

104TH GENERAL ASSEMBLY

State of Illinois

2025 and 2026

HB3650

Introduced 2/18/2025, by Rep. Camille Y. Lilly

SYNOPSIS AS INTRODUCED:

See Index

Amends the Energy Transition Act. Adds electrification industries to clean energy jobs. Amends the Public Utilities Act. Provides that a gas utility may cease providing service if the Illinois Commerce Commission determines that adequate substitute service is available at a reasonable cost to support the existing end uses of the affected utility customers. Provides for cost-effective energy efficiency measures for natural gas utilities that supersede existing provisions concerning natural gas energy efficiency programs and take effect beginning January 1, 2025. Provides that gas main and gas service extension policies shall be based on the principle that the full incremental cost associated with new development and growth shall be borne by the customers that cause those incremental costs. Provides that, no later than 60 days after the effective date of the amendatory Act, the Commission shall initiate a docketed rulemaking reviewing each gas public utility tariff that provides for gas main and gas service extensions without additional charge to new customers in excess of the default extensions as specified in administrative rule. Adds the Clean Building Heating Law Article to the Act, with provisions concerning emissions standards for heating in buildings, as well as related and other provisions. Adds the 2050 Heat Decarbonization Standard Article to the Act, with provisions concerning options for compliance, measures for customer emission reduction, customer emission reductions, tradable clean heat credits, banking of emission reductions, equity in emission reductions, enforcement, the 2050 Heat Decarbonization Pathways Study, gas infrastructure planning, a study on gas utility financial incentive reform, and reporting requirements. Adds the Statewide Navigator Program Law Article to the Act, with provisions concerning creation of a statewide navigator program, as well as related and other provisions. Effective immediately.

LRB104 09396 AAS 19455 b

1 AN ACT concerning regulation.

2 **Be it enacted by the People of the State of Illinois,**
3 **represented in the General Assembly:**

4 Section 5. The Energy Transition Act is amended by
5 changing Section 5-25 as follows:

6 (20 ILCS 730/5-25)

7 (Section scheduled to be repealed on September 15, 2045)

8 Sec. 5-25. Clean Jobs Curriculum.

9 (a) As used in this Section, "clean energy jobs", subject
10 to administrative rules, means jobs in the solar energy, wind
11 energy, energy efficiency, energy storage, solar thermal,
12 green hydrogen, geothermal, electric vehicle industries,
13 electrification industries, other renewable energy industries,
14 industries achieving emission reductions, and other related
15 sectors including related industries that manufacture,
16 develop, build, maintain, or provide ancillary services to
17 renewable energy resources or energy efficiency products or
18 services, including the manufacture and installation of
19 healthier building materials that contain fewer hazardous
20 chemicals. "Clean energy jobs" includes administrative, sales,
21 other support functions within these industries and other
22 related sector industries.

23 (b) The Department shall convene a comprehensive

1 stakeholder process that includes representatives from the
2 State Board of Education, the Illinois Community College
3 Board, the Department of Labor, community-based organizations,
4 workforce development providers, labor unions, building
5 trades, educational institutions, residents of BIPOC and
6 low-income communities, residents of environmental justice
7 communities, clean energy businesses, nonprofit organizations,
8 worker-owned cooperatives, other groups that provide clean
9 energy jobs opportunities, groups that provide construction
10 and building trades job opportunities, and other participants
11 to identify the career pathways and training curriculum needed
12 for participants to be skilled, work ready, and able to enter
13 clean energy jobs. The curriculum shall:

14 (1) identify the core training curricular competency
15 areas needed to prepare workers to enter clean energy and
16 related sector jobs;

17 (2) identify a set of required core cross-training
18 competencies provided in each training area for clean
19 energy jobs with the goal of enabling any trainee to
20 receive a standard set of skills common to multiple
21 training areas that would provide a foundation for
22 pursuing a career composed of multiple clean energy job
23 types;

24 (3) include approaches to integrate broad occupational
25 training to provide career entry into the general
26 construction and building trades sector and any remedial

1 education and work readiness support necessary to achieve
2 educational and professional eligibility thresholds; and

3 (4) identify on-the-job training formats, where
4 relevant, and identify suggested trainer certification
5 standards, where relevant.

6 (c) The Department shall publish a report that includes
7 the findings, recommendations, and core curriculum identified
8 by the stakeholder group and shall post a copy of the report on
9 its public website. The Department shall convene the process
10 described to update and modify the recommended curriculum
11 every 3 years to ensure the curriculum contents are current to
12 the evolving clean energy industries, practices, and
13 technologies.

14 (d) Organizations that receive funding to provide training
15 under the Clean Jobs Workforce Network Program, including, but
16 not limited to, community-based and labor-based training
17 providers, and educational institutions must use the core
18 curriculum that is developed under this Section.

19 (Source: P.A. 102-662, eff. 9-15-21.)

20 Section 10. The Public Utilities Act is amended by
21 changing Sections 1-102, 8-101, 9-229, 9-241, and 16-111.10
22 and by adding Sections 1-103, 3-128, 8-104B, 9-228.5, 9-235,
23 9-254, and 9-255, and Articles XXIII, XXIV, and XXV as
24 follows:

1 (220 ILCS 5/1-102) (from Ch. 111 2/3, par. 1-102)

2 Sec. 1-102. Findings and Intent. The General Assembly
3 finds that the health, welfare, and prosperity of all Illinois
4 citizens require the provision of adequate, efficient,
5 reliable, affordable, environmentally safe, and least-cost
6 public utility services at prices which accurately reflect the
7 long-term cost of such services and which are equitable to all
8 citizens. It is therefore declared to be the policy of the
9 State that public utilities shall continue to be regulated
10 effectively and comprehensively. It is further declared that
11 the goals and objectives of such regulation shall be to
12 ensure:

13 (a) Efficiency: the provision of reliable and
14 affordable energy services that meet the State's climate
15 and emissions reduction targets at the lowest societal
16 ~~least possible~~ cost to the citizens of the State; in such
17 manner that:

18 (i) physical, human, and financial resources are
19 allocated efficiently and equitably;

20 (ii) all supply and demand options are considered
21 and evaluated using comparable terms and methods in
22 order to determine how utilities shall meet State
23 emissions reduction targets and their customers'
24 demands for public utility services at the lowest
25 societal ~~least~~ cost;

26 (iii) utilities are allowed a sufficient return on

1 investment so as to enable them to attract capital in
2 financial markets at competitive rates;

3 (iv) tariff rates for the sale of various public
4 utility services are authorized such that they
5 accurately reflect the cost of delivering those
6 services and allow utilities to recover the total
7 costs prudently and reasonably incurred;

8 (v) variation in costs by customer class and time
9 of use is taken into consideration in authorizing
10 rates for each class.

11 (b) Environmental Quality: the protection of the
12 environment, people, and communities from the adverse
13 external costs of public utility services, including
14 environmental costs, so that:

15 (i) environmental costs of proposed actions having
16 a significant impact on the environment and the
17 environmental impact of the alternatives are
18 identified, documented, monetized, included in
19 assessments of cost, and considered in all aspects of
20 the regulatory process;

21 (ii) the prudently and reasonably incurred costs
22 of environmental controls are recovered.

23 (c) Reliability: the ability of utilities to provide
24 consumers with public utility services under varying
25 demand conditions in such manner that suppliers of public
26 utility services are able to provide service at varying

1 levels of economic reliability giving appropriate
2 consideration to the costs likely to be incurred as a
3 result of service interruptions, and to the costs of
4 increasing or maintaining current levels of reliability
5 consistent with commitments to consumers.

6 (d) Equity: the fair treatment of consumers, including
7 equity investment eligible persons and equity investment
8 eligible communities, as defined in the Energy Transition
9 Act, and investors in order that

10 (i) the public health, safety, and welfare shall
11 be protected;

12 (ii) the application of rates is based on public
13 understandability and acceptance of the reasonableness
14 of the rate structure and level;

15 (iii) the cost of supplying public utility
16 services is allocated to those who cause the costs to
17 be incurred;

18 (iv) if factors other than cost of service are
19 considered in regulatory decisions, the rationale for
20 these actions is set forth;

21 (v) regulation allows for orderly transition
22 periods to accommodate changes in public utility
23 service markets;

24 (vi) regulation does not result in undue ~~or~~
25 ~~sustained~~ adverse impact on utility earnings;

26 (vii) the impacts of regulatory actions on all

1 sectors of the State are carefully weighed;

2 (viii) the rates for utility services are
3 affordable and, therefore, ensure and preserve the
4 availability and accessibility of such services to all
5 customers, and customers are not energy burdened or
6 severely energy burdened citizens.

7 As used in this subsection (d):

8 (I) "Energy burdened" means, with respect to a
9 customer's household, that the household pays 6% or
10 more of its income toward electricity and gas bills.

11 (II) "Severely energy burdened" means, with
12 respect to a customer's household, that the household
13 pays 10% or more of its income toward electricity and
14 gas bills.

15 (e) Affordability: the ability of utilities to ensure
16 uninterrupted access to essential utility service; to
17 minimize and reduce over time the number of households who
18 are energy burdened and severely energy burdened, as
19 defined in this Act, ideally to zero; and to minimize
20 disconnections to residential customers in a manner which
21 ensures that:

22 (i) all low-income customers, defined as those
23 whose income is less than or equal to 80% of the area
24 median income, as defined by the United States
25 Department of Housing and Urban Development, have
26 access to a discounted utility rate;

1 (ii) low-income customers 65 years of age or older
2 are not disconnected from essential utility service
3 due to inability to afford the monthly bill;

4 (iii) low-income customers with children under the
5 age of 6 are not disconnected from essential utility
6 service due to inability to afford the monthly bill;

7 (iv) persons with medical conditions are not
8 disconnected from essential utility service if a
9 medical or qualified professional as described in
10 subsection (b) of Section 8-202.7 certifies that the
11 condition will be exacerbated by disconnection from
12 essential utility service;

13 (v) disconnection of essential utility service is
14 not accelerated based on a utility's payment risk
15 assessment of a customer; and

16 (vi) a utility assesses whether a customer may be
17 eligible for energy assistance programs under the
18 Energy Assistance Act, provides the customer with
19 specific information on where and how to obtain energy
20 assistance, and ceases disconnection activity for 60
21 days to allow the customer to apply for and establish
22 eligibility for the energy assistance.

23 It is further declared to be the policy of the State that
24 this Act shall not apply in relation to motor carriers and rail
25 carriers as defined in the Illinois Commercial Transportation
26 Law, or to the Commission in the regulation of such carriers.

1 Nothing in this Act shall be construed to limit, restrict,
2 or mitigate in any way the power and authority of the State's
3 Attorneys or the Attorney General under the Consumer Fraud and
4 Deceptive Business Practices Act.

5 (Source: P.A. 92-22, eff. 6-30-01.)

6 (220 ILCS 5/1-103 new)

7 Sec. 1-103. Commission methodologies and metrics. The
8 Commission shall oversee the objectives identified in Section
9 1-102 by establishing and implementing methodologies for
10 tracking each of the following metrics:

11 (1) Environmental costs: The Commission shall
12 establish a social cost of greenhouse gases, measured in
13 dollars per ton of carbon dioxide equivalent, that shall
14 serve as a monetary estimate of the value of not emitting a
15 ton of greenhouse gas emissions. The Commission shall
16 consider prior or existing estimates of the social cost of
17 carbon issued or adopted by the federal government,
18 appropriate international bodies, or other appropriate and
19 reputable scientific organizations. The social cost of
20 greenhouse gases shall:

21 (A) estimate the emissions for all relevant
22 greenhouse gases, including carbon, methane, nitrous
23 oxide, hydrofluorocarbons and hydrofluoroolefins,
24 perfluorocarbons, sulfur hexafluoride, and nitrogen
25 trifluoride;

1 (B) consider the fullest geographic and temporal
2 scope of damages;

3 (C) for the purposes of this Act, the cost of
4 greenhouse gas emissions is no less than the cost per
5 metric ton of carbon dioxide equivalent emissions,
6 using the 2.5% discount rate, listed in Table ES-1 of
7 "Technical Support Document: Social Cost of Carbon,
8 Methane, and Nitrous Oxide Interim Estimates under
9 Executive Order 13990", a report prepared in support
10 of federal Executive Order 13990 and dated February
11 2021.

12 The Commission must annually adjust the costs
13 established in this Section to reflect the effect of
14 inflation and may, at its discretion, set the price at a
15 higher level than described above, but no lower.

16 (2) Impacts to public health: The Commission shall
17 develop a methodology for measuring and monetizing in cost
18 assessments the public health impacts of pollutants,
19 including impacts of both indoor and outdoor air quality,
20 including carbon monoxide and carbon dioxide, nitrogen
21 oxides, including nitrogen dioxide, particulate matter,
22 formaldehyde, sulfur dioxide, ozone, and lead. The
23 Commission shall integrate its methodology into
24 assessments of utility system planning and supply and
25 demand-side resource selection.

26 It is further declared to be the policy of the State that

1 this Section does not apply to motor carriers and rail
2 carriers as defined in the Illinois Commercial Transportation
3 Law or to the Commission in the regulation of such carriers.

4 Nothing in this Section shall be construed to limit,
5 restrict, or mitigate in any way the power and authority of the
6 State's Attorneys or the Attorney General under the Consumer
7 Fraud and Deceptive Business Practices Act.

8 (220 ILCS 5/3-128 new)

9 Sec. 3-128. Fixed charge. "Fixed charge" means a charge
10 that is assessed by a public utility as part of its rates, is
11 equal across all customers or customers of a certain class,
12 and is not directly proportional to a customer's usage.

13 (220 ILCS 5/8-101) (from Ch. 111 2/3, par. 8-101)

14 Sec. 8-101. Duties of public utilities; nondiscrimination.
15 A public utility shall furnish, provide, and maintain such
16 service instrumentalities, equipment, and facilities as shall
17 promote the safety, health, comfort, and convenience of its
18 patrons, employees, and public and as shall be in all respects
19 adequate, efficient, just, and reasonable.

20 All rules and regulations made by a public utility
21 affecting or pertaining to its charges or service to the
22 public shall be just and reasonable.

