electricity or the distribution of natural gas shall file with the Illinois Commerce Commission tariffs incorporating the Energy Assistance Charge in other charges stated in such tariffs, which shall become effective no later than the beginning of the first billing cycle following such filing.

(e) The Energy Assistance Charge assessed by electric and gas public utilities shall be considered a charge for public utility service.

(f) By the 20th day of the month following the month in which the charges imposed by the Section were collected, each
public utility, municipal utility, and electric cooperative shall remit to the Department of Revenue all moneys received as payment of the Energy Assistance Charge on a return prescribed and furnished by the Department of Revenue showing such information as the Department of Revenue may reasonably require; provided, however, that a utility offering an Arrearage Reduction Program or Supplemental Arrearage Reduction Program pursuant to Section 18 of this Act shall be entitled to net those amounts necessary to fund and recover the costs of such Program as authorized by that Section that is no more than the incremental change in such Energy Assistance Charge authorized by this amendatory Act of the 96th General Assembly and this amendatory Act of the 99th General Assembly.

If a customer makes a partial payment, a public utility, municipal utility, or electric cooperative may elect either:

(i) to apply such partial payments first to amounts owed to the utility or cooperative for its services and then to payment for the Energy Assistance Charge or

(ii) to apply such partial payments on a pro-rata basis between amounts owed to the utility or cooperative for its services and to payment for the Energy Assistance Charge.

(g) The Department of Revenue shall deposit into the Supplemental Low-Income Energy Assistance Fund all moneys remitted to it in accordance with subsection (f) of this Section; provided, however, that the amounts remitted by each utility shall be used to provide assistance to that utility's
customers. The utilities shall coordinate with the Department to establish an equitable and practical methodology for implementing this subsection (g) beginning with the 2010 program year.

(h) On or before December 31, 2002, the Department shall prepare a report for the General Assembly on the expenditure of funds appropriated from the Low-Income Energy Assistance Block Grant Fund for the program authorized under Section 4 of this Act.

(i) The Department of Revenue may establish such rules as it deems necessary to implement this Section.

(j) The Department of Commerce and Economic Opportunity may establish such rules as it deems necessary to implement this Section.

(k) The charges imposed by this Section shall only apply to customers of municipal electric or gas utilities and electric or gas cooperatives if the municipal electric or gas utility or electric or gas cooperative makes an affirmative decision to impose the charge. If a municipal electric or gas utility or an electric cooperative makes an affirmative decision to impose the charge provided by this Section, the municipal electric or gas utility or electric cooperative shall inform the Department of Revenue in writing of such decision when it begins to impose the charge. If a municipal electric or gas utility or electric or gas cooperative does not assess this charge, the Department may not use funds from the Supplemental Low-Income Energy
Assistance Fund to provide benefits to its customers under the program authorized by Section 4 of this Act.

In its use of federal funds under this Act, the Department may not cause a disproportionate share of those federal funds to benefit customers of systems which do not assess the charge provided by this Section.

This Section is repealed effective December 31, 2018 unless renewed by action of the General Assembly. The General Assembly shall consider the results of the evaluations described in Section 8 in its deliberations.

(305 ILCS 20/18)

Sec. 18. Financial assistance; payment plans.

(a) The Percentage of Income Payment Plan (PIPP or PIP Plan) is hereby created as a mandatory bill payment assistance program for low-income residential customers of utilities serving more than 100,000 retail customers as of January 1, 2009. The PIP Plan will:

(1) bring participants' gas and electric bills into the range of affordability;

(2) provide incentives for participants to make timely payments;

(3) encourage participants to reduce usage and participate in conservation and energy efficiency measures that reduce the customer's bill and payment requirements;
(4) identify participants whose homes are most in need of weatherization.

(b) For purposes of this Section:

(1) "LIHEAP" means the energy assistance program established under the Illinois Energy Assistance Act and the Low-Income Home Energy Assistance Act of 1981.

(2) "Plan participant" is an eligible participant who is also eligible for the PIPP and who will receive either a percentage of income payment credit under the PIPP criteria set forth in this Act or a benefit pursuant to Section 4 of this Act. Plan participants are a subset of eligible participants.

(3) "Pre-program arrears" means the amount a plan participant owes for gas or electric service at the time the participant is determined to be eligible for the PIPP or the program set forth in Section 4 of this Act.

(4) "Eligible participant" means any person who has applied for, been accepted and is receiving residential service from a gas or electric utility and who is also eligible for LIHEAP.