23 An electric ~~A public~~ utility shall, and a gas utility may,
24 upon reasonable notice, furnish to all persons who may apply

1 therefor and be reasonably entitled thereto, suitable
2 facilities and service, without discrimination and without
3 delay. Notwithstanding any other provision of law, a gas
4 utility may cease providing service if the Commission
5 determines that adequate substitute service is available at a
6 reasonable cost to support the existing end uses of the
7 affected utility customers. Any applicant for gas service
8 shall receive clear, timely information from the gas utility,
9 written in plain language, and approved by the Commission
10 after stakeholder input on incentives and opportunities for
11 installing, as alternatives to gas, energy-efficient electric
12 technologies and incentives and opportunities for other energy
13 efficiency measures, weatherization, demand management, and
14 distributed energy resource programs. The information provided
15 must include, among other things, information detailing
16 electrification incentives in the Inflation Reduction Act and
17 describing how the applicant can elect to receive the upfront
18 discounts or tax incentives applicable to the applicant's
19 electric purchases.

20 Nothing in this Section shall be construed to prevent a
21 public utility from accepting payment electronically or by the
22 use of a customer-preferred financially accredited credit or
23 debit methodology.

24 (Source: P.A. 92-22, eff. 6-30-01.)

1 Sec. 8-104B. Gas energy efficiency.

2 (a) As used in this Section:

3 "Benefit-cost ratio" means the ratio of the net present
4 value of the total benefits of the measures to the net present
5 value of the total costs as calculated over the lifetime of the
6 measures.

7 "Cost-effective measure" means a measure that satisfies
8 the total resource cost test.

9 "Energy efficiency measure" means a measure that reduces
10 (i) the total Btus of electricity and natural gas and other
11 utility-delivered gaseous fuels needed to meet an end use or
12 end uses and (ii) the amount of natural gas and other
13 utility-delivered gaseous fuels consumed on site, at the home
14 or business facility, to meet an end use or end uses.

15 "Total resource cost test" means a standard that is met
16 if, for an investment in an energy efficiency measure, the
17 benefit-cost ratio is greater than one. The total resource
18 cost test quantifies the net savings obtained through the
19 substitution of demand-side measures for supply resources by
20 comparing (i) the sum of avoided natural gas utility costs,
21 representing the benefits that accrue to the natural gas
22 system and the participant in the delivery of those energy
23 efficiency measures and including avoided costs associated
24 with the use of electricity or other fuels, avoided costs
25 associated with reduced water consumption, and avoided
26 operation and maintenance costs, as well as other quantifiable

1 societal benefits and (ii) the sum of all incremental costs of
2 end-use measures, including both utility and participant
3 contribution costs to administer, deliver, and evaluate each
4 demand-side measure. In calculating avoided costs, reasonable
5 estimates shall be included for financial costs likely to be
6 imposed by future regulation of emissions of greenhouse gases.
7 In discounting future societal costs and benefits for the
8 purpose of calculating net present values, a societal discount
9 rate based on actual, long-term U.S. Treasury bond yields
10 shall be used. The income-qualified measures described in
11 paragraphs (5) and (6) of subsection (d) shall not be required
12 to meet the total resource cost test.

13 (b) It is the policy of the State for gas utilities to be
14 required to use cost-effective energy efficiency measures to
15 reduce delivery load. Requiring investment in cost-effective
16 energy efficiency measures will reduce direct and indirect
17 costs to consumers by decreasing environmental impacts,
18 reducing the amount of natural gas and other utility-delivered
19 gaseous fuels that need to be purchased, and avoiding or
20 delaying the need for new transmission, distribution, storage,
21 and other related infrastructure. Moreover, the public
22 interest is served by allowing gas utilities to recover costs
23 for reasonably and prudently incurred expenditures for energy
24 efficiency measures.

25 (c) This Section applies to all gas distribution utilities
26 in the State and supersedes Section 8-104 beginning January 1,

1 2024.

2 (d) Natural gas utilities shall implement cost-effective
3 energy efficiency measures to achieve all of the following
4 requirements:

5 (1) Total incremental annual savings shall be equal to
6 at least 0.6% of annual sales to distribution customers in
7 2025, 0.8% of such sales in 2026, and at least 1% of such
8 sales in 2027 and each subsequent year. For the purpose of
9 calculating savings as a percent of sales to distribution
10 customers for a given program year, the denominator of
11 sales to distribution customers shall be annual average
12 sales over the second, third, and fourth full calendar
13 years prior to the beginning of the program year.

14 (2) The savings achieved must have an average life of
15 at least 12 years.

16 (3) Savings may not be applied toward achievement of
17 utility savings goals if the savings arise from the
18 installation of efficient new gas furnaces, gas boilers,
19 gas water heaters, or other gas-consuming equipment in a
20 residential building, such as a single-family,
21 individually metered multifamily building or a
22 master-metered multifamily building.

23 (4) At least 50% of the entire budget for efficiency
24 programs shall be spent on energy efficiency measures that
25 reduce space heating needs through improvements to the
26 efficiency of building envelopes, including, but not

1 limited to, insulation measures and efficient windows and
2 energy efficiency measures that reduce air leakage through
3 improvements to systems for distributing heat, including,
4 but not limited to, duct leakage reduction, duct
5 insulation, or pipe insulation in buildings or through
6 improved heating systems controls, including, but not
7 limited to, advanced thermostats and demand control
8 ventilation. Spending on efficient furnaces, efficient
9 boilers, or other efficient heating systems is permitted
10 within business efficiency programs but does not count
11 toward this minimum requirement for spending on building
12 envelope, heating distribution, and control efficiencies.
13 Spending on income-qualified building envelope measures,
14 heating distribution system measures, and heating controls
15 does count toward this requirement. The portion of
16 portfolio spending on program marketing, training of
17 installers, audits of buildings, inspections of work
18 performed, and other administrative and technical expenses
19 that are clearly tied to promotion or installation of
20 building envelope or heating distribution system measures
21 shall count toward this requirement. If this minimum
22 requirement is not met, any performance incentive earned
23 under subsection (h) should be reduced by the percentage
24 point level of shortfall in meeting this requirement.

25 (5) The portion of the entire budget for efficiency
26 programs that is spent on efficiency measures for

1 income-qualified households shall be the greater of 20% or
2 5 percentage points more than the proportion of total
3 residential and business customer gas sales going to
4 income-qualified households. For purposes of this Section,
5 households at or below 80% of area median income are
6 income-qualified. At least 80% of spending on measures in
7 programs targeted at income-qualified households shall be
8 delivered through whole building weatherization programs
9 and spent on measures that reduce space heating needs
10 through improvements to the building envelope, heating
11 distribution systems, or heating controls. The utilities
12 shall invest in health and safety measures appropriate and
13 necessary for comprehensively weatherizing the homes and
14 multifamily buildings of income-qualified households, with
15 up to 15% of income-qualified program spending made
16 available for such purposes. The ratio of spending on
17 efficiency programs targeted at multifamily buildings of
18 income-qualified households to spending on energy
19 efficiency programs targeted at single-family buildings of
20 income-qualified households shall be designed to achieve
21 levels of savings from each building type that are
22 approximately proportional to the magnitude of
23 cost-effective lifetime savings potential in each building
24 type. The gas utilities shall participate in a Low-Income
25 Energy Efficiency Accountability Committee as established
26 in Section 8-103B.

1 Gas utilities must conduct customer outreach and
2 education efforts in equity investment eligible
3 communities in order to provide notice of and explanations
4 concerning the following types of programs:

5 (A) energy efficiency programs, the Illinois Solar
6 for All Program, and whole home retrofit programs that
7 reduce natural gas usage;

8 (B) income-qualified financial assistance
9 programs, including rebate programs from the federal
10 government; and

11 (C) general education programs designed to explain
12 utility bills and the decisions customers can make to
13 lower energy usage.

14 These outreach and education efforts must be brought
15 to communities in a diversity of ways, must be created
16 with input from members of the communities, and must be
17 provided through, among other things:

18 (i) information on customers' bills in the main
19 languages spoken in the communities;

20 (ii) a quarterly posting in local newspapers that
21 cover the service area;

22 (iii) a dedicated section on the investor-owned
23 utility's website; and

24 (iv) in-person and virtual educational sessions
25 that take place in the income-qualified and Justice40
26 community, provide food and child care for

1 participating customers, and are codesigned with
2 interested community-based organization
3 representatives.

4 (6) Implementation of energy efficiency measures and
5 programs targeted at income-qualified households shall be
6 contracted, when practicable, to independent third parties
7 that have demonstrated the capability of serving those
8 households, with a preference for not-for-profit entities
9 and government agencies that have existing relationships
10 with, experience serving, or working directly within and
11 alongside income-qualified communities in the State. Each
12 gas utility shall develop and implement reporting
13 procedures that address and assist in determining the
14 amount of energy savings that can be applied to the
15 income-qualified procurement and expenditure requirements
16 set forth in this paragraph.

17 (7) A minimum of 10% of the utility's entire portfolio
18 funding level for a given year shall be used to procure
19 cost-effective energy efficiency measures from units of
20 local government, municipal corporations, school
21 districts, public housing, community college districts,
22 and nonprofit-owned buildings as long as a minimum
23 percentage of available funds shall be used to procure
24 energy efficiency from public housing, which percentage
25 shall be, at a minimum, equal to public housing's share of
26 public building energy consumption. Spending on public

1 housing may count toward minimum spending requirements on
2 efficiency improvements for income-qualified households.

3 (e) Notwithstanding any other provision of law, a utility
4 providing approved energy efficiency measures in the State may
5 recover all reasonable and prudently incurred costs of those
6 measures from its retail customers. However, nothing in this
7 subsection permits the double recovery of such costs from
8 customers.

9 (f) Beginning in 2024, each gas utility shall file an
10 energy efficiency plan with the Commission to meet the energy
11 efficiency standards in subsection (d) for the next applicable
12 multiyear period beginning January 1 of the year following the
13 filing, according to the schedule set forth in paragraphs (1)
14 through (4). If a utility does not file such a plan on or
15 before the applicable filing deadline for the plan, the
16 utility shall be liable for a civil penalty of \$100,000 per day
17 until the plan is filed.

18 (1) No later than 120 days after the effective date of
19 this amendatory Act of the 104th General Assembly, each
20 gas utility shall file an energy efficiency plan to
21 supersede its previously filed energy efficiency plan for
22 calendar year 2025 that is designed to achieve through
23 implementation of energy efficiency measures the
24 incremental annual savings goals, minimum average savings
25 life, and other requirements specified in paragraphs (1)
26 through (7) of subsection (d). An energy efficiency plan

1 submitted by a gas utility under this paragraph supersedes
2 any energy efficiency plan previously filed by the gas
3 utility for calendar year 2025.

4 (2) No later than March 1, 2025, each gas utility
5 shall file a 4-year energy efficiency plan that takes
6 effect on January 1, 2026 and is designed to achieve,
7 through implementation of emergency efficiency measures,
8 the incremental annual savings goals, minimum average
9 savings life, and other requirements specified in
10 paragraphs (1) through (7) of subsection (d). However, the
11 incremental annual savings goals may be reduced if the
12 plan's analysis and forecasts of the utility's ability to
13 acquire energy savings demonstrate by clear and convincing
14 evidence and through independent analysis that achievement
15 of such goals is not cost-effective. In no event may
16 incremental annual savings goals for any year be reduced
17 to levels below (i) those actually achieved in calendar
18 year 2024, (ii) those forecast to be achieved in calendar
19 year 2025, or (iii) 0.75% of sales. The Commission shall
20 review any proposed goal reduction as part of its review
21 and approval of the utility's proposed plan.

22 (3) Beginning in 2029 and every 4 years thereafter,
23 each gas utility shall file by no later than March 1 of the
24 applicable year, a 4-year energy efficiency plan that
25 takes effect on the following January 1 and is designed to
26 achieve, through implementation of energy efficiency

1 measures, the incremental annual savings goals, minimum
2 average savings life, and other requirements specified in
3 paragraphs (1) through (7) of subsection (d). However, the
4 incremental annual savings goals may be reduced if the
5 plan's analysis and forecasts of the utility's ability to
6 acquire energy savings demonstrate by clear and convincing
7 evidence and through independent analysis that achievement
8 of such goals is not cost-effective. In no event may
9 incremental annual savings goals for any year be reduced
10 to levels below (i) those actually achieved in the
11 calendar year before the plan filing, (ii) those forecast
12 to be achieved in the calendar year in which the plan
13 filing is made, or (iii) 0.75% of sales. The Commission
14 shall review any proposed goal reduction as part of its
15 review and approval of the utility's proposed plan.

16 (4) Each utility's plan shall set forth the utility's
17 proposals to meet the energy efficiency standards
18 identified in subsection (d). The Commission shall seek
19 public comment on each plan that takes effect on January
20 1, 2024 and before January 1, 2026 and shall issue an order
21 approving or disapproving the plan no later than November
22 30, 2023, or 225 days after the effective date of this
23 amendatory Act of the 104th General Assembly, whichever is
24 later. The Commission shall seek public comment on each
25 plan that takes effect on January 1, 2026 and shall issue
26 an order approving or disapproving the plan within 6

1 months after its submission. If the Commission disapproves
2 a plan, the Commission shall, within 30 days, describe in
3 detail the reasons for the disapproval and describe a path
4 by which the utility may file a revised draft of the plan
5 to address the Commission's concerns satisfactorily. If
6 the utility does not refile with the Commission within 60
7 days, the utility shall be subject to civil penalties at a
8 rate of \$100,000 per day until the plan is refiled. This
9 process shall continue, and penalties shall accrue, until
10 the utility has successfully filed a portfolio of energy
11 efficiency measures. Penalties shall be deposited into the
12 Energy Efficiency Trust Fund.

13 (g) In submitting proposed plans and funding levels under
14 subsection (f) to meet the savings goals identified in
15 subsection (d), the utility shall:

16 (1) demonstrate that its proposed energy efficiency
17 measures will achieve the requirements that are identified
18 in subsection (d);

19 (2) demonstrate consideration of program options for
20 supporting efforts to improve compliance with new building
21 codes, appliance standards, and municipal regulations as
22 potentially cost-effective means of acquiring energy
23 savings to count toward energy savings goals;

24 (3) demonstrate that its overall portfolio of measures
25 and programs, not including income-qualified programs
26 described in subsection (d), is cost-effective using the

1 total resource cost test and represents a diverse cross
2 section of opportunities for customers of all rate classes
3 to participate in programs. Individual measures need not
4 be cost-effective;

5 (4) demonstrate that the utility's plan integrates the
6 delivery of energy efficiency programs with electric
7 efficiency programs, programs promoting demand response,
8 and other efforts to address bill payment issues,
9 including, but not limited to, the Low Income Home Energy
10 Assistance Program and the Percentage of Income Payment
11 Plans;

12 (5) include a proposed or revised cost-recovery
13 mechanism to fund the proposed energy efficiency measures
14 and ensure the recovery of the prudently and reasonably
15 incurred costs of Commission-approved programs;

16 (6) provide, using not more than 3% of portfolio
17 resources in any given year, an annual independent
18 evaluation of the performance and cost-effectiveness of
19 the utility's portfolio of measures and programs;

20 (7) demonstrate how it will ensure that program
21 implementation contractors and energy efficiency
22 installation vendors will promote workforce equity and
23 quality jobs. Utilities shall collect, and make publicly
24 available at least quarterly, data necessary to
25 demonstrate how efforts are advancing workforce equity.
26 Utilities shall work with relevant vendors providing

1 education, training, and other resources needed to ensure
2 compliance and, where necessary, adjusting or terminating
3 work with vendors that cannot assist with compliance; and

4 (8) include any plans for research, development, or
5 pilot deployment of new measures or program approaches.

6 For utilities with unmodified savings goals, no more than
7 4% of energy efficiency portfolio spending may be

8 allocated for such purposes. For utilities with modified
9 savings goals, no more than 2% of energy efficiency

10 portfolio spending may be allocated for such purposes.

11 Utilities shall work with interested stakeholders to
12 formulate a plan for how any proposed funds should be

13 spent, incorporate statewide approaches for these
14 allocations whenever such approaches would be more

15 effective or cost-efficient, and demonstrate such
16 collaboration in the utilities' plans.

17 (h) Each gas utility shall be eligible to earn a
18 shareholder incentive for effective implementation of its

19 efficiency programs. The incentive shall be tied to each
20 utility's annual energy efficiency spending and its savings.

21 There shall be no incentive if the independent evaluator
22 determines the utility either (i) failed to achieve the

23 minimum average savings life specified in paragraph (2) of
24 subsection (d), (ii) did not fully meet all of the

25 requirements specified in paragraphs (3) through (7) of
26 subsection (d), or (iii) failed to achieve incremental annual

1 savings equal to at least 90% of the incremental savings goal
2 specified in paragraph (1) of subsection (d). If a utility
3 meets all of the requirements specified in paragraphs (2)
4 through (7) of subsection (d), it can earn an incentive equal
5 0.5% of total annual efficiency spending in the year being
6 evaluated for every one percentage point above 90% of its
7 incremental annual savings goal that it achieves for that
8 year, with a maximum incentive of 15% for achieving 120% of its
9 incremental annual savings goal.

10 (i) The utility shall submit energy savings data to the
11 independent evaluator no later than 30 days after the close of
12 the plan year. The independent evaluator shall determine the
13 incremental annual savings and average savings life, as well
14 as an estimate of the job impacts and other macroeconomic
15 impacts of the efficiency programs for that year, achieved no
16 later than 120 days after the close of the plan year. The
17 utility shall submit an informational filing to the Commission
18 no later than 160 days after the close of the plan year that
19 attaches the independent evaluator's final report identifying
20 the incremental annual savings for the year, identifying
21 average savings life for the year, documenting compliance with
22 other requirements in subsection (d), and, as applicable, the
23 magnitude of any shareholder incentive which the utility has
24 earned.

25 (j) Gas utilities shall report annually to the Commission
26 and General Assembly on how hiring, contracting, job training,

1 and other practices related to its energy efficiency programs
2 enhance the diversity of vendors working on such programs.
3 These reports must include data on vendor and employee
4 diversity.

5 (k) The independent evaluator shall follow the guidelines
6 and use the savings set forth in Commission-approved energy
7 efficiency policy manuals and technical reference manuals, as
8 each may be updated from time to time. Until measure life
9 values for energy efficiency measures implemented for
10 income-qualified households are separately incorporated into
11 such Commission-approved manuals, the income-qualified
12 measures shall have the same measure life values that are
13 established for the same measures implemented in households
14 that are not income-qualified households.

15 (220 ILCS 5/9-228.5 new)

16 Sec. 9-228.5. Consideration of gas main and gas service
17 extension costs. Gas main and gas service extension policies
18 shall be based on the principle that the full incremental cost
19 associated with new development and growth shall be borne by
20 the customers that cause those incremental costs. Gas main and
21 gas service extension policies, procedures, and conditions
22 shall align with the greenhouse gas emission reduction goals
23 established in Article XXIV.

24 (220 ILCS 5/9-229)

1 Sec. 9-229. Consideration of attorney and expert
2 compensation as an expense and intervenor compensation fund.

3 (a) The Commission shall specifically assess the justness
4 and reasonableness of any amount expended by a public utility
5 to compensate attorneys or technical experts to prepare and
6 litigate a general rate case filing. This issue shall be
7 expressly addressed in the Commission's final order.

8 (b) The State of Illinois shall create a Consumer
9 Intervenor Compensation Fund subject to the following:

10 (1) Provision of compensation for Consumer Interest
11 Representatives that intervene in Illinois Commerce
12 Commission proceedings will increase public engagement,
13 encourage additional transparency, expand the information
14 available to the Commission, and improve decision-making.

15 (2) As used in this Section, "consumer ~~Consumer~~
16 interest representative" means:

17 (A) a residential utility customer or group of
18 residential utility customers represented by a
19 not-for-profit group or organization registered with
20 the Illinois Attorney General under the Solicitation
21 for Charity Act;

22 (B) representatives of not-for-profit groups or
23 organizations whose membership is limited to
24 residential utility customers; or

25 (C) representatives of not-for-profit groups or
26 organizations whose membership includes Illinois

1 residents and that address the community, economic,
2 environmental, or social welfare of Illinois
3 residents, except government agencies or intervenors
4 specifically authorized by Illinois law to participate
5 in Commission proceedings on behalf of Illinois
6 consumers.

7 (3) A consumer interest representative is eligible to
8 receive compensation from the consumer intervenor
9 compensation fund if its participation included lay or
10 expert testimony or legal briefing and argument concerning
11 the expenses, investments, rate design, rate impact, or
12 other matters affecting the pricing, rates, costs or other
13 charges associated with utility service, ~~the Commission~~
14 ~~adopts a material recommendation related to a significant~~
15 ~~issue in the docket,~~ and participation caused a
16 significant financial cost ~~hardship~~ to the participant;
17 however, no consumer interest representative shall be
18 eligible to receive an award pursuant to this Section if
19 the consumer interest representative receives any
20 compensation, funding, or donations, directly or
21 indirectly, from parties that have a financial interest in
22 the outcome of the proceeding.

23 (4) Within 30 days after September 15, 2021 (the
24 effective date of Public Act 102-662), each utility that
25 files a request for an increase in rates under Article IX
26 or Article XVI shall deposit an amount equal to one half of

1 the rate case attorney and expert expense allowed by the
2 Commission, but not to exceed \$500,000, into the fund
3 within 35 days of the date of the Commission's Final ~~final~~
4 Order in the rate case or 20 days after the denial of
5 rehearing under Section 10-113 of this Act, whichever is
6 later. The Consumer Intervenor Compensation Fund shall be
7 used to provide payment to consumer interest
8 representatives as described in this Section.

9 (5) An electric public utility with 3,000,000 or more
10 retail customers shall contribute \$450,000 to the Consumer
11 Intervenor Compensation Fund within 60 days after
12 September 15, 2021 (the effective date of Public Act
13 102-662). A combined electric and gas public utility
14 serving fewer than 3,000,000 but more than 500,000 retail
15 customers shall contribute \$225,000 to the Consumer
16 Intervenor Compensation Fund within 60 days after
17 September 15, 2021 (the effective date of Public Act
18 102-662). A gas public utility with 1,500,000 or more
19 retail customers that is not a combined electric and gas
20 public utility shall contribute \$225,000 to the Consumer
21 Intervenor Compensation Fund within 60 days after
22 September 15, 2021 (the effective date of Public Act
23 102-662). A gas public utility with fewer than 1,500,000
24 retail customers but more than 300,000 retail customers
25 that is not a combined electric and gas public utility
26 shall contribute \$80,000 to the Consumer Intervenor

1 Compensation Fund within 60 days after September 15, 2021
2 (the effective date of Public Act 102-662). A gas public
3 utility with fewer than 300,000 retail customers that is
4 not a combined electric and gas public utility shall
5 contribute \$20,000 to the Consumer Intervenor Compensation
6 Fund within 60 days after September 15, 2021 (the
7 effective date of Public Act 102-662). A combined electric
8 and gas public utility serving fewer than 500,000 retail
9 customers shall contribute \$20,000 to the Consumer
10 Intervenor Compensation Fund within 60 days after
11 September 15, 2021 (the effective date of Public Act
12 102-662). A water or sewer public utility serving more
13 than 100,000 retail customers shall contribute \$80,000,
14 and a water or sewer public utility serving fewer than
15 100,000 but more than 10,000 retail customers shall
16 contribute \$20,000.

17 (6) (A) Prior to the entry of a Final Order in a
18 docketed case, the Commission Administrator shall provide
19 a payment to a consumer interest representative that
20 demonstrates through a verified application for funding
21 that the consumer interest representative's participation
22 or intervention without an award of fees or costs imposes
23 a significant financial hardship based on a schedule to be
24 developed by the Commission. The Administrator may require
25 verification of costs incurred, including statements of
26 hours spent, as a condition to paying the consumer

1 interest representative prior to the entry of a Final
2 Order in a docketed case.

3 (B) If ~~the Commission adopts a material recommendation~~
4 ~~related to a significant issue in the docket and~~
5 participation caused a significant financial cost hardship
6 to the participant, then the consumer interest
7 representative shall be allowed payment for some or all of
8 the consumer interest representative's reasonable
9 attorney's or advocate's fees, reasonable expert witness
10 fees, and other reasonable costs of preparation for and
11 participation in a hearing or proceeding. Expenses related
12 to travel or meals shall not be compensable.

13 (C) The consumer interest representative shall submit
14 an itemized request for compensation to the Consumer
15 Intervenor Compensation Fund, including the advocate's or
16 attorney's reasonable fee rate, the number of hours
17 expended, reasonable expert and expert witness fees, and
18 other reasonable costs for the preparation for and
19 participation in the hearing and briefing within 30 days
20 of the Commission's final order after denial or decision
21 on rehearing, if any.

22 (7) Administration of the Fund.

23 (A) The Consumer Intervenor Compensation Fund is
24 created as a special fund in the State treasury. All
25 disbursements from the Consumer Intervenor Compensation
26 Fund shall be made only upon warrants of the Comptroller

1 drawn upon the Treasurer as custodian of the Fund upon
2 vouchers signed by the Executive Director of the
3 Commission or by the person or persons designated by the
4 Director for that purpose. The Comptroller is authorized
5 to draw the warrant upon vouchers so signed. The Treasurer
6 shall accept all warrants so signed and shall be released
7 from liability for all payments made on those warrants.
8 The Consumer Intervenor Compensation Fund shall be
9 administered by an Administrator that is a person or
10 entity that is independent of the Commission. The
11 administrator will be responsible for the prudent
12 management of the Consumer Intervenor Compensation Fund
13 and for recommendations for the award of consumer
14 intervenor compensation from the Consumer Intervenor
15 Compensation Fund. The Commission shall issue a request
16 for qualifications for a third-party program administrator
17 to administer the Consumer Intervenor Compensation Fund.
18 The third-party administrator shall be chosen through a
19 competitive bid process based on selection criteria and
20 requirements developed by the Commission. The Illinois
21 Procurement Code does not apply to the hiring or payment
22 of the Administrator. All Administrator costs may be paid
23 for using monies from the Consumer Intervenor Compensation
24 Fund, but the Program Administrator shall strive to
25 minimize costs in the implementation of the program.

26 (B) The computation of compensation awarded from the

1 fund shall take into consideration the market rates paid
2 to persons of comparable training and experience who offer
3 similar services, but may not exceed the comparable market
4 rate for services paid by the public utility as part of its
5 rate case expense.

6 (C) (1) Recommendations on the award of compensation by
7 the administrator shall include consideration of whether
8 the participation raised ~~Commission adopted~~ a ~~material~~
9 recommendation related to a significant issue in the
10 docket and whether participation caused a significant
11 financial cost hardship to the participant and the payment
12 of compensation is fair, just, and reasonable.

13 (2) Recommendations on the award of compensation by
14 the administrator shall be submitted to the Commission for
15 approval. Unless the Commission initiates an investigation
16 within 45 days after the notice to the Commission, the
17 award of compensation shall be allowed 45 days after
18 notice to the Commission. Such notice shall be given by
19 filing with the Commission on the Commission's e-docket
20 system, and keeping open for public inspection the award
21 for compensation proposed by the Administrator. The
22 Commission shall have power, and it is hereby given
23 authority, either upon complaint or upon its own
24 initiative without complaint, at once, and if it so
25 orders, without answer or other formal pleadings, but upon
26 reasonable notice, to enter upon a hearing concerning the

1 propriety of the award.

2 (c) The Commission may adopt rules to implement this
3 Section.

4 (Source: P.A. 102-662, eff. 9-15-21; 103-605, eff. 7-1-24.)

5 (220 ILCS 5/9-235 new)

6 Sec. 9-235. Tariffed gas main and gas service extension
7 provisions. No later than 60 days after the effective date of
8 this amendatory Act of the 104th General Assembly, the
9 Commission shall initiate a docketed rulemaking reviewing each
10 gas public utility tariff that provides for gas main and gas
11 service extensions without additional charge to new customers
12 in excess of the default extensions without charge as
13 specified in 83 Ill. Adm. Code 501. The focus of the rulemaking
14 shall be to modify each gas utility's gas main and gas service
15 extension tariff to align with the provisions set forth in
16 Section 9-228.5.

17 (220 ILCS 5/9-241) (from Ch. 111 2/3, par. 9-241)

18 Sec. 9-241. Nondiscrimination.

19 (a) No public utility shall, as to rates or other charges,
20 services, facilities, or in other respect, make or grant any
21 preference or advantage to any corporation or person or
22 subject any corporation or person to any prejudice or
23 disadvantage. No public utility shall establish or maintain
24 any unreasonable difference as to rates or other charges,

1 services, facilities, or in any other respect, either as
2 between localities or as between classes of service.

3 (b) An electric utility in a county with a population of
4 3,000,000 or more shall not establish or maintain any
5 unreasonable difference as to rates or other charges,
6 services, contractual terms, or facilities for access to or
7 the use of its utility infrastructure by another person or for
8 any other purpose. Notwithstanding any other provision of law,
9 the Commission and its staff shall interpret this Section in
10 accordance with Article XVI of this Act.