(c) The PIP Plan shall be administered as follows:

(1) The Department shall coordinate with Local Administrative Agencies (LAAs), to determine eligibility for the Illinois Low Income Home Energy Assistance Program (LIHEAP) pursuant to the Energy Assistance Act, provided
that eligible income shall be no more than 150% of the
poverty level. Applicants will be screened to determine
whether the applicant's projected payments for electric
service or natural gas service over a 12-month period
exceed the criteria established in this Section. To
maintain the financial integrity of the program, the
Department may limit eligibility to households with income
below 125% of the poverty level.

(2) The Department shall establish the percentage of
income formula to determine the amount of a monthly credit,
not to exceed $150 per month per household, not to exceed
$1,800 annually, that will be applied to PIP Plan
participants' utility bills based on the portion of the
bill that is the responsibility of the participant provided
that the percentage shall be no more than a total of 6% of
the relevant income for gas and electric utility bills
combined, but in any event no less than $10 per month,
unless the household does not pay directly for heat, in
which case its payment shall be 2.4% of income but in any
event no less than $5 per month. The Department may
establish a minimum credit amount based on the cost of
administering the program and may deny credits to otherwise
eligible participants if the cost of administering the
credit exceeds the actual amount of any monthly credit to a
participant. If the participant takes both gas and electric
service, 66.67% of the credit shall be allocated to the
entity that provides the participant's primary energy
supply for heating. Each participant shall enter into a
levelized payment plan for, as applicable, gas and electric
service and such plans shall be implemented by the utility
so that a participant's usage and required payments are
reviewed and adjusted regularly, but no more frequently
than quarterly. Nothing in this Section is intended to
prohibit a customer, who is otherwise eligible for LIHEAP,
from participating in the program described in Section 4 of
this Act. Eligible participants who receive such a benefit
shall be considered plan participants and shall be eligible
to participate in the Arrearage Reduction Program
described in item (5) of this subsection (c).

(3) The Department shall remit, through the LAAs, to
the utility or participating alternative supplier that
portion of the plan participant's bill that is not the
responsibility of the participant. In the event that the
Department fails to timely remit payment to the utility,
the utility shall be entitled to recover all costs related
to such nonpayment through the automatic adjustment clause
tariffs established pursuant to Section 16-111.8 and
Section 19-145 of the Public Utilities Act. For purposes of
this item (3) of this subsection (c), payment is due on the
date specified on the participant's bill. The Department,
the Department of Revenue and LAAs shall adopt processes
that provide for the timely payment required by this item
(3) of this subsection (c).

(4) A plan participant is responsible for all actual charges for utility service in excess of the PIPP credit. Pre-program arrears that are included in the Arrearage Reduction Program described in item (5) of this subsection (c) shall not be included in the calculation of the levelized payment plan. Emergency or crisis assistance payments shall not affect the amount of any PIPP credit to which a participant is entitled.

(5) Electric and gas utilities subject to this Section shall implement an Arrearage Reduction Program (ARP) for plan participants as follows: for each month that a plan participant timely pays his or her utility bill, the utility shall apply a credit to a portion of the participant's pre-program arrears, if any, equal to one-twelfth of such arrearage provided that the total amount of arrearage credits shall equal no more than $1,000 annually for each participant for gas and no more than $1,000 annually for each participant for electricity. In the third year of the PIPP, the Department, in consultation with the Policy Advisory Council established pursuant to Section 5 of this Act, shall determine by rule an appropriate per participant total cap on such amounts, if any. Those plan participants participating in the ARP shall not be subject to the imposition of any additional late payment fees on pre-program arrears covered by the ARP. In
all other respects, the utility shall bill and collect the
monthly bill of a plan participant pursuant to the same
rules, regulations, programs and policies as applicable to
residential customers generally. Participation in the
Arrearage Reduction Program shall be limited to the maximum
amount of funds available as set forth in subsection (f) of
Section 13 of this Act. In the event any donated funds
under Section 13 of this Act are specifically designated
for the purpose of funding the ARP, the Department shall
remit such amounts to the utilities upon verification that
such funds are needed to fund the ARP. Nothing in this
Section shall preclude a utility from continuing to
implement, and apply credits under, an ARP in the event
that the PIPP or LIHEAP is suspended due to lack of funding
such that the plan participant does not receive a benefit
under either the PIPP or LIHEAP.