11 (c) Nothing in this Section shall be construed as
12 limiting the authority of the Commission to permit the
13 establishment of economic development rates as incentives to
14 economic development either in enterprise zones as designated
15 by the State of Illinois or in other areas of a utility's
16 service area. Such rates should be available to existing
17 businesses which demonstrate an increase to existing load as
18 well as new businesses which create new load for a utility so
19 as to create a more balanced utilization of generating
20 capacity. The Commission shall ensure that such rates are
21 established at a level which provides a net benefit to
22 customers within a public utility's service area.

23 (d) On or before January 1, 2025 ~~2023~~, the Commission
24 shall conduct a comprehensive study to assess whether
25 low-income discount rates for electric and natural gas
26 residential customers are appropriate and the potential design

1 and implementation of any such rates. The Commission shall
2 include its findings, together with the appropriate
3 recommendations, in a report to be provided to the General
4 Assembly. Upon completion of the study, the Commission shall
5 have the authority to permit or require electric and natural
6 gas utilities to file a tariff establishing low-income
7 discount rates.

8 Such study shall assess, at a minimum, the following:

9 (1) customer eligibility requirements, including
10 income-based eligibility and eligibility based on
11 participation in or eligibility for certain public
12 assistance programs;

13 (2) appropriate rate structures, including
14 consideration of tiered discounts for different income
15 levels;

16 (3) appropriate recovery mechanisms, including the
17 consideration of volumetric charges and customer charges;

18 (4) appropriate verification mechanisms;

19 (5) measures to ensure customer confidentiality and
20 data safeguards;

21 (6) outreach and consumer education procedures; and

22 (7) the impact that a low-income discount rate would
23 have on the affordability of delivery service to
24 low-income customers and customers overall.

25 On or before January 1, 2026, the Commission shall begin a
26 docketed rulemaking process to implement low-income discount

1 rates for electric and natural gas residential customers,
2 incorporating the recommendations of the report required by
3 this Section, released by the Commission in December 2022 and
4 titled the "Illinois Commerce Commission Low-Income Discount
5 Rate Study Report to the Illinois General Assembly".

6 (e) The Commission shall adopt rules requiring utility
7 companies to produce information, in the form of a mailing,
8 and other approved methods of distribution, to its consumers,
9 to inform the consumers of available rebates, discounts,
10 credits, and other cost-saving mechanisms that can help them
11 lower their monthly utility bills, and send out such
12 information semi-annually, unless otherwise provided by this
13 Article.

14 (f) Prior to October 1, 1989, no public utility providing
15 electrical or gas service shall consider the use of solar or
16 other nonconventional renewable sources of energy by a
17 customer as a basis for establishing higher rates or charges
18 for any service or commodity sold to such customer; nor shall a
19 public utility subject any customer utilizing such energy
20 source or sources to any other prejudice or disadvantage on
21 account of such use. No public utility shall without the
22 consent of the Commission, charge or receive any greater
23 compensation in the aggregate for a lesser commodity, product,
24 or service than for a greater commodity, product or service of
25 like character.

26 The Commission, in order to expedite the determination of

1 rate questions, or to avoid unnecessary and unreasonable
2 expense, or to avoid unjust or unreasonable discrimination
3 between classes of customers, or, whenever in the judgment of
4 the Commission public interest so requires, may, for rate
5 making and accounting purposes, or either of them, consider
6 one or more municipalities either with or without the adjacent
7 or intervening rural territory as a regional unit where the
8 same public utility serves such region under substantially
9 similar conditions, and may within such region prescribe
10 uniform rates for consumers or patrons of the same class.

11 Any public utility, with the consent and approval of the
12 Commission, may as a basis for the determination of the
13 charges made by it classify its service according to the
14 amount used, the time when used, the purpose for which used,
15 and other relevant factors.

16 (Source: P.A. 102-662, eff. 9-15-21; 103-679, eff. 7-19-24.)

17 (220 ILCS 5/9-254 new)

18 Sec. 9-254. Independent gas system assessment.

19 (a) The General Assembly finds that an independent audit
20 of the current state of the gas distribution system, and of the
21 expenditures made since 2012, will need to be made.
22 Specifically, the General Assembly finds:

23 (1) Pursuant to 2013 legislation establishing the
24 qualifying infrastructure plant charge, gas utilities in
25 this State that serve over 700,000 retail customers have

1 spent significant amounts of ratepayer dollars on system
2 investments purporting to refurbish, rebuild, modernize,
3 and expand gas system infrastructure.

4 (2) The qualifying infrastructure plant charge is set
5 to conclude at its statutory deadline of December 31,
6 2023, and it is in the interest of this State and in the
7 interest of gas utilities' customers to understand the
8 benefits of these investments to the gas system and to
9 customers and to evaluate the current condition of the gas
10 system.

11 (3) It is also necessary for gas utilities, the
12 Commission, and stakeholders to have an independently
13 verified set of data to draw upon for future gas rate cases
14 and any other proposed gas system spending.

15 (4) Meeting the State's climate goals will require an
16 ordered transition away from gas, and toward electric
17 heating and appliances, for all or nearly all buildings,
18 and planning this transition will require a thorough
19 understanding of the current state of the gas system.

20 (5) The Commission has authority to order and
21 implement the requirements of this Section under Section
22 8-102.

23 (b) Terms used in this Section shall have the meanings
24 given to them in Section 19-105.

25 (c) Within 30 days after the effective date of this
26 amendatory Act of the 104th General Assembly, the Commission

1 shall issue an order initiating an audit of each gas utility
2 servicing over 700,000 retail customers in the State, which
3 shall examine the following:

4 (1) An assessment of the gas distribution system, as
5 described in paragraph (2) of subsection (a). The
6 Commission shall have the authority to require additional
7 items that it deems necessary.

8 (2) An analysis of the utility's capital projects
9 placed into service in the preceding 10 years, including,
10 but not limited to, an assessment of the value and safety
11 impact of pipe replacement, increased system pressure, and
12 pipe capacity expansion.

13 (3) An assessment of the utility's emissions
14 reductions to date and what preparations the utility has
15 made to meet the terms of the Paris Climate Agreement,
16 with which it is the policy of the State to comply.

17 (4) The creation of a visual, geographic map of the
18 gas system displaying the level of risk of various
19 pipelines and showing the areas where pipelines have
20 already been replaced.

21 (5) The identifying areas of the gas system where the
22 cost to replace pipeline is likely to be high, including,
23 but not limited to, identifying places where
24 decommissioning a portion of the gas system and planning
25 to provide for electric heating and appliance needs in
26 that area may be preferable, considering the costs and

1 benefits for affordability, health, and climate.

2 (d) It is contemplated that the auditor will use materials
3 filed with the Commission by the utilities with respect to the
4 auditor's expenditures in the preceding 10 years; however, the
5 auditor may also, with Commission approval, assess other
6 information deemed necessary to make its report. The results
7 of the audit described in this Section shall be reflected in a
8 report delivered to the Commission, describing the information
9 specified in this Section. The report is to be delivered no
10 later than 180 days after the Commission enters its order
11 under subsection (c). It is understood that any public report
12 may not contain items that are confidential or proprietary.

13 (e) The costs of a gas utility's audit described in this
14 Section shall not exceed \$500,000 and shall be paid for by the
15 electric utility that is the subject of the audit. Such costs
16 shall be a recoverable expense.

17 (f) The Commission shall have the authority to retain the
18 services of an auditor to assist with the distribution
19 planning process, as well as in docketed proceedings. Such
20 expenses for these activities shall also be borne by the
21 Commission.

22 (220 ILCS 5/9-255 new)

23 Sec. 9-255. Phase-out of gas fixed charges. Beginning
24 January 1, 2035, a public utility providing gas service may
25 not assess fixed charges as part of its rates. Beginning

1 January 1, 2030, a public utility providing gas service must
2 limit, for each customer class, any fixed charges in its rates
3 to no greater than 50% of the average of monthly fixed charges
4 for that customer class during the period January 1, 2019 to
5 December 31, 2021.

6 (220 ILCS 5/16-111.10)

7 Sec. 16-111.10. Equitable Energy Upgrade Program.

8 (a) The General Assembly finds and declares that Illinois
9 homes and businesses can contribute to the creation of a clean
10 energy economy, conservation of natural resources, and
11 reliability of the electricity grid through the installation
12 of cost-effective renewable energy generation, energy
13 efficiency and demand response equipment, and energy storage
14 systems. Further, a large portion of Illinois residents and
15 businesses that would benefit from the installation of energy
16 efficiency, storage, and renewable energy generation systems
17 are unable to purchase systems due to capital or credit
18 barriers. This State should pursue options to enable many more
19 Illinoisans to access the health, environmental, and financial
20 benefits of new clean energy technology.

21 (b) As used in this Section:

22 "Commission" means the Illinois Commerce Commission.

23 "Energy project" means renewable energy generation
24 systems, including solar projects, energy efficiency upgrades,
25 decarbonization and electrification measures, energy storage

1 systems, demand response equipment, or any combination
2 thereof.

3 "Fund" means the Clean Energy Jobs and Justice Fund
4 established in the Clean Energy Jobs and Justice Fund Act.

5 "Program" means the Equitable Energy Upgrade Program
6 established under subsection (c).

7 "Utility" means electric public utilities providing
8 services to 500,000 or more customers under this Act.

9 (c) The Commission shall open an investigation into and
10 direct all electric and gas public utilities in this State to
11 adopt an Equitable Energy Upgrade Program that permits
12 customers to finance the construction of energy projects
13 through an optional tariff payable directly through their
14 utility bill, modeled after the Pay As You Save system,
15 developed by the Energy Efficiency Institute. The Program
16 model shall enable utilities to offer to make investments in
17 energy projects to customer properties with low-cost capital
18 and use an opt-in tariff to recover the costs. The Program
19 shall be designed to provide customers with immediate
20 financial savings if they choose to participate. The Program
21 shall allow residential electric and gas utility customers
22 that own the property, or renters that have permission of the
23 property owner, for which they subscribe to utility service to
24 agree to the installation of an energy project. The Program
25 shall ensure:

26 (1) eligible projects do not require upfront payments;

1 however, customers may pay down the costs for projects
2 with a payment to the installing contractor in order to
3 qualify projects that would otherwise require upfront
4 payments;

5 (2) eligible projects have sufficient estimated
6 savings and estimated life span to produce significant,
7 immediate net savings;

8 (3) participants shall agree the utility can recover
9 its costs for the projects at their location by paying for
10 the project through an optional tariff directly through
11 the participant's utility ~~electricity~~ bill, allowing
12 participants to benefit from installation of energy
13 projects without traditional loans;

14 (4) accessibility by lower-income residents and
15 environmental justice community residents; ~~and~~

16 (5) the utility must ensure that customers who are
17 interested in participating are notified that if they are
18 income qualified, they may also be eligible for the
19 Percentage of Income Payment Plan program and free energy
20 improvements through other programs and facilitate
21 interested customers' enrollment in those programs; and
22 ~~provide contact information.~~

23 (6) coordination with existing utility, state, and
24 federal energy efficiency, solar, electrification, and
25 other energy savings funding and implementation programs.

26 (d) The Commission shall establish Program guidelines with

1 the anticipated schedule of Program availability as follows:

2 (1) Year 1: Beginning in the first year of operation,
3 each utility with greater than 100,000 retail customers is
4 required to obtain low-cost capital of at least
5 \$20,000,000 annually for investments in energy projects.

6 (2) Year 2: Beginning in the second year of operation,
7 each utility with greater than 100,000 retail customers is
8 required to obtain low-cost capital for investments in
9 energy projects of at least \$40,000,000 annually.

10 (3) Year 3: Beginning in the third year of operation,
11 each utility with greater than 100,000 retail customers is
12 required to obtain low-cost capital for investments in as
13 many systems as customers demand, subject to available
14 capital provided by the utility, State, or other lenders.

15 (e) In the design of the Program, the Commission shall:

16 (1) Within 90 days after the effective date of this
17 amendatory Act of the 104th General Assembly, begin a
18 process to update the Program guidelines for
19 implementation of the Program. Any such process shall
20 allow for participation from interested stakeholders.
21 ~~Within 270 days after the effective date of this~~
22 ~~amendatory Act of the 102nd General Assembly, convene a~~
23 ~~workshop during which interested participants may discuss~~
24 ~~issues and submit comments related to the Program.~~

25 (2) Establish Program guidelines for implementation of
26 the Program in accordance with the Pay As You Save

1 Essential Elements and Minimum Program Requirements that
2 electric and gas utilities must abide by when implementing
3 the Program. Program guidelines established by the
4 Commission shall include the following elements:

5 (A) The Commission shall establish conditions
6 under which utilities secure capital to fund the
7 energy projects. The Commission may allow utilities to
8 raise capital independently, work with third-party
9 lenders to secure the capital for participants, or a
10 combination thereof. Any process the Commission
11 approves must use a market mechanism to identify the
12 least costly sources of capital funds so as to pass on
13 maximum savings to participants. The State or the
14 Clean Energy Jobs and Justice Fund may also provide
15 capital for the Program.

16 (B) Customer protection guidelines should be
17 designed consistent with Pay As You Save Essential
18 Elements and Minimum Program Requirements.

19 (C) The Commission shall establish conditions by
20 which utilities may connect Program participants to
21 energy project vendors. In setting conditions for
22 connection, the Commission may prioritize vendors that
23 have a history of good relations with the State,
24 including vendors that have hired participants from
25 State-created job training programs.

26 (D) Guarantee that conservative estimates of

1 financial savings will immediately and significantly
2 exceed estimated Program costs for Program
3 participants.

4 (E) Require any customer data sharing between
5 electric and gas utilities and third-party vendors
6 needed to evaluate the energy and demand saving and
7 energy services revenue opportunities of all customers
8 and otherwise facilitate a positive customer
9 experience. Such data sharing may include but shall
10 not be limited to historical and ongoing customer
11 usage data and billing rates. The Commission may allow
12 utilities to recover the costs associated with data
13 sharing from all customers.

14 (F) Notwithstanding the method used to estimate
15 site-specific energy savings or measure direct energy
16 savings for Program participants, the utility will
17 report aggregate savings to the Commission for
18 regulatory filings in the same or a similar manner as
19 other energy efficiency or clean energy programs.

20 (f) Within 90 ~~120~~ days after the Commission releases the
21 Program conditions established under this Section, each
22 utility subject to the requirements of this Section shall
23 submit an informational filing to the Commission that
24 describes its plan for implementing the provisions of this
25 Section. If the Commission finds that the submission does not
26 properly comply with the statutory or regulatory requirements

1 of the Program, the Commission may require that the utility
2 make modifications to its filing.

3 (g) An independent process evaluation shall be conducted
4 after one year of the Program's operation. An independent
5 impact evaluation shall be conducted after 3 years of
6 operation, excluding one-time startup costs and results from
7 the first 12 months of the Program. The Commission shall
8 convene an advisory council of stakeholders, including
9 representation of low-income and environmental justice
10 community members to make recommendations in response to the
11 findings of the independent evaluation.

12 (h) The Program shall be designed using the Pay As You Save
13 system guidelines to be cost-effective for customers. Only
14 projects that are deemed to be cost-effective and can be
15 reasonably expected to ensure customer savings are eligible
16 for funding through the Program, unless, as specified in
17 paragraph (1) of subsection (c), customers able to make
18 upfront copayments to installers buy down the cost of projects
19 so it can be deemed cost-effective.

20 (i) Eligible customers must be:

21 (1) property renters with permission of the property
22 owner; or

23 (2) property owners.

24 (j) The calculation of project cost-effectiveness shall be
25 based upon the Pay As You Save system requirements.

26 (1) The calculation of cost-effectiveness must be

1 conducted by an objective process approved by the
2 Commission and based on rates in effect at the time of
3 installation.

4 (2) A project shall be considered cost-effective ~~only~~
5 if it is estimated to produce significant immediate net
6 savings, not counting copayments voluntarily made by
7 customers. The Commission may establish guidelines by
8 which this required savings is estimated.

9 (3) Net savings shall include savings across all fuel
10 sources, not limited to electricity and natural gas.

11 (4) The calculation of project cost-effectiveness
12 shall not exclude projects that:

13 (A) would raise customer costs in a particular
14 month so long as customers see annual project savings;
15 or

16 (B) increase electric load and accompanying costs
17 when a heating electrification project results in the
18 ability to cool part or all of a home that was not
19 previously cooled. In such cases, the increased
20 electricity consumption associated with that added
21 cooling shall not be included in calculations of net
22 savings. Extreme heat poses an increasing risk to
23 Illinois communities. As such, it is in the public
24 interest to mitigate that risk through the addition of
25 building cooling systems.

26 However, any expected increase in electric load and

1 customer costs should be clearly communicated to impacted
2 customers, along with any options for mitigating that
3 increase.

4 (k) The Program should be modeled after the Pay As You Save
5 system, by which Program participants finance energy projects
6 using the savings that the energy project creates with a
7 tariffed on-bill program. Eligible projects shall not create
8 personal debt for the customer, result in a lien in the event
9 of nonpayment, or require customers to pay monthly charges for
10 any upgrade that fails and is not repaired within 21 days. The
11 utility may restart charges once the upgrade is repaired and
12 functioning and extend the term of payments to recover its
13 costs for missed payments and deferred cost recovery,
14 providing the upgrade continues to function.

15 (l) Any energy project that is defective or damaged due to
16 no fault of the participant must be either replaced or
17 repaired with parts that meet industry standards at the cost
18 of the utility or vendor, as specified by the Commission, and
19 charges shall be suspended until repairs or replacement is
20 completed. The Commission may establish, increase, or replace
21 the requirements imposed in this subsection. The Commission
22 may determine that this responsibility is best handled by
23 participating project vendors in the form of insurance,
24 contractual guarantees, or other mechanisms, and issue rules
25 detailing this requirement. Customers shall not be charged
26 monthly payments for upgrades that are no longer functioning.

1 (m) In the event of nonpayment, the remaining balance due
2 to pay off the system shall remain with the utility meter at an
3 upgraded location. The Commission shall establish conditions
4 subject to this constraint in the event of nonpayment that are
5 in accordance with the Pay As You Save system.

6 (n) The utility shall make every effort to ensure that
7 customers who are income-qualified for free energy upgrade
8 programs take full advantage of those programs first before
9 using the Equitable Energy Upgrade Program. ~~If the demand by~~
10 ~~utility customers exceeds the Program capital supply in a~~
11 ~~given year, utilities shall ensure that 50% of participants~~
12 ~~are:~~

- 13 ~~(1) customers in neighborhoods where a majority of~~
14 ~~households make 150% or less of area median income; or~~
15 ~~(2) residents of environmental justice communities.~~

16 (o) Utilities shall endeavor to inform customers about the
17 availability of the Program, their potential eligibility for
18 participation in the Program, and whether they are likely to
19 save money on the basis of an estimate conducted using
20 variables consistent with the Program that the utility has at
21 its disposal. The Commission may establish guidelines by which
22 utilities must abide by this directive and alternatives if the
23 Commission deems utilities' efforts as inadequate.

24 (p) Subject to Commission specifications under subsection
25 (c), each utility shall work with certified project vendors
26 selected using a request for proposals process to establish

1 the terms and processes under which a utility can install
2 eligible renewable energy generation and energy storage
3 systems using the capital to fit the Equitable Energy Upgrade
4 model. The utility ~~certified project vendor~~ shall explain and
5 offer the approved upgrades to customers and shall assist
6 customers in applying for financing through the Program. As
7 part of the process, utilities ~~vendors~~ shall also provide
8 participants with information about any other relevant
9 incentives that may be available and customer service
10 regarding the effective use of the upgrades.

11 Nothing shall preclude gas and electric utilities that
12 have overlapping service territories from jointly implementing
13 and delivering the Program.

14 (q) A participating ~~An electric~~ utility shall recover all
15 of the prudently incurred costs of offering a program approved
16 by the Commission under this Section. For investor-owned
17 utilities, shareholder incentives will be proportional to
18 meeting Commission approved thresholds for the number of
19 customers served and the amount of its investments in those
20 locations.

21 (r) The Commission shall adopt all rules necessary for the
22 administration of this Section.

23 (Source: P.A. 102-662, eff. 9-15-21.)

24 (220 ILCS 5/Art. XXIII heading new)

25 ARTICLE XXIII. CLEAN BUILDING HEATING LAW

1 (220 ILCS 5/23-101 new)

2 Sec. 23-101. Short title. This Article may be cited as the
3 Clean Building Heating Law. References in this Article to
4 "this Act" mean this Article.

5 (220 ILCS 5/23-102 new)

6 Sec. 23-102. Findings. The General Assembly finds that the
7 adoption and use of clean, zero-pollution space and water
8 heating appliances in residential and commercial buildings
9 would benefit the State by (i) protecting the air that
10 Illinoisans breathe through reducing unhealthy levels of smog
11 and ozone, (ii) minimizing health risks associated with air
12 pollution, including respiratory ailments, cardiovascular
13 illnesses, and premature death, which are linked to exposure
14 to fine particulate matter and nitrogen dioxide, (iii)
15 assisting the State in achieving attainment of federal
16 National Ambient Air Quality Standards for ozone and meeting
17 the State's obligations under the federal Regional Haze Rule,
18 (iv) reducing climate pollution in service to the State's
19 net-zero greenhouse gas goals, and (v) contributing to the
20 State's economy through building and mobilizing a trained and
21 competitive workforce to install and maintain newly purchased
22 appliances.

23 (220 ILCS 5/23-103 new)

1 Sec. 23-103. Definitions. As used in this Article:

2 "Annual fuel utilization efficiency" or "AFUE" means the
3 efficiency as defined by Section 4.2.35 of the Code of Federal
4 Regulations, Title 10, Part 430, Subpart B, Appendix N.

5 "Boiler" or "water heater" means a product used to heat
6 water or produce steam and that is not exclusively used to
7 produce electricity for sale. "Boiler" does not include any
8 waste heat recovery boiler that is used to recover sensible
9 heat from the exhaust of a combustion turbine or any unfired
10 waste heat recovery boiler that is used to recover sensible
11 heat from the exhaust of any combustion equipment.

12 "Btu" means British thermal unit, which is a scientific
13 unit of measurement equal to the quantity of heat required to
14 raise the temperature of one pound of water by one degree
15 Fahrenheit at approximately 60 degrees Fahrenheit.

16 "Director" means the Director of the Environmental
17 Protection Agency or the Director's designee.

18 "Fan-type central furnace" means a self-contained space
19 heater providing for circulation of heated air at pressures
20 other than atmospheric through ducts more than 25 cm (10 in) in
21 length.

22 "Furnace" means a product designed to be a source of
23 interior space heating.

24 "Heat input" means the heat released by the combustion of
25 fuels in a unit based on the higher heating value of fuel,
26 excluding the enthalpy of incoming combustion air.

1 "Heat output" means the product obtained by multiplying
2 the recovery efficiency, as defined by Section 6.1.3 of the
3 Code of Federal Regulation, Title 10, Part 430, Subpart B,
4 Appendix E, by the input rating of the unit.

5 "NO_x" and "NO_x emissions" means the sum of nitric oxide and
6 nitrogen dioxide in the unit's flue gas, collectively
7 expressed as nitrogen dioxide.

8 "Rated heat input capacity" means the heat input capacity
9 specified on the nameplate of the combustion unit. If a unit
10 has been altered or modified such that its maximum heat input
11 is different from the heat input capacity specified on the
12 nameplate, the new maximum heat input is the unit's rated heat
13 input capacity.

14 "Useful heat delivered to the heated space" means the
15 annual fuel utilization efficiency (expressed as a fraction)
16 multiplied by the heat input.

17 (220 ILCS 5/23-104 new)

18 Sec. 23-104. Applicability. This Article applies to any
19 person who sells, installs, offers for sale, leases, or offers
20 for lease the following products in this State, as well as any
21 manufacturer who intends to sell or distribute for sale or
22 installation the following products in this State: (i) new
23 water heaters and boilers with a rated heat input capacity of
24 2,000,000 Btus per hour or less; and (ii) new furnaces with a
25 rated heat input capacity of 175,000 Btus per hour or less,

1 and, in the case of combination heating and cooling units, a
2 cooling rate of 65,000 Btus per hour or less.

3 (220 ILCS 5/23-105 new)

4 Sec. 23-105. Emissions standards for new building heating
5 and water heating appliances.

6 (a) On and after January 1, 2025, a person shall not sell,
7 install, offer for sale, lease, or offer for lease, and a
8 manufacturer shall not sell or distribute for sale or
9 installation, the following new products in this State:

10 (1) water heaters with a rated heat input capacity of
11 75,000 Btus per hour or less, and any water heaters with
12 power assist, that emit more than 10 nanograms of NO_x per
13 joule of heat output;

14 (2) water heaters and boilers with a rated heat input
15 capacity from 75,001 to 2,000,000 Btus per hour,
16 inclusive, that emit more than 14 nanograms of NO_x per
17 joule of heat output; or

18 (3) fan-type central furnaces with a rated heat input
19 capacity of 175,000 Btus per hour or less that emit more
20 than 14 nanograms of NO_x per joule of heat output.

21 (b) On and after January 1, 2030, a person shall not sell,
22 install, offer for sale, lease, or offer for lease, and a
23 manufacturer shall not sell or distribute for sale or
24 installation, the following new products in this State:

25 (1) water heaters and boilers with a rated heat input

1 capacity of 2,000,000 Btus per hour or less that emit more
2 than 0.0 nanograms of NO_x per joule of heat output; or

3 (2) furnaces with a rated heat input capacity of
4 175,000 Btus per hour or less that emit more than 0.0
5 nanograms of NO_x per joule of heat output. This includes
6 non-central installations, such as wall furnaces, as well
7 as units installed in non-residential applications.

8 (220 ILCS 5/23-106 new)

9 Sec. 23-106. Certification and identification of compliant
10 products.

11 (a) The manufacturer shall obtain confirmation from an
12 independent testing laboratory that each water heater, boiler,
13 or furnace model that is subject to the requirements of this
14 Article and that the manufacturer intends to sell or
15 distribute for sale or installation into the State has been
16 tested in accordance with the procedures in Section 23-107.
17 This confirmation shall include the following statement signed
18 and dated by the person responsible for the report at the
19 independent testing laboratory: "Based on my inquiry of those
20 individuals with primary responsibility for obtaining the
21 information, I certify that the statements and information in
22 this source test report are to the best of my knowledge and
23 belief true, accurate, and complete. I am aware that there are
24 significant civil and criminal penalties for submitting false
25 statements or information or omitting required statements or

1 information, including the possibility of fine or
2 imprisonment."

3 (b) For each such product model, the manufacturer shall
4 submit to the Director either of the following:

5 (1) A statement that each product model meets the
6 emission standards set forth in Section 23-105. The
7 statement must:

8 (A) provide the following general information:
9 name and address of manufacturer, brand name, trade
10 name, model number, and rated heat input capacity;

11 (B) provide a description of the model being
12 certified;

13 (C) include a complete certification source test
14 report demonstrating that the product model was tested
15 in accordance with procedures in Section 23-107 and a
16 written statement that the model complies with Section
17 23-105;

18 (D) include the following statement signed and
19 dated by a managerial level employee responsible for
20 the certification request at the manufacturer: "Based
21 on my inquiry of those individuals with primary
22 responsibility for obtaining the information, I
23 certify that the statements and information in this
24 request for certification are to the best of my
25 knowledge and belief true, accurate, and complete. I
26 am aware that there are significant civil and criminal

1 penalties for submitting false statements or
2 information or omitting required statements or
3 information, including the possibility of fine or
4 imprisonment.";

5 (E) be submitted to the Director no more than 90
6 days after the date of the emissions compliance test
7 conducted in accordance with Section 23-107; and

8 (F) be submitted to the Director no less than 90
9 days before the intention to sell or distribute a new
10 product model within the State or no less than 90 days
11 before the dates described in Section 23-105.

12 (2) An approved South Coast Air Quality Management
13 District (SCAQMD) certification for each product model
14 issued pursuant to SCAQMD Rules 1111, 1121, or 1146.2, to
15 demonstrate compliance with subsection (a) of Section
16 23-105.

17 (c) The manufacturer shall display the model number and
18 the certification status of a product complying with this
19 Article on the shipping carton and rating plate of each unit.

20 (220 ILCS 5/23-107 new)

21 Sec. 23-107. Determination of emissions. Emissions from
22 products subject to the requirements of this Article shall be
23 tested in accordance with the following provisions:

24 (1) Each product model shall receive certification
25 based on emission tests of a randomly selected unit of

1 that model.

2 (2) The measurement of NO_x emissions shall be
3 conducted in accordance with EPA Reference Method 7 (40
4 CFR Part 60, Appendix A), Test Methods 7A-7E.

5 (3) Each tested water heater shall be operated in
6 accordance with Section 2.4 of American National Standards
7 ANSI Z21.10.1-1990 at normal test pressure, input rates,
8 and with a 5-foot exhaust stack installed during the NO_x
9 emissions tests.