(5.5) In addition to the ARP described in paragraph (5)
of this subsection (c), utilities may also implement a
Supplemental Arrearage Reduction Program (SARP) for
eligible participants who are not able to become plan
participants due to PIPP timing or funding constraints. If
a utility elects to implement a SARP, it shall be
administered as follows: for each month that a SARP
participant timely pays his or her utility bill, the
utility shall apply a credit to a portion of the
participant's pre-program arrears, if any, equal to
one-twelfth of such arrearage, provided that the utility
may limit the total amount of arrearage credits to no more
than $1,000 annually for each participant for gas and no
more than $1,000 annually for each participant for
electricity. SARP participants shall not be subject to the
imposition of any additional late payment fees on
pre-program arrears covered by the ARP. In all other
respects, the utility shall bill and collect the monthly
bill of a SARP participant pursuant to the same rules,
regulations, programs, and policies as applicable to
residential customers generally. Participation in the SARP
shall be limited to the maximum amount of funds available
as set forth in subsection (f) of Section 13 of this Act.
In the event any donated funds under Section 13 of this Act
are specifically designated for the purpose of funding the
SARP, the Department shall remit such amounts to the
utilities upon verification that such funds are needed to
fund the SARP.

(6) The Department may terminate a plan participant's
eligibility for the PIP Plan upon notification by the
utility that the participant's monthly utility payment is
more than 45 days past due.

(7) The Department, in consultation with the Policy
Advisory Council, may adjust the number of PIP Plan
participants annually, if necessary, to match the
availability of funds from LIHEAP. Any plan participant who
qualifies for a PIPP credit under a utility's PIPP shall be entitled to participate in and receive a credit under such utility's ARP for so long as such utility has ARP funds available, regardless of whether the customer's participation under another utility's PIPP or ARP has been curtailed or limited because of a lack of funds.

(8) The Department shall fully implement the PIPP at the earliest possible date it is able to effectively administer the PIPP. Within 90 days of the effective date of this amendatory Act of the 96th General Assembly, the Department shall, in consultation with utility companies, participating alternative suppliers, LAAs and the Illinois Commerce Commission (Commission), issue a detailed implementation plan which shall include detailed testing protocols and analysis of the capacity for implementation by the LAAs and utilities. Such consultation process also shall address how to implement the PIPP in the most cost-effective and timely manner, and shall identify opportunities for relying on the expertise of utilities, LAAs and the Commission. Following the implementation of the testing protocols, the Department shall issue a written report on the feasibility of full or gradual implementation. The PIPP shall be fully implemented by September 1, 2011, but may be phased in prior to that date.

(9) As part of the screening process established under item (1) of this subsection (c), the Department and LAAs
shall assess whether any energy efficiency or demand
response measures are available to the plan participant at
no cost, and if so, the participant shall enroll in any
such program for which he or she is eligible. The LAAs
shall assist the participant in the applicable enrollment
or application process.

(10) Each alternative retail electric and gas supplier
serving residential customers shall elect whether to
participate in the PIPP or ARP described in this Section.
Any such supplier electing to participate in the PIPP shall
provide to the Department such information as the
Department may require, including, without limitation,
information sufficient for the Department to determine the
proportionate allocation of credits between the
alternative supplier and the utility. If a utility in whose
service territory an alternative supplier serves customers
contributes money to the ARP fund which is not recovered
from ratepayers, then an alternative supplier which
participates in ARP in that utility's service territory
shall also contribute to the ARP fund in an amount that is
commensurate with the number of alternative supplier
customers who elect to participate in the program.

(d) The Department, in consultation with the Policy
Advisory Council, shall develop and implement a program to
educate customers about the PIP Plan and about their rights and
responsibilities under the percentage of income component. The
Department, in consultation with the Policy Advisory Council, shall establish a process that LAAs shall use to contact customers in jeopardy of losing eligibility due to late payments. The Department shall ensure that LAAs are adequately funded to perform all necessary educational tasks.

(e) The PIPP shall be administered in a manner which ensures that credits to plan participants will not be counted as income or as a resource in other means-tested assistance programs for low-income households or otherwise result in the loss of federal or State assistance dollars for low-income households.

(f) In order to ensure that implementation costs are minimized, the Department and utilities shall work together to identify cost-effective ways to transfer information electronically and to employ available protocols that will minimize their respective administrative costs as follows:

(1) The Commission may require utilities to provide such information on customer usage and billing and payment information as required by the Department to implement the PIP Plan and to provide written notices and communications to plan participants.

(2) Each utility and participating alternative supplier shall file annual reports with the Department and the Commission that cumulatively summarize and update program information as required by the Commission's rules. The reports shall track implementation costs and contain
such information as is necessary to evaluate the success of the PIPP.

(3) The Department and the Commission shall have the authority to promulgate rules and regulations necessary to execute and administer the provisions of this Section.

(g) Each utility shall be entitled to recover reasonable administrative and operational costs incurred to comply with this Section from the Supplemental Low Income Energy Assistance Fund. The utility may net such costs against monies it would otherwise remit to the Funds, and each utility shall include in the annual report required under subsection (f) of this Section an accounting for the funds collected.