10 (4) Each tested furnace shall be operated in
11 accordance with the procedures specified in Section 3.1 of
12 the Code of Federal Regulations, Title 10, Part 430,
13 Subpart B, Appendix N.

14 (5) One of the 2 following formulas shall be used to
15 calculate the NO_x emission rate in nanograms of NO_x per
16 joule of heat output:

17 $N=4.566 \times 10^4 P U H C E$

18 or

19 $N=3.655 \times 10^{10} P^{20.9} Y Z E$

20 Where:

21 N = Calculated mass emissions of NO_x per unit of useful
22 heat (nanograms per joule of useful heat delivered to the
23 heated space).

24 P = Measured concentration of NO_x in flue gas (parts
25 per million by volume).

26 Y = Measured concentration of O₂ in flue gas

1 (percentage by volume).

2 Z = Gross heating value of gas (joules per cubic meter
3 at 0.0 degrees Celsius, 1 atm).

4 E = AFUE (percentage), as defined in Section 23-103.

5 U = Concentration of CO₂ in water-free flue gas for
6 stoichiometric combustion (percentage by volume).

7 H = Gross heating value of the fuel (Btu per cubic
8 foot, 60 degrees Fahrenheit, 30-in Hg).

9 C = Measured concentration of CO₂ in flue gas
10 (percentage by volume).

11 (220 ILCS 5/23-108 new)

12 Sec. 23-108. Enforcement and penalties.

13 (a) The Director may require the emission test results to
14 be provided when deemed necessary to verify compliance and may
15 periodically conduct on-site inspections and tests as are
16 deemed necessary to ensure compliance. Such verifications
17 shall be conducted at least once within 2 years of the date
18 described in subsection (a) of Section 23-105 and again at
19 least once every 5 years thereafter.

20 (b) If the Director determines that a manufacturer,
21 distributor, retailer, installer, or other person is in
22 violation of any provision of this Act, that violation is
23 subject to fines and penalties according to the Director's
24 authority.

25 (c) For purposes of this Section, fines or penalties may

1 be levied against an installer who installs a product covered
2 by this Article in violation of this Article, however they
3 shall not be levied against such installer's nonmanagerial
4 employees, if any, who perform such installation.

5 (d) Fines and penalties collected under this Section may
6 be used for supplemental environmental programs to offset the
7 cost of furnace and water heater replacements in low-income
8 and moderate-income households or households in environmental
9 justice communities, according to the Director's authority to
10 use fines and penalties.

11 (e) On or before the date described in subsection (a) of
12 Section 23-105, the Director shall establish a process whereby
13 individuals may anonymously report potential violations of
14 this Act. The Director shall investigate any such reported
15 potential violations.

16 (220 ILCS 5/23-109 new)

17 Sec. 23-109. Additional regulation. The Director may adopt
18 rules as necessary to ensure the proper implementation and
19 enforcement of this Article.

20 (220 ILCS 5/23-111 new)

21 Sec. 23-111. Revisions to building codes to comply with
22 greenhouse gas emissions reduction requirements.

23 (a) Beginning no later than July 1, 2025, to support the
24 State's achievement of its greenhouse gas emissions

1 requirements and to improve public health outcomes, the State
2 building code shall require that the site energy use intensity
3 between minimally compliant but otherwise similar buildings of
4 differing fuel types shall not be significantly unequal in all
5 new construction statewide. Beginning no later than July 1,
6 2025, to the fullest extent feasible, the building code shall
7 require that any area or service within a project where
8 infrastructure, building systems, or equipment used for the
9 combustion of fossil fuels are installed must be all-electric
10 ready.

11 (b) Requirements for all-electric ready new construction
12 for residential buildings shall include:

13 (1) a heat pump space heater ready. Systems using gas
14 or propane furnaces to serve individual dwelling units
15 shall include the following:

16 (A) a dedicated 240 volt branch circuit wiring
17 shall be installed within 3 feet from the furnace and
18 accessible to the furnace with no obstructions. The
19 branch circuit conductors shall be rated at 30 amps
20 minimum. The blank cover shall be identified as "240V
21 ready"; and

22 (B) the main electrical service panel shall have a
23 reserved space to allow for the installation of a
24 double pole circuit breaker for a future heat pump
25 space heater installation. The reserved space shall be
26 permanently marked as "For Future 240V use";

1 (2) an electric cooktop ready. Systems using gas or
2 propane cooktops to serve individual dwelling units shall
3 include the following:

4 (A) a dedicated 240 volt branch circuit wiring
5 shall be installed within 3 feet from the cooktop and
6 accessible to the cooktop with no obstructions. The
7 branch circuit conductors shall be rated at 50 amps
8 minimum. The blank cover shall be identified as "240V
9 ready"; and

10 (B) the main electrical service panel shall have a
11 reserved space to allow for the installation of a
12 double pole circuit breaker for a future electric
13 cooktop installation. The reserved space shall be
14 permanently marked as "For Future 240V Use";

15 (3) an electric clothes dryer ready. Clothes dryer
16 locations with gas or propane plumbing shall include the
17 following:

18 (A) systems serving individual dwelling units
19 shall include:

20 (i) a dedicated 240 volt branch circuit wiring
21 shall be installed within 3 feet from the clothes
22 dryer location and accessible to the clothes dryer
23 location with no obstructions. The branch circuit
24 conductors shall be rated at 30 amps minimum. The
25 blank cover shall be identified as "240V ready";
26 and

1 (ii) the main electrical service panel shall
2 have a reserved space to allow for the
3 installation of a double pole circuit breaker for
4 a future electric clothes dryer installation. The
5 reserved space shall be permanently marked as "For
6 Future 240V Use"; and

7 (B) systems in common use areas shall include
8 conductors or raceway shall be installed with
9 termination points at the main electrical panel, via
10 subpanels if applicable, to a location no more than 3
11 feet from each gas outlet or a designated location of
12 future electric replacement equipment. Both ends of
13 the conductors or raceway shall be labeled "Future
14 240V Use". The conductors or raceway and any
15 intervening subpanels, panelboards, switchboards, and
16 busbars shall be sized to meet the future electric
17 power requirements, at the service voltage to the
18 point at which the conductors serving the building
19 connect to the utility distribution system. The
20 capacity requirements may be adjusted for demand
21 factors. Gas flow rates shall be determined in
22 accordance with State plumbing code. Capacity shall be
23 one of the following:

24 (i) 0.24 amps at 208/240 volts per clothes
25 dryer;

26 (ii) 2.6 kVA for each 10,000 Btu per hour of

1 rated gas input or gas pipe capacity; or

2 (iii) the electrical power required to provide
3 equivalent functionality of the gas-powered
4 equipment as calculated and documented by the
5 responsible person associated with the project;
6 and

7 (4) a heat pump water heater ready. Systems using gas
8 or propane service water heaters to serve individual
9 dwelling units shall include the following:

10 (A) a dedicated 240 volt branch circuit wiring
11 shall be installed within 3 feet from the furnace and
12 accessible to the furnace with no obstructions. The
13 branch circuit conductors shall be rated at 30 amps
14 minimum. The blank cover shall be identified as "240V
15 ready";

16 (B) the main electrical service panel shall have a
17 reserved space to allow for the installation of a
18 double pole circuit breaker for a future heat pump
19 water heater installation. The reserved space shall be
20 permanently marked as "For Future 240V use"; and

21 (C) an indoor space that is at least 3 feet by 3
22 feet by 7 feet high shall be available surrounding or
23 within 3 feet of the installed water heater, except
24 where a tankless water heater is installed.

25 (c) Newly constructed commercial buildings shall meet the
26 requirements of Appendix CH of the 2024 version of the

1 International Energy Conservation Code.

2 (d) Beginning no later than January 1, 2026, the State
3 building code must include a prescriptive requirement for
4 central air conditioning systems that are being removed due to
5 equipment failure or as part of a larger renovation project,
6 that they must be replaced with a heat pump capable of both
7 heating and cooling in accordance with the following
8 requirements:

9 (1) Requirements for residential buildings:

10 (A) If an existing central air conditioner is
11 removed from a natural gas, propane, or fuel oil
12 forced air system that is to remain in place, the
13 replacement heat pump must be sized to meet the
14 cooling load of the home with controls allowing the
15 heat pump to provide the primary heating and furnace
16 as "backup" heating.

17 (B) If an existing central air conditioner is
18 connected to a natural gas, propane, or fuel oil
19 forced air system that is to also be replaced, the
20 replacement heat pump must be sized to meet all loads
21 of the home. Exceptions may be given for replacement
22 systems that require the main electrical service panel
23 to be upgraded.

24 (C) If an existing central air conditioner and its
25 accompanying ductwork are replaced, the replacement
26 heat pump must be sized to meet all loads of the home.

1 (2) Requirements for commercial buildings: If an
2 existing rooftop packaged unit is removed, the replacement
3 unit must be a heat pump. This requirement only applies to
4 existing rooftop packaged units that are 65,000 Btu/h or
5 less. Exceptions may be given for replacement systems that
6 require the main electrical service panel to be upgraded.

7 (220 ILCS 5/23-112 new)

8 Sec. 23-112. Revisions to gas service line extensions to
9 comply with greenhouse gas emissions reduction requirements.

10 (a) To support the State's achievement of its greenhouse
11 gas emissions requirements, and to improve public health
12 outcomes, no gas company may furnish or supply gas service,
13 instrumentalities, and facilities to any commercial or
14 residential location that did not receive gas service or did
15 not file applications for gas service on or before June 30,
16 2027.

17 (b) The following locations are exempt from the
18 requirements of subsection (a):

19 (1) buildings that require gas systems for emergency
20 backup power; and

21 (2) buildings specifically designated for occupancy by
22 a commercial food establishment, laboratory, laundromat,
23 hospital, or crematorium.

24 (220 ILCS 5/23-301 new)

1 Sec. 23-301. Severability. If any provision of this
2 Article or the application of this Article to any person or
3 circumstance is held invalid, such invalidity does not affect
4 other provisions or applications of the Article that can be
5 given effect without the invalid provision or application, and
6 to this end the provisions of this Article are declared to be
7 severable.

8 (220 ILCS 5/Art. XXIV heading new)

9 ARTICLE XXIV. 2050 HEAT DECARBONIZATION STANDARD

10 (220 ILCS 5/24-101 new)

11 Sec. 24-101. Legislative policy. To provide the highest
12 quality of life for the residents of this State and to provide
13 for a clean and healthy environment, it is the policy of this
14 State that natural gas utilities, otherwise referred to as
15 "obligated parties", shall transition to 100% zero emissions
16 by 2050. Under the heat decarbonization standard, each gas
17 utility has an annual obligation, beginning in 2030, to reduce
18 the greenhouse gas emissions resulting from the combustion of
19 the fuels it delivers to its customers. The emission reduction
20 obligation for 2030 shall be 20% relative to each utility's
21 2020 greenhouse gas emissions levels on a weather-normalized
22 basis. The emission reduction obligation shall grow by 4
23 percentage points per year every year thereafter, such that
24 the annual emission reduction requirement will reach 24% in

1 2031, 28% in 2032, 32% in 2033, 36% in 2034, 40% by 2035, 44%
2 by 2036, 48% by 2037, 52% by 2038, 56% by 2039, 60% by 2040,
3 64% by 2041, 68% by 2042, 72% by 2043, 76% by 2044, 80% by
4 2045, 84% by 2046, 88% by 2047, 92% by 2048, 96% by 2049, and
5 100% by 2050. This obligation shall be referred to as the "heat
6 decarbonization standard". The heat decarbonization standard
7 must be met by the lowest societal cost combination of supply
8 and demand-side resources. References in this Article to "this
9 Act" means this Article.

10 (220 ILCS 5/24-102 new)

11 Sec. 24-102. Options for compliance.

12 (a) Obligated parties must demonstrate compliance with the
13 heat decarbonization standard using a combination of:

14 (1) emission reductions achieved from the obligated
15 parties' own customers; and

16 (2) clean heat credits purchased from other gas
17 utilities that are also obligated parties in this State.

18 (b) Prior to 2035, at least 70% of each obligated party's
19 emission reduction obligation must be met through emission
20 reductions achieved from its own customers, with no more than
21 30% of the emission reduction obligation in any year met
22 through the purchase of clean heat credits. From 2035 through
23 2040, at least 80% of each obligated party's emission
24 reduction requirement must be met through emission reductions
25 from its own customers, with no more than 20% met through the

1 purchase of clean heat credits. After 2040, at least 90% of
2 each obligated party's emission reduction requirement must be
3 met through emission reductions achieved from its own
4 customers, with no more than 10% met through the purchase of
5 clean heat credits.

6 (220 ILCS 5/24-103 new)

7 Sec. 24-103. Measures for customer emission reduction.
8 Emissions must be achieved through improvements in customers'
9 energy conservation practices, improvements in customers'
10 end-use efficiency, full or partial electrification of any end
11 use, or switching from fossil methane to lower-emitting liquid
12 or gaseous fuels that are delivered by the obligated party and
13 directly consumed by end-use customers at the customers' homes
14 or businesses. Lower-emitting liquid or gaseous fuels may
15 include biomethane, but lower-emitting liquid or gaseous fuels
16 may not include hydrogen except for industrial applications.
17 For emission reductions from lower-emitting liquid or gaseous
18 fuels to be counted toward an obligated party's emission
19 reduction obligation, the obligated party must both acquire
20 the lower-emitting fuel, including its environmental
21 attributes, and demonstrate a contractual pathway for the
22 physical delivery of the fuel from the point of injection into
23 a pipeline to the obligated party's delivery system. Gas
24 utilities may not use reductions in emissions from sources
25 unrelated to combustion of fossil gas at customers' homes and

1 businesses in this State as emissions offsets or alternatives
2 to reductions in the customers' own emissions.

3 Obligated parties must meet the heat decarbonization
4 standard with the lowest societal cost combination of
5 resources, where societal cost includes infrastructure costs,
6 utility return on capital, the social cost of greenhouse gas
7 emissions and leakage, and the cost of health impacts
8 attributable to pollution from a given measure.

9 (220 ILCS 5/24-104 new)

10 Sec. 24-104. Demonstrating customer emission reductions.

11 (a) Each obligated party's emissions in each year shall be
12 calculated as:

13 (1) a weather-normalized estimate of emissions from
14 the actual amount of fossil methane consumed by its
15 customers in the year, plus;

16 (2) a weather-normalized estimate of emissions from
17 the leakage of methane, hydrogen, or other greenhouse
18 gases from front or behind-the-meter sources in a given
19 year, plus;

20 (3) a weather-normalized estimate of the magnitude of
21 remaining emissions resulting from switching from fossil
22 methane to lower-emitting liquid or gaseous fuels that are
23 delivered by the obligated party and directly consumed by
24 customers at the customers' homes or businesses in the
25 year. The magnitude of remaining emissions resulting from

1 switching from fossil methane to lower-emitting liquid or
2 gaseous fuels shall be calculated as (i) the magnitude of
3 emissions that would have occurred had fossil methane
4 continued to be consumed, multiplied by (ii) one minus the
5 percent reduction in life cycle emissions resulting from
6 the fuel substitution. Life cycle emission calculations
7 shall account for emissions associated with the entire
8 pathway of a fuel, including extraction, production,
9 transportation, distribution, and combustion of the fuel
10 by the consumer.

11 (b) Obligated parties shall calculate these figures
12 annually, and electronically submit the figures in an easily
13 accessible digital format, such as .PDF, .DOCX, or XLSX, to
14 the Environmental Protection Agency, the Commission, the
15 Governor, and the General Assembly.

16 (c) The Environmental Protection Agency shall post these
17 figures for each utility on a website readily accessible to
18 the public, within 30 days of obligated parties submitting the
19 figures to the Agency, and shall maintain all previous years'
20 records for similar public access.

21 (d) The Environmental Protection Agency shall also assess
22 the emissions figures submitted by obligated parties to assess
23 those parties' compliance or lack thereof with the heat
24 decarbonization standard. If an obligated party does not
25 comply, the obligated party shall be subject to enforcement
26 mechanisms described in Section 24-108.

1 (220 ILCS 5/24-105 new)

2 Sec. 24-105. Tradable clean heat credits. A tradable clean
3 heat credit is a tradable, intangible commodity that
4 represents an amount of greenhouse gas reduction, measured in
5 tons of CO₂, achieved by a gas utility from its customers in
6 this State. An obligated party must achieve excess emission
7 reductions, over and above its annual obligation, to sell
8 tradable clean heat credits to another obligated party. The
9 number of tradable clean heat credits sold by an obligated
10 party in any year may not exceed the magnitude of the obligated
11 party's excess emission reductions in that year.

12 (220 ILCS 5/24-106 new)

13 Sec. 24-106. Banking of emission reductions. An obligated
14 party that achieves emission reductions in a given year that
15 are in excess of its emission reduction obligation in that
16 year may, in lieu of selling them to another obligated party,
17 bank them. Emission reductions that are banked in a given year
18 may be used to comply with emission reduction obligations in
19 any of the following 3 years. Excess emission reductions may
20 not be banked for more than 3 years or used as part of an
21 obligated party's annual compliance more than 3 years after
22 they were generated. No obligated party may achieve more than
23 20% of any annual emission reduction obligation using banked
24 emission reductions.

1 (220 ILCS 5/24-107 new)

2 Sec. 24-107. Equity in emission reductions.

3 (a) As used in this Section:

4 "Equity investment eligible communities" has the meaning
5 given to that term in the Energy Transition Act.

6 "Income-qualified households" means those households whose
7 annual incomes are at or below 80% of the area median income.

8 (b) Each obligated party must achieve real emission
9 reductions from income-qualified households and environmental
10 justice communities that are at least 5 percentage points
11 greater than a proportional percentage of the annual gas
12 consumption of such customers multiplied by each obligated
13 party's annual emissions reduction requirements. At least half
14 of the emission reductions from equity investment eligible
15 communities shall be from measures that require capital
16 investments in homes, have expected lives of at least 10
17 years, and are estimated to lower annual energy bills.
18 Emission reductions in equity investment eligible communities
19 shall include codelivery and coordinated implementation of all
20 relevant programs, measures, and complementary services. This
21 includes, but is not limited to, pairing high efficiency
22 electrification measures and programs with energy efficiency,
23 building envelope improvements, the Illinois Solar for All
24 Program, energy assistance, health and safety improvements,
25 and federal incentives targeted to disadvantaged communities.

1 Emission reductions from income-qualified and environmental
2 justice communities, including efforts to codeliver and
3 coordinate other programs and services, shall be reported on
4 at least annually to the Commission. Tradable clean heat
5 credits cannot be used to fulfill this requirement.

6 (220 ILCS 5/24-108 new)

7 Sec. 24-108. Enforcement.

8 (a) The Commission shall order an obligated party that
9 fails to achieve its emission reduction obligation in a given
10 year, including required amounts from income-qualified
11 customers and front-line communities, to make a noncompliance
12 payment. The noncompliance payment shall be equal to 3 times
13 the estimated cost per unit of emission reduction incurred by
14 all obligated parties in the State for the emission reductions
15 the obligated parties achieved in the prior year.

16 (b) The Commission may waive the noncompliance payment if:

17 (1) it finds that the obligated party made a good
18 faith effort to achieve the required amount of emission
19 reduction and its failure to achieve the required
20 reduction resulted from market factors beyond its control,
21 that could not have reasonably been anticipated, and for
22 which the obligated party could not have planned; and

23 (2) it directs the obligated party to add the
24 difference between its obligated level of emission
25 reduction and actual emission reduction achieved to its

1 required emission reduction amount in subsequent years,
2 with the shortfall being made up in no more than 3 years.

3 (c) Payments received pursuant to the noncompliance
4 penalty shall be directed to the Commission.

5 (d) The Commission shall use any noncompliance payments to
6 contract with an independent third party to achieve emission
7 reductions in the service territory of the noncomplying
8 utility. The Commission shall prioritize achieving such
9 reductions from weatherization or electrification of
10 income-qualified households, to the extent that such
11 reductions would lower annual energy bills.

12 (220 ILCS 5/24-109 new)

13 Sec. 24-109. 2050 Heat Decarbonization Pathways Study.

14 (a) In order to ensure sufficient planning for achieving
15 this goal, the Commission shall complete a 2050 Heat
16 Decarbonization Pathways Study by June 1, 2025, to examine
17 feasible and practical pathways for investor-owned natural gas
18 utilities to achieve the State's decarbonization requirement
19 to be net zero by 2050, and the impacts of decarbonization on
20 customers and the electric and natural gas utilities that
21 serve the customers.

22 (b) The Commission shall host the study in collaboration
23 with a technical working group whose members are appointed by
24 the Governor and a consultant selected by the technical
25 working group. The Commission and technical working group

1 shall host a public process for stakeholder input regarding
2 (i) the proposed scope of the study, (ii) initial draft
3 assumptions for the study, (iii) draft study results, and (iv)
4 the draft study report. The technical working group shall
5 consist of the following members:

6 (1) one representative of natural gas utilities;

7 (2) one representative of electric utilities;

8 (3) the chair of the Commission, or the chair's
9 designee;

10 (4) one representative of the Office of
11 Decarbonization Planning within the Illinois Commerce
12 Commission;

13 (5) one representative of the Environmental Protection
14 Agency;

15 (6) one representative of an environmental advocacy
16 group;

17 (7) one representative of a labor organization;

18 (8) one representative of commercial and industrial
19 gas customers;

20 (9) one representative of an organization that
21 represents residential ratepayer advocates;

22 (10) one representative of a group that represents
23 environmental justice or front-line communities;

24 (11) one representative of a group that represents
25 low-income residents;

26 (12) one representative of an organization that

1 focuses on access to and promotion of energy efficiency;

2 and

3 (13) one climate scientist from a national laboratory
4 or institution of higher education in the State.

5 (c) The 2050 Heat Decarbonization Pathways Study shall
6 consider:

7 (1) future clean heating strategies for residential,
8 commercial, and industrial customers, including
9 electrification, geothermal heat and thermal networks, and
10 energy efficiency that would comply with each gas
11 utility's obligation under the heat decarbonization
12 standard;

13 (2) a comparative assessment of the marginal
14 greenhouse gas abatement cost curve of resources and
15 technologies, including electrification, that are
16 available for helping the utility meet its heat
17 decarbonization standard requirements;

18 (3) how a reduction in natural gas and other
19 utility-delivered gaseous fuels throughput will impact
20 customer gas and electric rates, considering various price
21 scenarios for electricity, natural gas, and other gaseous
22 fuels and reference medium and high electrification
23 scenarios;

24 (4) strategies to ensure equitable prioritization of
25 decarbonization measures and programs in income-qualified
26 and environmental justice communities while minimizing

1 energy transition costs on ratepayers, with an emphasis on
2 an accessible and affordable transition for low-income
3 residents, fixed-income residents, and residents within
4 equity investment eligible communities;

5 (5) an assessment of demand-side resource potential,
6 including load management, energy efficiency,
7 conservation, demand response, and fuel switching,
8 including electrification, available federal, State,
9 county, local, and private incentives, or financing
10 options related to building electrification and
11 efficiency;

12 (6) that the federal incentives analysis must include
13 ways that investor-owned utilities can leverage rebates
14 and tax incentives in the Inflation Reduction Act and
15 Infrastructure Investment and Jobs Act; in addition, the
16 assessment must include ways for the investor-owned
17 utilities to maximize low-income qualified households'
18 participation in the electrification incentive programs;

19 (7) the impacts of building and vehicle
20 electrification on the electric grid and strategies to
21 integrate gas and electric system planning and resource
22 optimization;

23 (8) specific natural gas end uses that may be suitable
24 for the use of alternative fuels, such as biomethane and
25 green hydrogen, and an assessment of the natural gas end
26 uses' commercial availability, social cost, and life cycle

1 emissions;

2 (9) a comparative evaluation of the cost of natural
3 gas purchasing strategies, storage options, delivery
4 resources, and improvements in demand-side resources using
5 a consistent method to calculate cost-effectiveness; and

6 (10) an evaluation of employment metrics associated
7 with each alternative, including a projection of gas
8 distribution jobs affected by a given alternative and jobs
9 made available through the alternative, a description of
10 opportunities to transition any affected gas distribution
11 jobs to the alternative, and an explanation of how
12 employment impacts associated with each alternative could
13 affect equity investment eligible communities. Given its
14 findings, the study will create a Just Transition Plan,
15 inclusive of funding needs, for the current gas workforce.

16 (d) The Chair of the Commission, or the Chair's designee,
17 will also serve as the Chair of the Technical Working Group.

18 (220 ILCS 5/24-110 new)

19 Sec. 24-110. Gas infrastructure planning.

20 (a) This Article creates the Office of Decarbonization
21 Planning within the Commission to manage an iterative
22 statewide heat decarbonization plan located within the
23 Commission. On a timeline concurrent with the 2050 Heat
24 Decarbonization Pathways Study, the Office of Decarbonization
25 Planning shall adopt rules for implementing the heat

1 decarbonization plans.

2 (b) As used in this Section:

3 "Environmental justice communities" has the meaning given
4 to that term in the Illinois Power Agency Act.

5 "Lowest reasonable cost" means the least-cost, least-risk
6 mix of demand-side, supply-side, and electrification resources
7 determined through a detailed and consistent analysis of a
8 wide range of commercially available sources. At a minimum,
9 this analysis must consider resource costs, resource
10 availability, market-volatility risks, the risks imposed on
11 ratepayers, resource effect on system operations, public
12 policies regarding resource preferences, the cost of risks
13 associated with environmental effects, including emissions of
14 carbon dioxide, the ability to scale to meet 2050 goals, air
15 pollution and resulting public health impacts, equity impacts,
16 and the need for security of supply.

17 "Planned project" means any programmatic expense or
18 related group of programmatic expenses with a defined scope of
19 work and associated cost estimate that exceeds \$1,000,000 in
20 2020 dollars or \$500,000 in 2020 dollars for gas utilities
21 with less than 50,000 full service customers, as adjusted
22 annually for inflation.

23 "Resources" means both demand-side and supply-side
24 resources, including, but not limited to, natural gas,
25 biomethane, green hydrogen for industrial application,
26 conservation, energy efficiency, demand response, and

1 electrification.

2 (c) Each natural gas utility regulated by the Commission
3 has the responsibility to meet system demand and public policy
4 requirements, including the State's heat decarbonization
5 standard, with the lowest reasonable cost and most feasible
6 mix of resources. In furtherance of that responsibility, each
7 natural gas utility must develop a gas infrastructure plan for
8 meeting the utility's heat decarbonization standard, including
9 5-year interim milestones from 2025 until 2050. The gas
10 infrastructure plan must take into account the findings of the
11 2050 Heat Decarbonization Pathways Study.

12 (d) Natural gas utilities shall file biennial gas
13 infrastructure plans that create alignment between gas utility
14 distribution system investments and the utility's heat
15 decarbonization standard obligations at lowest reasonable cost
16 and that consider nonpipeline infrastructure projects that
17 minimize costs over the long term.

18 (e) Before the filing of each biennial gas infrastructure
19 plan, the Office of Decarbonization Planning shall contract
20 for gas demand forecasts for each regulated gas utility in the
21 State from an independent party. Gas utilities must reasonably
22 provide accurate and timely system data to the independent
23 contractor selected to conduct the forecasts. For each
24 regulated gas utility in the State, the third party must
25 produce forecasts for each customer class that consider slow,
26 medium, and rapid acceleration of residential, commercial, and

1 industrial electrification of the end uses that rely upon the
2 direct combustion of natural gas in buildings. The forecasts
3 must include, to the extent possible, the effects of updated
4 State and local building codes, changes to the number of gas
5 utility customers, consumer responses to building
6 electrification programs or incentives offered within a gas
7 utility's service territory, the price elasticity of gas
8 demand if rates increase due to reduced gas throughput and the
9 impacts of commodity prices, and any other criteria as
10 stipulated by the Commission. The forecasts shall be due to
11 the Commission and the gas utilities at least 8 months prior to
12 the filing of a gas infrastructure plan.

13 (f) A gas infrastructure plan must:

14 (1) cover the 20 years immediately following the
15 approval of the plan with a 5-year action plan of
16 investments;

17 (2) provide the estimated total cost and annual
18 incremental revenue requirements of the proposed action
19 plan, assuming both conventional depreciation and
20 accelerated depreciation, as applicable;

21 (3) use the various gas demand forecasts provided to
22 it under this article and include a range of possible
23 future scenarios and input sensitivities for the purpose
24 of testing the robustness of the utility's portfolio of
25 planned projects under various parameters;

26 (4) take into account the findings of the 2050 Heat

1 Decarbonization Pathways Study;

2 (5) demonstrate that the utility's infrastructure
3 investment plans align with obligations under the heat
4 decarbonization standard;

5 (6) include a list of all proposed system expenditures
6 and investments, including an analysis of infrastructure
7 needs and detailed information on all planned projects
8 within the action plan;

9 (7) include the results of nonpipeline alternative
10 analyses conducted for all planned projects not necessary
11 to mitigate a near-term safety or reliability risk subject
12 to rules by the Commission that include, but are not
13 limited to:

14 (A) a consideration of both supply and demand-side
15 alternatives to traditional capital investments,
16 including gas demand response and electrification; and

17 (B) a cost-benefit analysis of the various options
18 that consider non-energy benefits and the societal
19 value, including health benefits, of reduced carbon
20 emissions and surface-level pollutants, particularly
21 in equity investment eligible communities;

22 (8) minimize rate impacts on customers, particularly
23 low-income households and households within equity
24 investment eligible communities;

25 (9) describe the methodology, criteria, and
26 assumptions used to develop the plan;

1 (10) include one or more system maps indicating
2 locations of individual planned projects, pressure
3 districts served by the individual project, locations of
4 equity investment eligible communities, and any other
5 information as required by the Commission;

6 (11) provide a summary of stakeholder participation
7 and input from a public stakeholder process, and an
8 explanation of how input was incorporated into the plan,
9 including for all projects located within equity
10 investment eligible communities, a description of its
11 outreach to members of that community and findings from
12 those efforts; and

13 (12) requires the utility, to the extent that the
14 utility assumes the use of alternative fuels, such as
15 biomethane or green hydrogen, to meet its obligations
16 under the heat decarbonization standard, to demonstrate a
17 plan to procure firm supply and cost-effectiveness as
18 compared to nonfuel alternatives, inclusive of the costs
19 to retrofit all public and private infrastructure to
20 accommodate the fuels; green hydrogen may only be used for
21 industrial applications; hydrogen blending with methane
22 shall not be part of decarbonization plans.

23 (g) Not later than 12 months before the due date of a plan,
24 the utility must provide a work plan for the Commission to
25 review. The work plan must outline the content of the resource
26 plan to be developed by the utility, the method for assessing

1 potential resources, and the timing and extent of public
2 participation. In addition, the Commission will hear comments
3 on the plan at a minimum of 3 public hearings, held at times
4 and locations accessible and convenient to most people,
5 including at least one in an equity investment eligible
6 community, which are scheduled after the utility submits its
7 plan for Commission review.

8 (h) No later than July 1, 2025, gas utilities in this State
9 must file the first gas infrastructure plan application for
10 approval. The Commission may approve, deny, or require
11 modifications to the plan. Once approved, the plan must be
12 incorporated into the utility's next general rate case using
13 the approved ratemaking treatments. Deviations based on
14 unforeseen circumstances must be justified and approved by the
15 Commission.

16 (i) The Commission shall adopt new rules, amend existing
17 rules, as necessary, and dedicate sufficient resources to
18 implement this Section.

19 (220 ILCS 5/24-111 new)

20 Sec. 24-111. Study on gas utility financial incentive
21 reform.

22 (a) The General Assembly finds that:

23 (1) Improving the alignment of gas utility customer
24 interests, State policy, and company interests is critical
25 to ensuring the expected decline in the use of natural gas

1 is done efficiently, safely, cost-effectively, and
2 transparently.

3 (2) There is urgency around addressing increasing
4 threats from climate change and assisting communities that
5 have borne disproportionate impacts from climate change,
6 including air pollution, greenhouse gas emissions, and
7 energy burdens. Addressing this problem requires changes
8 to the energy used to power homes and businesses, and
9 changes to the gas utility business model under which
10 utilities in the State have traditionally functioned.

11 (3) Gas utility ratepayers may face upwardly spiraling
12 bills if steps are not taken to contain costs and
13 strategically prune parts of the gas distribution network.

14 (4) There is a need to encourage gas utilities to
15 innovate and find new lines of business to maintain
16 financial health as their main business, the provision of
17 fossil natural gas, winds down.

18 (5) The current regulatory framework has encouraged
19 infrastructure programs that have been plagued by
20 excessive cost overruns and delays.

21 (6) Discussions of performance incentive mechanisms
22 must always take into account the affordability of
23 customer rates and bills via stakeholder input.

24 The General Assembly, therefore, directs the Commission to
25 reform the gas utility financial incentives structure to
26 further specified goals and objectives related to the

1 provision of clean, affordable heat and the advancement of an
2 equitable distribution of benefits and reduction in harms in
3 equity investment eligible communities and economically
4 disadvantaged communities.

5 (b) The Commission shall open an investigation to consider
6 performance-based ratemaking tools and other financial
7 mechanisms to advance the goals of affordability, equity,
8 pollution reduction, energy system flexibility and
9 electrification, reliability, safety, customer experience,
10 cost-effectiveness, and the financial health of gas utilities
11 as the gas utilities scale down their core business of
12 delivering fuel-based energy through the distribution network.
13 The investigation shall consider the following mechanisms, in
14 addition to any others that the Commission or stakeholders
15 deem necessary:

16 (1) accelerated and shortened depreciation schedules;

17 (2) performance metrics and benchmarking;

18 (3) revenue decoupling;

19 (4) cost-recovery options for nonpipeline
20 alternatives;

21 (5) electrification;

22 (6) networked geothermal systems;

23 (7) securitization;

24 (8) fuel-cost sharing;

25 (9) multiyear rate plans;

26 (10) performance incentive mechanisms;

1 (11) the equalization of capital and operational
2 expenditures;

3 (12) return on equity levels for different investment
4 types;

5 (13) rate designs at the electric and gas nexus;

6 (14) low-income rates;

7 (15) luxury gas rates; and

8 (16) intersectoral cost recovery.

9 (c) The Commission must create a framework to evaluate
10 each mechanism on its own and as part of a set of mechanisms to
11 achieve the policy objectives determined by the General
12 Assembly, stakeholders, and the general public after a minimum
13 of 3 public hearings held at times and locations accessible
14 and convenient to most people, including at least one in an
15 equity investment eligible community.

16 (d) The investigation shall consist of a series of
17 workshops facilitated by an independent consultant that
18 encourages representation from diverse stakeholders, ensures
19 equitable opportunities for participation, and does not
20 require formal intervention or representation by an attorney.

21 (e) Any recommendations at the conclusion of the process
22 must be shared with the General Assembly, and those
23 recommendations already within the Commission's existing
24 authorities must be adopted in the next applicable general
25 rate case or relevant filing.

1 (220 ILCS 5/24-112 new)

2 Sec. 24-112. Reporting requirements.

3 (a) Each gas utility in the State must report data to the
4 Commission in January and July of each year that satisfy
5 metrics that are set by the Commission to assess, on a system,
6 segment, and neighborhood basis, the level of system safety
7 and risk. The metrics must include, but are not limited to, the
8 following:

9 (1) the overall average leak rate of replaced and
10 to-be-replaced mains and leak-prone pipes;

11 (2) the overall average leak rate using only
12 leak-prone pipe and current leaks;

13 (3) the neighborhood average leak rate using only
14 remaining leak-prone pipes and current leaks; and

15 (4) the neighborhood historic average leak rate using
16 leaks on leak-prone pipes for the past 2 years, on a
17 rolling basis, normalized for weather, and incorporating
18 all class 2 leaks except third-party damage.

19 (b) Gas utilities must include in the report an assessment
20 of whether the actions taken in the prior 3 years produced the
21 best value, in terms of risk reduction, for the amounts
22 expended and a prediction of how planned projects will change
23 risk levels on a neighborhood, segment, and system basis. The
24 report filed by Peoples Gas Light and Coke Company must also
25 include updates on steps taken to implement the
26 recommendations of the Final Report on Phase One of an

1 Investigation of Peoples Gas Light and Coke Company's AMRP.
2 The Commission may require any other gas utility to adopt new
3 and revised practices and processes by Peoples Gas Light and
4 Coke Company to ensure consistency across utilities.

5 (c) In its review of the data and metrics provided, the
6 Commission may order adjustments in infrastructure replacement
7 plans as it deems necessary to meet an acceptable level of risk
8 at appropriate cost.

9 (220 ILCS 5/Art. XXV heading new)

10 ARTICLE XXV. STATE NAVIGATOR PROGRAM LAW

11 (220 ILCS 5/25-101 new)

12 Sec. 25-101. Short title. This Article may be cited as the
13 State Navigator Program Law. References in this Article to
14 "this Act" mean this Article.

15 (220 ILCS 5/25-102 new)

16 Sec. 25-102. Intent. The General Assembly finds that
17 improving the energy efficiency of, and reducing the
18 greenhouse gases from, residential buildings are critical to
19 meeting the State's adopted climate goals in Public Act
20 102-662.

21 The General Assembly recognizes that making information
22 about energy efficiency and weatherization programs,
23 electrification services, skilled contractors, and federal and

1 State electrification incentives available to State residents
2 will assist the State in meeting its adopted climate goals in
3 Public Act 102-662. Further, the General Assembly recognizes
4 that establishing a comprehensive statewide navigator program
5 is essential to ensuring equitable access to electrification
6 and energy efficient services. This program requires the
7 Administrator to help educate residents on how to combine
8 local, State, federal, and utility services related to
9 electrification, energy efficiency, and the reduction of
10 energy burdens to maximize electrification and energy
11 efficiency in this State.

12 (220 ILCS 5/25-103 new)

13 Sec. 25-103. Definitions. As used in this Article:

14 "Administrator" means an entity, including, but not
15 limited to, a nonprofit corporation or community-based
16 organization. "Administrator" does not include an energy
17 utility.

18 "Customers" means residents, tenants, homeowners, and
19 building owners.

20 "Department" means the Department of Commerce and Economic
21 Opportunity.

22 "Electrification services" includes energy audits,
23 assistance converting to on-site renewable energy, electric
24 load service center upgrades, new electric wiring, installing
25 electric heat pumps and heat pump water heaters, cooking

1 equipment, clothes dryers, and other electric appliance
2 replacement, financing, energy efficiency, weatherization,
3 health and safety improvements, and any energy upgrade
4 services and work.

5 "Equity investment eligible communities" has the meaning
6 given to that term in Section 5-5 of the Energy Transition Act.

7 "Income-qualified households" means those whose annual
8 incomes are at or below 80% of area median income.

9 "Navigator Working Group" means representatives appointed
10 by the Department who represent members from either the
11 electrician trades, construction industry, community
12 organizations that work in energy burdened communities,
13 community organizations who have experience with
14 weatherization programs, members from equity investment
15 eligible communities or the Illinois Commerce Commission or
16 staff, electric utilities, and other stakeholders deemed
17 necessary by the Administrator.

18 (220 ILCS 5/25-104 new)

19 Sec. 25-104. Creation of State navigator program.

20 (a) The Department may establish and oversee a statewide
21 building energy upgrade navigator program. The purpose of the
22 navigator program is to provide a statewide resource to assist
23 building owners and building renters with accessing
24 information about electrification services, energy efficiency
25 services, programs, funding, and any other assistance that

1 will result in aiding the State in meeting its adopted climate
2 goals in Public Act 102-662. This includes, but is not limited
3 to, utility programs, the weatherization assistance program,
4 solar for all, federal funding and financing, and State and
5 local funding and financing.

6 (b) The Department must coordinate and collaborate with
7 the navigator working group on the design, administration, and
8 implementation of the navigator program.

9 (c) The Department must ensure that all State residents
10 have equitable access to the navigator program.

11 (d) The Department may consult with other programs,
12 entities, and stakeholders as the Department determines to be
13 appropriate on the design, administration, and implementation
14 of the navigator program. The department must solicit public
15 feedback on design and implementation decisions from
16 stakeholders.

17 (e) Third-Party Administrator.

18 (1) The Department may contract out this program to
19 the Administrator. Subject to the following requirements:

20 (A) The Administrator must be selected through a
21 competitive process.

22 (B) The Administrator must have experience with
23 running statewide programs related to energy
24 efficiency, electrification services, or
25 weatherization programs.

26 (C) The Administrator must have experience working

1 with multifamily building owners and renters.

2 (D) The Administrator must have experience
3 assisting people with low incomes or energy burdened
4 households.

5 (E) The Administrator must have experience running
6 programs in both urban and rural parts of the State,
7 including covering a range of geographic and community
8 diversity.

9 (2) If the Department decides to hire an
10 Administrator, they must enter into a contract within a
11 year of the effective date of this amendatory Act of the
12 104th General Assembly.

13 (3) If the Department decides to hire an
14 Administrator, the contract expires after 4 years. After 4
15 years, the Department can renew the contract or select a
16 different Administrator. If the Administrator is not
17 meeting the requirements of the program and its
18 participants, the contract may be terminated early, and a
19 new Administrator may be hired.

20 (4) The Administrator shall have the same
21 responsibilities as the Department in creating,
22 overseeing, and implementing the programs in the navigator
23 program.

24 (f) The Department or Administrator of the navigator
25 program must:

26 (1) provide outreach to:

- 1 (A) owner occupied and rental residences; and
2 (B) single-family and multifamily dwellings;
3 (2) provide coverage for all geographic regions in the
4 State;
5 (3) create strategies to ensure that the navigator
6 program prioritizes outreach in equity investment eligible
7 communities;
8 (4) create a strategy for how the navigator program
9 will equitably assist residents in accessing rebates and
10 incentives in the federal Inflation Reduction Act;
11 (5) create a strategy for how the navigator program
12 will assist customers in accessing State funding
13 opportunities available to access electrification
14 services;
15 (6) create a strategy to stack funding from all
16 available incentives and tax rebates that may leverage
17 existing State software where possible with the goal of
18 creating a single interface for clients to access
19 information about weatherization, energy efficiency, and
20 electrification services;
21 (7) support the integrated implementation of all
22 relevant clean building programs funded in the State
23 budget, including, but not limited to:
24 (A) the Low Income Home Energy Assistance Program;
25 and
26 (B) the Illinois Home Weatherization Assistance

1 Program; and
2 (8) maintain a recommended contractor list.

3 (220 ILCS 5/25-105 new)
4 Sec. 25-105. Education materials and outreach. The
5 Department or Administrator shall:

6 (1) create educational materials, which must include:

7 (a) information about all relevant funds and
8 financial assistance available from federal, State,
9 local, and energy utility programs, including, but not
10 limited to, incentives, rebates, tax credits, grants,
11 and loan programs; and

12 (b) information for households on the economic,
13 health, climate, and safety benefits of eligible
14 retrofits.

15 (2) support and connect community-based organizations
16 in their region to training programs in areas of
17 electrification, energy efficiency, building envelope, and
18 installation technical assistance, and other relevant
19 areas; and

20 (3) ensure the education and outreach work is
21 coordinated with other State energy efficiency,
22 weatherization, electrification, and related programs and
23 providers.

24 Section 99. Effective date. This Act takes effect upon
25 becoming law.
